

4600 SERIES

- 6 power levels: 3, 6, 12, 18, 24 & 36 kW
- CC, CR, CV, CP, SC, UPF and CNL emulation modes
- Programmable crest factor and power factor
- 12 high-accuracy, internal measurements
- User-defined waveforms
- 100-step Multi-Mode Macros
- PC softpanel with current, voltage and power waveform display
- Single and 3-phase configuration options
- RS-232 and USB communication interfaces

APPLICATION

4600 AC Loads are design for test applications that require linear and non-linear AC loading in several emulation modes with power and crest factors control. This programmable versatility allows testing with a wide variety of potential field operating conditions to assure unit-under-test (UUT) reliability. Products tested include uninterruptible power supplies (UPS), AC sources, inverters, switches, circuit breakers, fuses and connectors.

EMULATION MODES

To provide testing under the broadest range of loading conditions, the 4600 Series offers 7 different emulation modes. Constant Current (CC) mode provides current to be drawn constantly, making it suitable for non-linear, linear and regulation loading. While Constant Resistance (CR) mode allows the load to emulate a power resistor, Constant Voltage (CV) allows emulating a shunt regulator. Constant Power (CP) mode emulates a constant-power load such as a switching power supply. The Short Circuit (SC) mode allows the load to test the UUT's short circuit protection capability. Unity Power Factor (UPF) mode causes power factor to be as close as possible to unity, useful when the input voltage is non-sinusoidal. The new Complex Non-Linear Waveform (CNL) Mode allows the user to define the waveform to prevent UUT current overstressing in the event of a voltage collapse. These comprehensive capabilities provide the user almost every conceivable AC loading condition.

USER-DEFINED WAVEFORMS

The 4600 has the ability to control current through a user-defined waveform. The waveform is created by a powerful graphical editor that facilitates starting with a straight line or modifying a generated waveform based on current, power and crest factor. The graphical editor includes an auto-check feature to ensure the settings are compatible with each other and within the capabilities of the load. It also supports waveform smoothing, symmetrical and asymmetrical waveform creation.

With this editor, waveforms can be quickly created to duplicate complex transient conditions. This would include adding asymmetrical inflections, inserting transient anomalies such as spikes and dropouts, and just about anything else that can be drawn as a single-cycle waveform.

100-STEP MULTI-MODE MACROS

Macros are queues of up to 100 steps that can be triggered locally, thereby providing very fast current, power and crest factor changes, up to every cycle. Further, a Macro can be executed as a single shot or looped.

em POWER LE TEST EXECUTIVE OPTION

The 4600 is supplied with software for a PC softpanel that provides complete instrument control, measurement and waveform display. Upgrading to a full test executive with drivers for all NHR power instruments is also possible through *emPower LE*, which adds a test sequencer, basic test routines, and reporting.

User-Defined Asymmetrical Current Waveshape

2.000 mS/div
Wf1, Chn 001, 100 V/div.
Wf2, Chn 002, 20 A/div

Start-Up Inrush Current Macro

10.000 mS/div
Wf1, Chn 001, 100 V/div.
Wf2, Chn 002, 20 A/div

HIGH ACCURACY MEASUREMENTS

The 4600 Series provides high-accuracy frequency, voltage, peak voltage, current, peak current, crest factor, apparent power, true power, peak power, reactive power, power factor and resistance measurements by combining high-resolution measurements with precision ranging. The ability to make measurements internally eliminates multiple external measurement instruments plus associated signal matrixing. In this manner the 4600 provides for a more compact, less costly and considerably faster test system.

WIDE RANGE OF POWER LEVELS

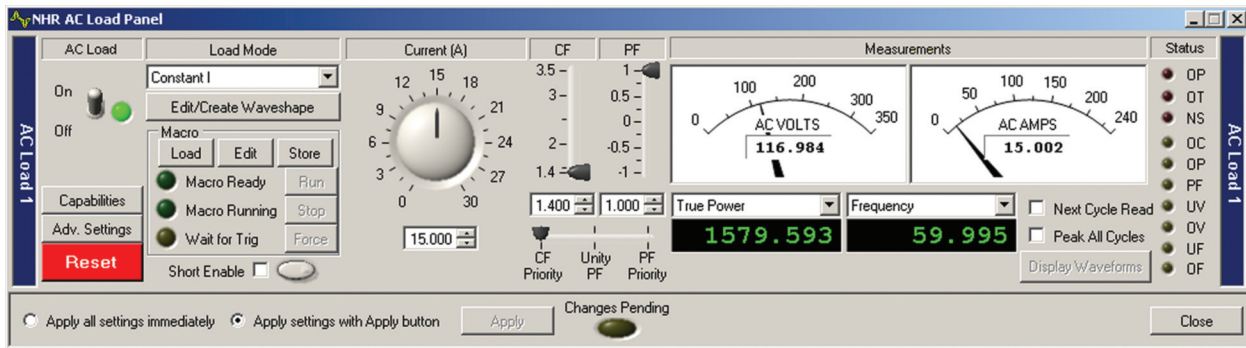

The 4600 Series is now offered in 6 power levels between 3 and 36 kW. Any unit can be field expandable in 3 kW increments to address future higher power needs. Contact factory for loads higher than 36 kW.

GRAPHIC USER INTERFACE

A PC-hosted graphic user interface eclipses the traditional front panel clutter of knobs, dials, keypads, and digital displays that are carry-over from a time of test instrumentation with a far more limited set of features. In addition to a more comprehensive presentation of operation, measurement and status information, softpanel advantages include the ability to program and recall Macros, editing of user-defined waveforms along with display of real-time current, voltage and power waveforms without an oscilloscope.

PC SOFT PANEL

PANEL OVERVIEW

- | | | |
|--------------------------|-------------------------------|----------------------------|
| 1. Control Power switch | 5. Address switch | 9. Hold In/Out connectors |
| 2. Fault indicator light | 6. Trig In/Out connectors | 10. RS 232 connector |
| 3. Load Power switch | 7. Chassis GND stud | 11. COMM In/Out connectors |
| 4. Status indicators | 8. Load Power Input connector | 12. AC input connector |

Control	
User Interface	PC soft panel
PC	3 GHz μ P with 512 MB RAM, SVGA display, 80 GB HD
OS	Window XP
Test Executive	Optional <i>emPower</i> TM LE
Communications	RS-232, USB option
Drivers	NI LabVIEW, IVI, Active X
Additional Features	
3-Phase Operation	Provides for control of 3 individual units (for example, 3kVA units for a total of 9kVA, 6kVA units for a total of 18 kVA) to simulate a 3-phase load
Remote Voltage Sense	1 MegaOhm impedance, 2 VDC max drop between sense and load input
Self Test	Power-up self test of all major functions including status of input, output, control and protection circuits
Performance Monitoring	Continuous checking of performance parameters and appropriate error messages and/or LED fault indicators
Calibration	Closed cover, all adjustments made in software and stored in FLASH
Protection	OP, OC, OV, OT, and Undervoltage Lockout
Trigger Output	To initiate an external measurement device and synchronized to programmed load current step
Fan Noise Reduction	Automatic fan speed control
Load Connectors	ITT Cannon DCM-21WA4P/DM 53745-1 plug & socket
Operating Temperature	0 - 50° C, maximum continuous and peak power derated 20% above 38° C
Input Power	115/230 \pm 10% VAC, 47 - 63 Hz

¹Specifications apply at 23* \pm 5* C after a 10 minute warm up and are subject to change without notice.

All Accuracies and Resolutions are % of full scale

²Higher power and custom configurations available

³Accuracies apply when Settings and/or Measurements >10% of Range
