- 8561E 30 Hz to 6.5 GHz**
- 8562E 30 Hz to 13.2 GHz**

- 8564E 30 Hz to 40 GHz**
- 8565E 30 Hz to 50 GHz**

Unless noted, all specifications describe the instruments' warranted performance under the following conditions: 5-minute warm-up from ambient conditions, autocoupled controls, digital display, IF ADJ ON, REF LVL CAL adjusted, SECOND IF OUTPUT and 1ST LO OUTPUT terminated in 50 Ω. After a 30-minute warm-up, and over a temperature range of 20 °C to 30 °C, the preselector does not have to

be peaked at each signal of interest; under these conditions factory preselector peak values are sufficient to meet all specifications. Typical performance is nonwarranted. Supplemental characteristics are denoted by "nominal" and "approximately"; these constitute nonwarranted functional performance information derived during the design process and are not tested on a continuing basis.
