Agilent Technologies VQT Undercradle – J4630A

Technical Specification

Telephony Interfaces

Analog FXO

Number of ports: 2

Connector: RJ12 modular jack

Limit Loop Current: variable

Signaling: supports analog loop and ground start

Accuracy of transmission

or reception of sine wave: +/- 1 dBm under conditions: 300 Hz to 3400 Hz;

-3 dBm to -50 dBm

Analog E & M

Number of ports: 2

Connector: RJ45 modular jack

Addressing: Delay-dial, Immediate-start, Wink-start

Signaling: Type I, II, III, V

Transmission: two-wire, four wire operation

Accuracy of transmission

or reception of sine wave: +/- 1 dBm under conditions: 300 Hz to 3400 Hz;

-3 dBm to -45 dBm

Physical

Dimensions

 Height:
 4.44 cm. (1.75 in.)

 Length:
 31.11 cm. (12.25 in.)

 Width:
 29.84 cm. (11.75 in.)

 Weight:
 1.52 Kg. (3.35 lbs.)

Platform

The VQT Undercradle is designed to work attached to the Agilent Advisor WAN (J2300D/E) or Agilent Advisor LAN (J3446D/E)

Regulatory compliances

CSA, CE, C-Tick

Feature Summary

- Distributed VQT software allows client software for PC control of remote VQT Servers.
- Delay (one-way and roundtrip)
- Clarity using PESQ (ITU P.862)
- Clarity File using PESQ applied off-line to audio files
- Clarity Trending using PESQ (trending results on multiple repetitions)
- Clarity using PAMS
- Clarity File using PAMS applied off-line to audio files
- Clarity Trending using PAMS (trending results on multiple repetitions)
- Clarity using PSQM+ (enhanced version of ITU P.861)
- Clarity File using PSQM+ applied off-line to audio files
- Clarity Trending using PSQM+ (trending results on multiple repetitions)
- Clarity Distributed One-Way Measurements for PAMS and PSQM+ measurements.
- Over 150 voice samples in 9 languages for testing Japanese, English-North America, English/Britain, French, German, Spanish, Chinese/Beijing (Mandarin) and Chinese/Canton (Cantonese).
- Echo PACE (Perceived Annoyance Caused by Echo)
- Signal loss measurement
- Echo Double-Talk (measures performance during two-way conversation)
- DTMF twist and attenuation
- Voice Activity Detector: front-end clipping, hold-over time, and comfort noise generation
- Remote Audio Playback Tool
- Path confirmation
- Impulse response
- Network Simulator
- Automated Testing
- $\bullet \;$ Interactive Testing
- Pre-defined task lists
- Single, repeat, and continuous test modes
- End-to-end and round-trip measurements
- File Play and Record
- Noise Generator
- Tone Generator
- Port loopback
- Colorful, graphical presentation of test results
- Audio monitor
- Log files of results and configurations
- Active log viewing
- Full graphical viewing of saved test logs

Delay

Description: Measures transmission delay of VF signal from

source port to destination port (end-to-end), and from source port to destination port to

source port (round-trip).

Test signal: MLS

Gain applied to test signal: -40dBm to 0dBm Audio path: end-to-end, roundtrip

Measurement iterations: single, repeat, and continuous

Max iterations: 1440
Max measurement window: 2 seconds
Resolution: 1 millisecond

User-set thresholds: maximum delay, minimum delay

Measurements: minimum delay, maximum delay, average delay, last delay, duration, max threshold

exceeded, below min threshold, duration, tests

completed, timeouts

Graph: delay (over entire duration of transmission),

max threshold, min threshold, summary, last

measurement made

Clarity (PESQ)

Description: Measures perceptual quality of voice transmitted

across a network

Measurement Standard: ITU P.862 Perceptual Evaluation of Speech Quality

Test Signal: Natural voice

Audio Path: Local one-way and local round-trip;

distributed one-way and distributed round-trip Single (use Clarity Trending for multiple iterations)

Measurement Iterations: Single (use Clarity Trending for multiple iter User-set thresholds: PESQ Listening Quality (LQ) score

Reported Results: PESQ Listening Quality (LQ) PESQ threshold,

Average Symmetrical Disturbance, Average Asymmetrical Disturbance, estimated delay

Graphical Results: Symmetrical Disturbance, Asymmetrical Disturbance,

Error Surface, transmitted signal, received signal

Description: Performs PESQ measurement in multiple iterations

for trending data. Adheres to Clarity (PESQ) specification, with the following exceptions:

Clarity Trending (PESQ) Measurement Iterations: repeat n times or continuous

Maximum Iterations: 1440

User-set thresholds: PESQ Listening Quality (LQ) score

Reported Results: Average PESQ LQ score, last PESQ LQ score, High

PESQ LQ score, Low PESQ LQ score, Overall Average

Symmetrical Disturbance, Overall Average Asymmetrical Disturbance, average estimated

delay

Graphical Results: PESQ LQ score per iteration, average PESQ LQ score,

minimum PESQ LQ score, maximum PESQ LQ score

Clarity File (PESQ)

Description: Performs offline Clarity (PESQ) measurement for pre-recorded

audio files. Adheres to Clarity (PESQ) specification.

Clarity (PSQM+)

Description: Measures perceptual quality of voice

transmitted across a network

Measurement Standard: PSQM+, an enhancement to the ITU

P.861recommendation for Perceptual Speech

Quality Measurement (PSQM)

Test Signal: Natural voice

Audio Path: Local one-way and local roundtrip, distributed

one-way and distributed roundtrip

Measurement Iterations: Single (user Clarity Trending for multiple

iterations)

Measurement Resolution: 0.01 PSQM+

User-set Thresholds: maximum PSQM

maximum PSQM+, average PSQM+, outliers

percentage

Reported Results: average PSQM+, average PSQM+ threshold

exceeded, maximum PSQM+, maximum PSQM+ threshold exceeded, outliers percent age, outliers percentage threshold exceeded, PSQM+ standard deviation, MOS equivalent, delay logg(toin correlation timeseut

delay, loss/gain, correlation timeout reference signal, received signal, PSQM+

scoring over time, maximum PSQM+

threshold

Clarity Trending (PSQM+)

Description: Performs Clarity (PSQM+) measurement in

multiple iterations for trending data. Adheres to Clarity (PSQM+) specification, with the

following exceptions:

Measurement Iterations: repeat n times or continuous

Maximum Iterations: 1440

Graphical Results:

User-set Thresholds: overall average PSQM+, maximum average

PSQM+ outliers percentage

Reported Results: Results are reported against the average

PSQM+ score for each iteration: overall average PSQM+, overall average PSQM+ threshold exceeded, last average PSQM+, high average PSQM+, low average PSQM+, average outliers percentage, average outliers percent age threshold exceeded, average delay, average loss/gain, test duration, tests completed, correlation timeouts

Graphical Results: average PSQM+ per iteration, maximum

PSQM+ per iteration, average PSQM+ threshold, outliers percentage per iteration,

 $outliers\ percentage\ threshold$

Clarity File (PSQM+)

Description: Performs offline Clarity (PSQM+)

measurement for pre-recorded audio files. Adheres to Clarity (PSQM+) specification.

Clarity (PAMS)

Description: Measures perceptual quality of voice

transmitted across a network

Measurement Standard: Perceptual Analysis Measurement System

(PAMS)

Test Signal: Artificial speech, natural voice

Audio Path: Local one-way and local roundtrip, distributed

one-way and distributed roundtrip.

Measurement Iterations: Single (user Clarity Trending for multiple

iterations)

Measurement Resolution: 0.01 LQS, 0.01 LES

User-set Thresholds: Reported Results:

Listening Quality Score, Listening Effort Score Listening Quality Score, Listening Effort Score, Listening Quality Score threshold exceeded, Listening Effort Score threshold exceeded,

correlation timeout

Graphical Results: Error surface, reference signal waveform,

degraded signal waveform

Clarity Trending (PAMS)

Description: Performs Clarity (PAMS) measurement in

multiple iterations for trending data. Adheres to Clarity (PAMS) specification, with the

following exceptions:

repeat n times or continuous

 ${\bf Measurement\ Iterations:}$

Maximum Iterations:

User-set Thresholds: Reported Results:

Listening Quality Score, Listening Effort Score average LQS, minimum LQS, maximum LQS, average LES, minimum LES, maximum LES,

LQS threshold exceeded, LES threshold exceeded, test duration, tests completed,

correlation timeouts

Graphical Results: LQS, average LQS, minimum LQS, maximum

LQS, LQS threshold, LES, average LES, minimum LES, maximum LES, LES threshold

Clarity File (PAMS)

Description:

Performs offline Clarity (PAMS) measurement

for pre-recorded audio files. Adheres to

Clarity (PAMS) specification

Echo – PACE (PSQM)

Description:

Measures echo received during and after transmission of voice, and the Perceived Annoyance Caused by Echo (PACE)

Test Signal: Natural voice

Audio Path: End-to-end, roundtrip with network echo

simulation

Measurement Iterations: Single

Measurement Resolution: 0.01 PSQM+, 1 msec echo duration, 1 msec

echo delay

User-set Thresholds: Average PSQM+, maximum PSQM+,

percentage of echo-free speech, outliers $\,$

percentage

Reported Results: Average PSQM+, average PSQM+ threshold

exceeded, maximum PSQM+, maximum PSQM+ threshold exceeded, percentage of echo-free speech, percentage of echo-free speech threshold exceeded, outliers percentage, outliers percentage threshold exceeded, duration of echo in speech, duration of echo in silence, echo delay,

correlation timeout

Graphical Results: Reference signal, received echo signal, echo-

in-speech duration, echo-in-silence duration, PSQM+ scoring over time, maximum PSQM+

threshold

Echo – PACE (PESQ)Description:
Measures echo received during and after

transmission of voice, and the Perceived Annoyance Caused by Echo (PACE)

Test Signal: Natural Voice

Audio Path: End-to-end, roundtrip with network echo

simulation

Measurement Iterations: Single

Measurement Resolution: 0.01 PESQ LQ, 1 msec echo duration, 1 msec

echo delay

User-set Thresholds: Average PESQ LQ, maximum PESQ LQ,

percentage of echo-free speech, outliers

percentage

Reported Results: Average PESQ LQ, average PESQ LQ threshold

exceeded, maximum PESQ LQ, maximum PESQ LQ exceeded, percentage of echo-free speech, percentage of echo-free speech threshold exceeded, outliers percentage, outliers percentage threshold exceeded, duraction of echo in speech, duration of echo in silence, echo delay, Average Symmetrical

Disturbance, Average Asymmetrical Disturbance, correlation timeout.

Graphical Results: Reference signal, received echo signal, echo

in speech duration, echo in silence duration,

Symmetrical Frame Disturbance, Asymmetrical Frame Disturbance

Echo – Doubletalk Description: Measures performance of echo cancelers

under conditions of Doubletalk

Test Signal: Natural voice

Audio Path: End-to-end in both directions

Measurement Iterations: Single
Measurement Resolution: 0.01 PSQM+

User-set Thresholds: Average PSQM+, maximum PSQM+, outliers

percentage

Reported Results: Average PSQM+, average PSQM+ threshold

exceeded, maximum PSQM+, maximum PSQM+ threshold exceeded, outliers percentage, outliers percentage threshold

exceeded, correlation timeout

Graphical Results: Reference signal, doubletalk signal, received

signal, PSQM+ scoring over time, maximum

 $PSQM+\ threshold$

Echo - Doubletalk (PESQ)

Description: Measures performance of echo cancelers

under conditions of Doubletalk.

Test Signal: Natural Voice

Audio Path: End-to-end in both directions

Measurement Iterations: Single

 $\begin{array}{ll} \mbox{Measurement Resolution:} & 0.01 \mbox{ PESQ LQ} \\ \mbox{User-set Thresholds:} & \mbox{Average PESQ LQ} \end{array}$

Reported Results: Average PESQ LQ, Average PESQ LQ

threshold exceeded, Average Symmetrical Disturbance, Average Asymmetrical Disturbance, corrolation timeout Reference signal, doubletalk signal,

received signal, Symmetrical Frame Disturbance,

Asymmetrical Frame Disturbance

Signal Loss

Description: Measures the mean loss or gain of an audio

signal transmitted across the system under test. The mean loss or gain is computed by comparing the average received signal level in dB with the average reference signal level

in dB

Test Signal: Natural voice, white noise, and a single

frequency tone. White noise and tone signals may be selected in the range of -40 to 0 dBm and a tone signal has a selectable frequency

range from 400 to $3400\ \mathrm{Hz}$

Audio Path: End-to-End, roundtrip

Measurement Iterations: Single Measurement Resolution: 0.01 dB.

User-set Thresholds: signal loss\gain threshold (dB)
Reported Results: mean signal loss\gain in dB, signal loss

threshold exceeded, correlation timeout

Graphical Results: reference signal, received signal

Impulse Response

Description: Measures and records the I/O transfer

function of a network by transmitting test signal and measuring individual delays and amplitudes of time-segmented received signal. Records function as polynomial coefficients to

be used in Network Simulator.

Test signal: MLS
Audio path: end-to-end
Measurement iterations: single
Max measurement window: 2 seconds
Maximum FIR taps: 100

Resolution: 1 millisecond User-set thresholds: max delay threshold

Measurements: impulse response (saved to IR file), max delay

threshold exceeded, last delay, loss/gain,

timeout

Graph: delay and amplitude of received signal (over

entire duration of transmission)

DTMF Tone

Description: Measures impact of system under test on

DTMF signal transmissions, in terms of twist,

attenuation, and frequency response.

Test signal: DTMF (1 to 16 signals)

Audio path: end-to-end Measurement iterations: single

Amplitude Resolution: 0.1 dB (range = -30 to -6)

User-set thresholds: twist threshold (max and min amplitudes)
Measurements: twist, low-freq tone amplitude, high-freq tone

amplitude, low-freq tone frequency shift, high-

freq tone frequency shift, timeout.

Graph: frequency response, low-freq tone marker, high-freq tone marker, low-freq tone amplitude

marker, high-freq tone amplitude marker.

Voice Activity Detector

Description: Measures the impact of a VAD on a VF signal in

terms of front-end clipping and hold-over time.

MLS

Gain applied to

Test signal:

test signal: -30db to -5 db Test signal duration: 100 to 5000 msec

Gain applied to

tracer signal:

Audio path:

Measurement iterations:

Max correlation window:

Resolution:

-60db to -20db
end-to-end
single
2 seconds
1 msec

Measurements: Front-end clipping, hold-over time, transmitted

signal duration, received signal duration received signal amplitude, received signal

Graph: received signal amplitude, received signal frequency spectrum, pulse start marker, VAD open marker, pulse end marker, VAD close

marker.

File Play and Record

Description: Transmits a user-selected audio file on one

port, records the received signal on another port and saves to audio file. Tone and/or noise may be added to audio file transmission.

Gain applied to transmitted file: -60db to 60db

Measurement iterations: single, repeat, continuous

Network Simulator (Analog Only)

Description: Simulates a previously tested network by

applying the impulse response file to a test signal. Gain, delay, tone, and/or noise may be

added to test signal.

Gain applied to test signal: -60db to 60 db Delay applied to test signal: 11 to 1000 msec

Noise Generator

Description: Transmits noise signal over selected port.

Signal: MLS

Signal duration: not limited
Gain applied to signal: -60db to 0db

Tone Generator Description: ${\bf Transmits\ single-frequency\ tone\ over\ selected}$

port.

Tone duration: not limited Gain applied to signal: -60db to 0db

Audio Monitor Selectable source \mathbf{S}

port monitoring modes: transmit, receive, transmit and receive, none

Selectable destination

port monitoring modes: transmit, receive, transmit and receive, none

Selectable remote audio

monitor modes:

and automatically play", none.

Record, "record and upload", "record, upload,

Controlling PC Hardware Requirements

Minimum Configuration

CPU: Pentium[®] 3 200 MHz Memory: 64 MBytes Hard Disk: 100 MB

Screen Resolution: 800x600

TCP/IP Stack: Microsoft's built-in TCP/IP stack

Supported OS's: Windows[®] 98 SE, Windows[®] NT 4.0 SP 5, Windows 2000[®]

Recommend Configuration

CPU: Pentium[®] 3 500 MHz Memory: 128 MBytes Hard Disk: 100 MB

Screen Resolution: 1024x768

TCP/IP Stack: Microsoft's built-in TCP/IP stack

Supported OS's: Windows $^{@}98$ SE, Windows $^{@}$ NT 4.0 SP 5, Windows $2000^{@}$

Operating Conditions

Temperature

Operating: $+5^{\circ}\text{C}$ to $+40^{\circ}\text{C}$ ($+41^{\circ}\text{F}$ to $+104^{\circ}\text{F}$) Non-operating: -25°C to $+60^{\circ}\text{C}$ (-13°F to $+140^{\circ}\text{F}$)

Humidity

Operating: 20% to 80% relative humidity, non-condensing Non-operating: 5% to 90% relative humidity, < 40°C, non-condensing 5% to 80% relative humidity, > 40°C, non-condensing

Altitude

Operating: 4570 meters (15,000 feet) Non-operating: 12,200 meters (40,000 feet)
