TORKEL 820

Battery Load Unit

- **Batteries can be tested “in service”**
- **Unit adjusts to include load currents in the test parameters**
- **User adjustable alarm and shutdown points to avoid excessive discharge**
- **Easily expandable for larger battery banks using TXL extra load units**
- **View test parameters/results “real time” as testing progresses using TORKEL WIN software**
- **Easily save results to a PC for analysis, report generation and storage**

Description

During a power outage, crucial telecommunication and radio equipment must be kept operating by batteries. However, the capacity of such batteries can drop significantly for a number of reasons before their calculated life expectancy is reached. Battery capacity should thus be checked to prevent expensive downtime in the event of a power failure.

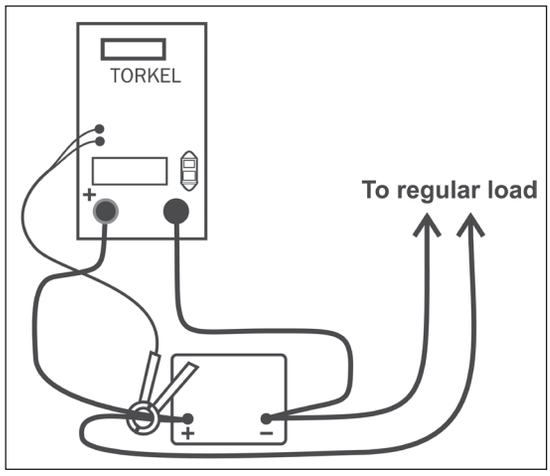
The most reliable way to determine battery capacity is to conduct a discharge test. The TORKEL™820 features a unique design that combines efficiency with portability. Using TORKEL 820 you can discharge 24 and 48 V batteries at a current of 270 A, and 12 V batteries at 135 A. Moreover, two or more TORKEL 820 units and/or extra load units, TXL, can be linked together if you need higher current. Discharging proceeds at constant current, constant power or constant resistance, or in accordance with a pre-selected load profile.

The TORKEL 820 issues a warning and/or shuts down the test automatically when a) the voltage has dropped to a certain level, b) discharging has continued through a certain time interval or c) a certain amount of capacity has been dissipated.

Application example

Testing can be carried out without disconnecting the battery from the equipment it serves. Via a DC clamp-on ammeter, TORKEL 820 measures total battery current while regulating it at a constant level.

The TORKEL 820 is connected to battery, the current and the voltage alarm level are set. After starting the discharge TORKEL 820 keeps the current constant at the preset level. When the voltage drops to a level slightly above the final voltage, TORKEL 820 issues an alarm. The total voltage curve and the readings taken at the end of the test are stored in TORKEL 820. Later, using the TORKEL Win program, you can transfer these readings to your computer for storage, printout or export. If your PC is connected to TORKEL 820 during the test, TORKEL Win builds up a voltage curve on the screen in real time and displays the current, voltage and capacity readings. You can also control the test using TORKEL Win.



Features and benefits

1. Display
2. External measurement input used to measure current in an external path by means of a clamp-on ammeter or a current shunt.
3. Keys for operation and settings.
4. Alarm output equipped with a relay contact for triggering an external alarm device.
5. Start/Stop input used for starting and stopping discharging from an external device. Galvanically isolated.
6. Indicating lamps. Operating, Stop/Limit
7. TXL output used for control of TXL Extra Loads. Galvanically isolated.
8. Serial port used for connection to a PC or other controlling equipment.
9. Voltage controlled circuit breaker that connects / disconnects the loading circuits in TORKEL from the battery.
10. Positive current connection for battery being tested.
11. Input for sensing voltage at the battery terminals.
12. Negative current connection for battery being tested.
13. Mains connector, equipped with ON/OFF switch.

Application examples with TORKEL/ TXL systems

TORKEL and TXL can be combined into systems to match up for different battery capacities. These resistive extra loads do not perform any regulating functions. They are designed for use together with TORKEL Battery Load Units. Their purpose is to provide higher load currents for use in constant current or constant power tests. Together, TORKEL and the TXL Extra Loads form a system that can discharge batteries with currents of up to several kA. TXL Extra Loads are connected directly to the battery, and TORKEL measures the total current using a clamp-on ammeter.
TXL Extra Loads are shut down automatically when TORKEL is stopped.

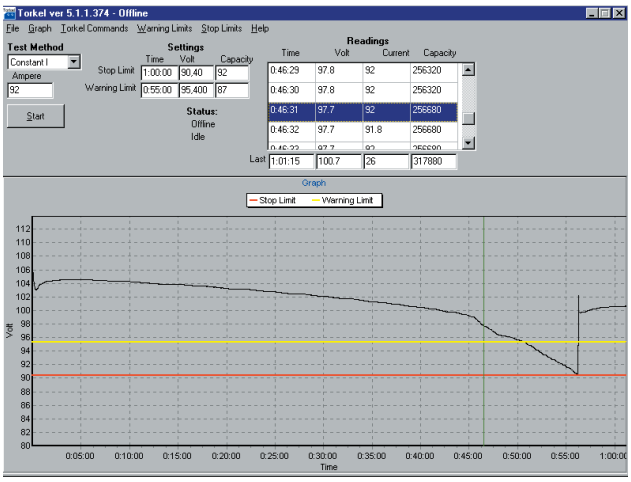
Additional equipment

TORKEL Win



- Shows the complete voltage curve
- Last recorded time, voltage, current and discharged capacity
- Scroll-window for all recorded values
- Remote control of TORKEL
- Report functions

Clamp-on-ammeters

- Clamp-on ammeters, 200 A DC and 1000 A DC
- To measure current in circuit outside TORKEL

Extra loads

- There are two extra loads available, TXL830 and TXL850

BVM

- Automates battery voltage measurement during capacity tests
- "Daisy-chain" design allows expandability up to 120 units
- High accuracy and stability for precise data collection
- Integrates with TORKEL Win and PowerDB Test Data Management software
- For complete information see BVM data sheet
