# **SMARTS AMC**

# **AREA MONITOR COMPACT**

# **User's Manual**

EQUIPMENT SERIAL NUMBER

You can find the Serial Number on the rear panel of the main unit and on the side of the wall support bracket.

Serial Number is in the form: 0000X00000.

The first four digits and the letter are the Serial Number prefix, the last five digits are the Serial Number suffix. The prefix is the same for identical instruments, it changes only when a configuration change is made to the instrument. The suffix is different for each instrument.

#### NOTE:

® Names and Logo are registered trademarks of Narda Safety Test Solutions GmbH - Trade names are trademarks of the owners.

# CAUTION

If the instrument is used in any other way than as described in this User's Manual, it may become unsafe.

Before using this product, the related documentation must be read with great care and fully understood to familiarize with all the safety prescriptions.

To ensure the correct use and the maximum safety level, the User shall know all the instructions and recommendations contained in this document.

# WARNING

This product is a Safety Class III instrument according to IEC classification and has been designed to meet the requirements of EN61010-1 (Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use).

In accordance with the IEC classification, the power supply of this product meets requirements Safety Class II and Installation Category II (having double insulation and able to carry out mono-phase power supply operations).

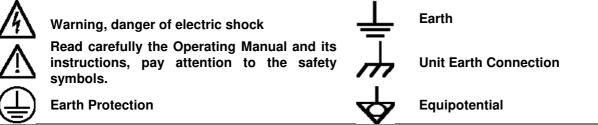

It complies with the requirements of Pollution Class II (usually only non-conductive pollution). However, occasionally it may become temporarily conductive due to condense on it.

The information contained in this document is subject to change without notice.

#### **EXPLANATION OF ELECTRICAL AND SAFETY SYMBOLS :**

You now own a high-quality instrument that will give you many years of reliable service. Nevertheless, even this product will eventually become obsolete. When that time comes, please remember that electronic equipment must be disposed of in accordance with local regulations. This product conforms to the WEEE Directive of the European Union (2002/96/EC) and belongs to Category 9 (Monitoring and Control Instruments). You can return the instrument to us free of charge for proper environment friendly disposal. You can obtain further information from your local Narda Sales Partner or by visiting our website at www.narda-sts.it .

#### EXPLANATION OF SYMBOLS USED IN THIS DOCUMENT

The DANGER sign draws attention to a serious risk to a person's safety, which, if not avoided, will result in death or serious injury. All the

WARNING

precautions must be fully understood and applied before proceeding.

The WARNING sign indicates a hazardous situation, which, if not avoided, could result in death or serious injury. All the precautions must be fully understood and applied before proceeding.

The CAUTION sign indicates a hazardous situation, which, if not avoided, could result in minor or moderate injury.

The NOTICE sign draws attention to a potential risk of damage to the apparatus or loss of data.

The NOTE sign draws attention to important information.

## **A WARNING** SAFETY RECOMMENDATIONS AND INSTRUCTIONS

This product has been designed, produced and tested in Italy, and it left the factory in conditions fully complying with the current safety standards. To maintain it in safe conditions and ensure correct use, these general instructions must be fully understood and applied before the product is used.

- When the device must be connected permanently, first provide effective grounding;
- If the device must be connected to other equipment or accessories, make sure they are all safely grounded;
- In case of devices permanently connected to the power supply, and lacking any fuses or other devices of mains protection, the power line must be equipped with adequate protection commensurate to the consumption of all the devices connected to it;
- In case of connection of the device to the power mains, make sure before connection that the voltage selected on the voltage switch and the fuses are adequate for the voltage of the actual mains;
- Devices in Safety Class I, equipped with connection to the power mains by means of cord and plug, can only be plugged into a socket equipped with a ground wire;
- Any interruption or loosening of the ground wire or of a connecting power cable, inside or outside the device, will cause a potential risk for the safety of the personnel;
- Ground connections must not be interrupted intentionally;
- To prevent the possible danger of electrocution, do not remove any covers, panels or guards installed on the device, and refer only to NARDA Service Centers if maintenance should be necessary;
- To maintain adequate protection from fire hazards, replace fuses only with others of the same type and rating;
- Follow the safety regulations and any additional instructions in this manual to prevent accidents and damages.

# Dichiarazione di Conformità EU Declaration of Conformity

In accordo alla Decisione 768/2008/EC, conforme alle direttive RED 2014/53/UE, EMC 2014/30/UE, Bassa Tensione 2014/35/UE e RoHS 2011/65/UE, ed anche alle norme ISO/IEC 17050-1 e 17050-2. In accordance with the Decision 768/2008/EC, compliant to the Directives RED 2014/53/EU, EMC 2014/30/EU, Low Voltage 2014/35/EU and RoHS 2011/65/EU, also compliant to the ISO/IEC standard 17050-1 and 17050-2.

# 1 – General information

1.1 Documentation	<ul> <li>The following documents are included in this Manual:</li> <li>A questionnaire to be sent to NARDA together with the apparatus should service be required.</li> <li>A checklist of the accessories included in the shipment.</li> </ul>
	In addition to the software delivered with the AMC, the communication and control protocol is freely available so users can fully control the Area Monitor Compact with their usual test software (see Chapter 10). The MAC address assigned by the manufacturer is located externally on one side of the Wall bracket

Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

General information

The Area Monitor Compact can be installed wall mounted by bracket or suitable for ground installation with the provided Tripod AMC support and the option TR-02A or upside-down if ceiling mounted (see Chapter 2).

### 1.3 Standard

#### accessories

- Standard accessories included with AMC Area Monitor Compact:
- Main unit
- USB Cable USB(A)/USB(C), 2 m long
- AC/DC Converter with plug adapters
- Cable, FO Duplex, RP-02/10, 10 m long
- USB-OC Optical Converter
- AMC Interface
- Wall support bracket
- Radome AMC
- Tripod AMC support
- 2.5mm and 3mm Allen Key
- Tool Kit of screws and washers
- Expansion plugs
- Software Media including User's Manual
- Certificate of Calibration

## 1.4 Optional

accessories

AMC accessories supplied separately (on charge):

- Cable, DB15(m)/DB15(m), 1,8 m
- Ethernet cable, 5 m
- Cable, FO Duplex, RP-02/20, 20 m long
- Cable, FO Duplex, RP-02/40, 40 m long
- TR-02A Tripod complete with joint
- Carrying case
- Power Over Ethernet injector
- EP-1B-09 E-Field Probe
- EP-1B-10 E-Field Probe
- EP-1B-11 E-Field Probe
- EP-1B-12 E-Field Probe
- EHP-2B-05 E and H-Field Shaped Probe
- EHP-2B-06 E and H-Field Shaped Probe
- EHP-2B-07 E and H-Field Shaped Probe
- EHP-2B-08 E and H-Field Shaped Probe

- 5. ON/OFF button

#### **General information**

1.7.1 DB-15 User's Port and application example

The SMARTS AMC Area Monitor Compact is also equipped with DB-15 (HD-15) connector for the Programmable User's Port.

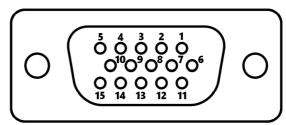

Fig. 1-4 Programmable User's Port HD-15 female connector pinout

6

+5 Volt power out

- 1 GND
- 2 OUT4 N.C Relay
- 3 OUT4 Com. Relay
- 4 OUT4 N.O. Relay
- 5 OUT3 Com. Relay
- 7 OUT2 Collector8 OUT1 Collector9 N.A
- 13 N.A 14 N.A

11 OUT2 Emitter

12 OUT1 Emitter

10 OUT3 N.C Relay

Relay 15 N.A

There are two optocoupled outputs (OUT1 and OUT2) and two relais output (OUT3 and OUT4).

Then there is a +5 V, 150 mA max protected output supply, and a ground pin.

Please, refer to the ?AMCk\* and SAMCk para\* command on the chapter 10 of this manual for the status and settings of the DB-15 User's port.

Input and output signals of the User's Port are optocoupled or relais protected and can be used to control external devices or to trigger measurements under specific conditions.

When the command **SAMCR para\*** is enabled in presence of an alarm the port OUT3 (pin 5 and 10) and port OUT4 (pin2 and 3) of relay are normally closed. The pin 3 and 4 (OUT4) shows a normally open contact of the same relay.

Port OUT1 (pin 8 and 12) and OUT2 (pin7 and 11) are connected to the collector and emitter of the BJT of optocoupler. When the command **SAMC1 para\*** is enabled in presence of an alarm the port OUT1 (pin 8 and 12) are closed in the same way the command **SAMC2 para\*** close the port OUT2 (pin 7 and 11).

Typical examples are when interfacing: position sensors, movement sensors, interlock etc. Another example could be the activation of an external powerful alarm siren.

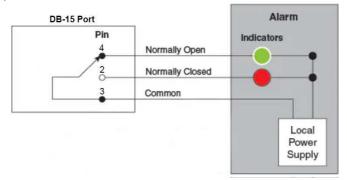

Fig. 1-5 User's Port application example

#### **1.8 Field Probes**

The following list shows the Field probes designed for SMARTS AMC Area Monitor Compact

TABLE 1-2 Technical Specifications of SMARTS Area Monitor Compact Field Probes		
Field Probe	Range of frequency	Reading
ELECTRIC FIELD PROBE EP-1B-09	100 kHz – 8 GHz	0.2 – 200 V/m
ELECTRIC FIELD PROBE EP-1B-10	300 kHz – 40 GHz	0.5 – 800 V/m
ELECTRIC FIELD PROBE EP-1B-11	100 kHz – 12.5 GHz	0.2 – 200 V/m
ELECTRIC FIELD PROBE EP-1B-12	300 kHz – 18 GHz	0.5 – 800 V/m
ELECTRIC AND MAGNETIC FIELD	E: 500 kHz – 9.25 GHz	E: 0.1 (0.5) – 1000 %
SHAPED PROBE EHP-2B-05	H: 20 MHz – 1 GHz	H: 0.3 (1.5) – 1000 %
ELECTRIC AND MAGNETIC FIELD SHAPED PROBE EHP-2B-06	E: 500 kHz – 60 GHz	E: 0.1 (0.5) – 1000 %
	H: 20 MHz – 1 GHz	H: 0.3 (1.5) – 1000 %
ELECTRIC AND MAGNETIC FIELD	E: 1.34 MHz – 9.25 GHz	E: 0.1 (0.5) – 1000 %
SHAPED PROBE EHP-2B-07	H: 1 MHz – 1 GHz	H: 0.3 (1.5) – 1000 %
ELECTRIC AND MAGNETIC FIELD SHAPED PROBE EHP-2B-08	E: 1.34 MHz – 60 GHz	E: 0.1 (0.5) – 1000 %
	H: 1 MHz – 1 GHz	H: 0.3 (1.5) – 1000 %

With EHP-2B shaped models of field probes, after selecting the desired limit, the Area Monitor Compact gives the percentage of level referred to it.

Probes belonging to this group allow measurements compensation based on frequency.

If the frequency of the signal (applicable only for single-tone) to be measured is known, it is possible to apply an automatic flatness correction, and the AMC is also able to properly switch between linear (electric and magnetic field) and quadratic (power density) detection according to the standard and frequency. In other words, the field level evaluation becomes linear under 10 MHz (for both standard ICNIRP98 and SC6) or 30 MHz (for ICNIRP2020).

These probes are designed to achieve compact dimensions, useful for area monitoring, therefore resulting a good compromise between size and performance.

To use the EP-1B-09, EP-1B-10, EP-1B-11 and EP-1B-12 with LR-01 Logger Repeater it's necessary the Firmware release 1.28 or higher.

Frequency range	0.1 MHz – 8 GHz
Level range	0.2 – 200 V/m
Overload 600 V/m	
Linearity <sup>(1)</sup>	+/- 0.5 dB (+/- 0.3 dB typical)
Dynamic range	> 60 dB
Resolution	0.01 V/m
Sensitivity	0.2 V/m
	0.1 – 0.15 MHz +1.5/-3 dB
Frequency flatness (typical)	0.15 – 4000 MHz +/- 1.5 dB
	4000 – 8000 GHz +3.5/-1.5 dB
Anisotropy @ 6 V/m <sup>(2)</sup>	+/- 0.8 dB (+/- 0.6 dB typical)
Temperature error	0.03 dB/°C
Temperature sensor	On board
Field sensor	Triaxial orthogonal dipoles
A/D convertion	On board
Calibration <sup>(3)</sup>	internal E <sup>2</sup> PROM
Operating temperature	-20 to +55 °C
Operating relative humidity <sup>(4)</sup>	5 to 95 %
Storage temperature	-30 to +75°C
Dimensions	165 mm length, 54mm diameter
Weight	100 g

Specification are subject to change without notice

When not differently specified the following specifications are referred to operating ambient temperature 23°C and relative humidity 50%. Note (1): At 50 MHz on related level range 6dB above the noise floor

Note (2): At 50 MHz Note (3): Recommended re-calibration interval 24 month

Note (4): Without condensation

Fig. 1-6 EP-1B-09 probe

To use the EP-1B-09 with LR-01 Logger Reapeter it's necessary the Firmware release 1.28 or higher.

Frequency range	0.3 MHz – 40 GHz
Level range	0.5 – 800 V/m
Overload	1200 V/m
Linearity (1)	+/- 0.5 dB (+/- 0.3 dB typical)
Dynamic range	> 64 dB
Resolution	0.01 V/m
Sensitivity	0.5 V/m
	0.3 – 4000 MHz +/- 1.5 dB
Frequency flatness (typical)	4 – 30 GHz +3.5/-2 dB
	30 – 40 GHz +3.5/-3 dB
Anisotropy @ 6 V/m <sup>(2)</sup>	+/- 0.8 dB (+/- 0.5 dB typical)
Temperature error	0.03 dB/°C
Temperature sensor	On board
Field sensor	Triaxial orthogonal dipoles
A/D convertion	On board
Calibration <sup>(3)</sup>	internal E <sup>2</sup> PROM
Operating temperature	-20 to +55 °C
Operating relative humidity <sup>(4)</sup>	5 to 95 %
Storage temperature	-30 to +75°C
Dimensions	165 mm length, 54mm diameter
Weight	100 g

Specification are subject to change without notice

When not differently specified the following specifications are referred to operating ambient temperature 23°C and relative humidity 50%. Note (1): At 200 MHz on related level range 6dB above the noise floor Note (2): At 930 and 1800 MHz

Note (3): Recommended re-calibration interval 24 month

Note (4): Without condensation

Fig. 1-7 EP-1B-10 probe

To use the EP-1B-10 with LR-01 Logger Reapeter it's necessary the Firmware release 1.28 or higher.

Frequency range	0.1 MHz – 12.5 GHz	
Level range	0.2 – 200 V/m	
Overload 600 V/m		
Linearity <sup>(1)</sup>	+/- 0.5 dB (+/- 0.3 dB typical)	
Dynamic range	> 60 dB	
Resolution	0.01 V/m	
Sensitivity	0.2 V/m	
	0.1 – 0.15 MHz +1.5/-3 dB	
Frequency flatness (typical)	0.15 – 4000 MHz +/- 1.5 dB	
	4000 – 12500 GHz +3.5/-1.5 dB	
Anisotropy @ 6 V/m <sup>(2)</sup>	+/- 0.8 dB (+/- 0.6 dB typical)	
Temperature error	0.03 dB/°C	
Temperature sensor	On board	
Field sensor	Triaxial orthogonal dipoles	
A/D convertion	On board	
Calibration <sup>(3)</sup>	internal E <sup>2</sup> PROM	
Operating temperature	-20 to +55 °C	
Operating relative humidity <sup>(4)</sup>	5 to 95 %	
Storage temperature	-30 to +75°C	
Dimensions	165 mm length, 54mm diameter	
Weight	100 g	

Specification are subject to change without notice

When not differently specified the following specifications are referred to operating ambient temperature 23°C and relative humidity 50%. Note (1): At 50 MHz on related level range 6dB above the noise floor

Note (2): At 50 MHz Note (3): Recommended re-calibration interval 24 month Note (4): Without condensation

Fig. 1-8 EP-1B-11 probe

To use the EP-1B-11 with LR-01 Logger Reapeter it's necessary the Firmware release 1.28 or higher.

Frequency range	0.3 MHz – 18 GHz	
Level range	0.5 – 800 V/m	
Overload	1200 V/m	
Linearity <sup>(1)</sup>	+/- 0.5 dB (+/- 0.3 dB typical)	
Dynamic range	> 64 dB	
Resolution	0.01 V/m	
Sensitivity	0.5 V/m	
Frequency flatness (typical)	0.3 – 4000 MHz +/- 1.5 dB 4 – 18 GHz +3.5/-2 dB	
Anisotropy @ 6 V/m <sup>(2)</sup> +/- 0.8 dB (+/- 0.5 dB typical)

Fig. 1-13 EHP-2B-08 probe

**General information** 

This page has been left blank intentionally

# 2 - Installation and use

2.1 Introduction	This section provides the information required for installing and using the SMARTS AMC Area Monitor Compact. Information is included regarding initial inspection, power requirements, interconnections, work environment, assembly, cleaning, storage and shipment.	
2.2 Preliminary inspection	Inspect the packaging for any damage. If the packaging or anti-shock material have been damaged, check that the contents are complete and that the repeater has not suffered electric or mechanical damage. Check that all the Accessories are there against the checklist found with the apparatus. Inform the carrier and NARDA of any damage that has occurred.	
2.3 Work environment	<ul> <li>The work environment of the Accessories, must come within the following conditions:</li> <li>Temperature From -20° to +55° C (0°C to 40°C for Battery Charger)</li> <li>Humidity &lt; 95% relative</li> </ul> The Area Monitor Compact must be stored in a clean and dry environment, free from acid dusts and humidity. The storage environment must come within the range of the following conditions: <ul> <li>Temperature From -30° to + 75° C (-20°C to 60°C for Battery Charger)</li> <li>Humidity </li> </ul>	
2.4 Return for repair	When the Area Monitor Compact needs to be returned to NARDA for repair, please complete the questionnaire appended to this User's Manual, filling in all the data that will be useful for the service you have requested. For reducing the period of time required for the repairs, it is necessary to be as specific as possible in describing the problem. If the problem only occurs in certain circumstances, please describe in detail how it happens. If possible it is better to reuse the original packaging; making sure that the apparatus is wrapped in thick paper or plastic. Otherwise, use strong packaging by using a sufficient quantity of shock absorbent material around all sides of the repeater to ensure that it is compact and does not move around inside the package. In particular, take every precaution to protect the front and rear Main unit panels, Wall support bracket, Interface and Radome. Finish the package by sealing it up tightly. Apply a FRAGILE label to the package to encourage greater care in its handling.	
2.5 Instrument cleaning NOTICE	Use a dry, clean and non-abrasive cloth for cleaning the Area Monitor Compact. Do not use solvents, acids, turpentine, acetone or other similar products for cleaning the repeater in order to avoid damaging it.	

Installation and use

	Safety lest Solutions
2.6 Installation and use	This section provides the information necessary to install and use the SMARTS AMC Area Monitor Compact in different configuration: - Area Monitor Compact Wall mounted (see §2.6.1) - Area Monitor Compact on TR-02A (option) by Tripod support (see §2.6.2) - Area Monitor Compact on ceiling by Wall bracket (see §2.6.3) Area Monitor Compact on ceiling by Tripod AMC support (see §2.6.4)
NOTE	<ul> <li>Area Monitor Compact on ceiling by Tripod AMC support (see §2.6.4)</li> <li>For further information about the use of AMC with Probes Manager software, please refer to the chapter 3, 4 and 6.</li> </ul>
<b>NOTE</b>	For further information about the use of AMC with SMARTS AMC Management software, please refer to the chapter 5.
<b>NOTE</b>	The BLE connection is available for Android and iOS device through the LR-01 Manager App. For further information see Chapter 8 and 9. To active the Bluetooth communication on the AMC the user must connect the Area Monitor to Narda Probe Manager software and enable the BLE function (see §4.2.7.2 Bluetooth connection).
NOTICE	Correct readings may be conditioned by the nature of the places in which the AMC is installed. The field sensor is affected by huge metallic masses or other objects that may reflect the signal, if located in the vicinity of the Area Monitor. Whenever possible, it is a good rule to install the AMC at some distance from walls, high voltage pylons, buildings and other obstacles that could affect the field measuring and the wireless

signals reaching the WiFi device.

The probe used with the AMC has highly sensitive components. Do not insert the probe in fields which exceed the maximum limit allowed.

When measuring fields from transmitting aerials, it is important to place the probe with the supporting handle in line with the polarity of

the aerial. This is to avoid any interference with the reading,

especially when analysing signals of the megahertz range.

In order to avoid interference and the risk of influencing measurements with internal RF module signals (BLE and Wi-Fi), the AMC has been specially designed so that detections are taken when these devices are not radiating.

Prior to installing AMC where the WiFi connection is planned to be used, make sure that the point at which the Area Monitor will be placed is adequately covered by the WiFi network.

The signal strength can be checked using any smartphone capable of indicating the intensity of the WiFi signal. It is also advisable to look for the point at which the signal shows its maximum and, eventually, rotate the AMC along its vertical axis to face the Antenna toward to the point self.

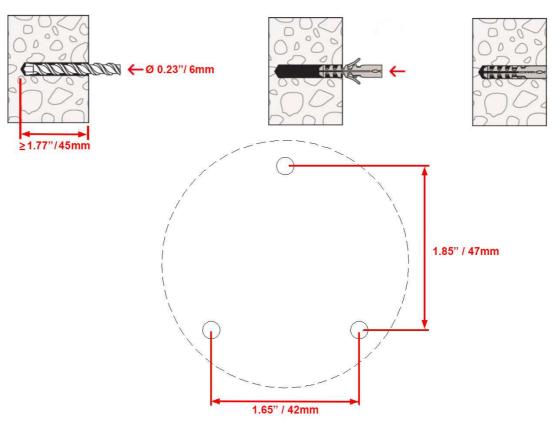

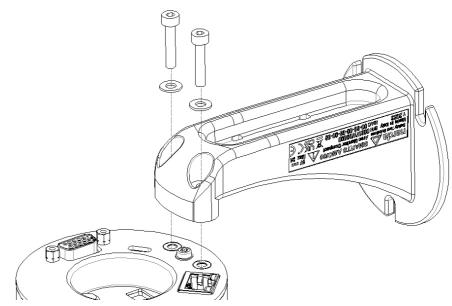

# 2.6.1 Wall mounted Installation

Follow the instructions below:

- Fix the provided three expansion plugs to the wall; for a correct installation refers to the following hole diameter and distance:

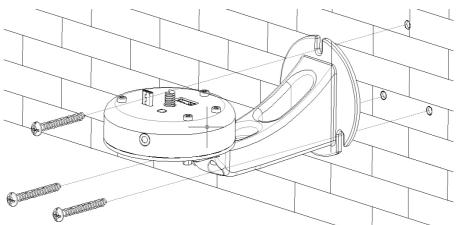

- Assembly the Wall support bracket to the AMC Interface with 2 pcs. socket head cup screws M4x20mm and washers using Allen key 3mm

Installation and use

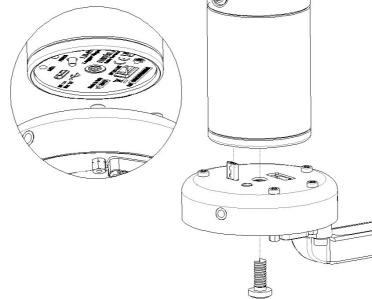

- Install the bracket to the wall and tight the provided 3 pcs. screws 4.5x40mm.

- Turn off the Main unit and plug it into the USB-C connector located on the top of the AMC interface.

Fix the Main unit to the base plate with the provided screws 1/4"x5/8

- Connect the probe to the Main unit upper round multipole connector paying attention to the position key and tightening the bayonet joint.

- Be sure that the Main unit is well connected and the probe connector is well locking.

- Connect the AMC to the PC through USB-C or Fiber Optic or Ethernet port located on the bottom of the AMC interface.

A programmable User's Port is available for external devices or trigger measurements under specific conditions (see §1.7.1).

The USB-C connection provides also the charging of the internal Li-ion battery. Please check the PC port shows enough current to guarantee this service.

Please, always use the supplied USB cables and chargers.

NOTICE

Installation and use

In case of Fiber Optic connection, connect the RP-02 cable to the interface port taking care that the spigot matches the housing. Connect the other side of the fiber optic to the provided USB-OC (taking care that the grip recess points towards the centre of the device). Connect the converter to a PC port.

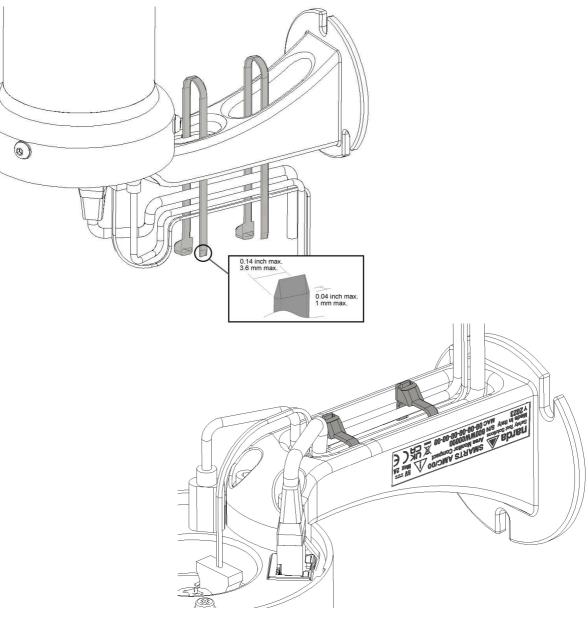

# The USB-OC standard accessory connected to the AMC allows a 40m maximum fiber length; the standard length supplied is 10 m.

# The DB15 and Ethernet cables are optional accessory. Please contact your local Narda distributor for details.

- Install the protective cover to the AMC baseplate and tight the 3 pcs. button head screws M4x10mm and plastic washer using Allen key 2.5mm

- The four oval shaped holes allow user to fasten the cables to the wall bracket using 2 pcs plastic straps (not provided).

Installation and use

- Switch the unit on by pushing the button for a short while and check the Visual Led status (see §2.7)

Pressing the button for more than 4 seconds forces the SMARTS AMC to shut down if it is not supplied by USB-C cable or PoE Injector. Then, it is necessary to wait some seconds before switching the AMC on again.

- Install the Probes Manager (see chapter 3) or SMARTS AMC Management (see chapter 5) on PC from the supplied Software Media.

- Configure the AMC with Narda Probes Manager (see chapter 4) or SMARTS AMC Management (see chapter 5) or custom software (see Chapter 10).

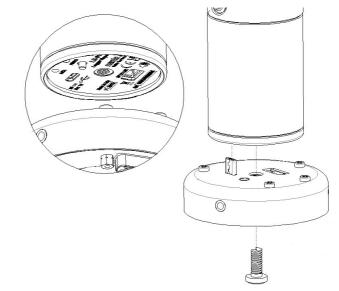

Fig. 2-1 AMC - Wall mounted

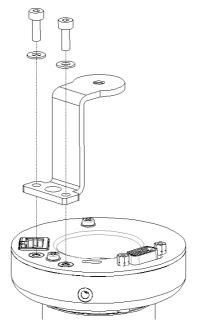

# 2.6.2 Tripod mounted installation

- Install the TR-02A Tripod (optional) on the site to be monitored.

- Turn off the Main unit and plug it into the USB-C connector located on the top of the AMC interface. Fix the Main unit to the base plate with the provided screws  $1/4^{\circ}x5/8$ 

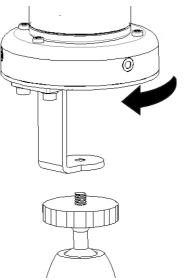

- Assembly the Tripod AMC support to the AMC Interface with 2 pcs. socket head cup screws M4x12mm and washers using Allen key 3mm

- Connect the probe to the Main unit upper round multipole connector paying attention to the position key and tightening the bayonet joint.

- Be sure that the Main unit is well connected and the probe connector is well locking.

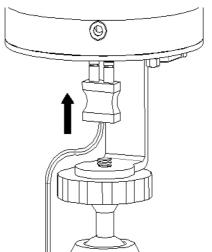

Please, always use the supplied USB cables and chargers.

NOTICE

# The DB15 and Ethernet cables are optional accessory. Please contact your local Narda distributor for details.

It is advisable to use the Fiber Optic connection to prevent the AMC from affecting the measurement.

The fiber connector can be easily plugged into the Optic Link port directly, just taking care about proper orientation, as for the following picture, until a "click" is felt while inserting inside the window.

Connect the other side of the fiber optic to the provided USB-OC (taking care that the grip recess points towards the centre of the device). Connect the converter to a PC port.

## NOTICE

The USB-OC standard accessory connected to the AMC allows a 40m maximum fiber length; the standard length supplied is 10 m.

- Install the protective cover to the AMC baseplate and tight the 3 pcs. button head screws M4x10mm and plastic washer using Allen key 2.5mm

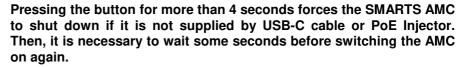

- Unscrew the TR-02A knob without losing it completely and turn the unit in any angle.

Fig. 2-2 AMC on TR-02A

- Switch the unit on by pushing the button for a short while and check the Visual Led status (see §2.7)

- Install the Probes Manager (see chapter 3) or SMARTS AMC Management (see chapter 5) on PC from the supplied Software Media.

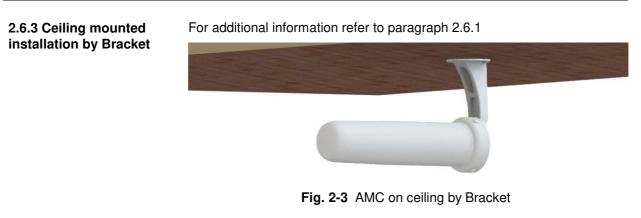

- Configure the AMC with Narda Probes Manager (see chapter 4) or SMARTS AMC Management (see chapter 5) or custom software (see Chapter 10).

2.6.4 Ceiling mounted - Fix the e diameter)

- Fix the expansion plugs 6x30 to the ceiling (refers to the following hole diameter)

- Install the Tripod AMC support to the ceiling and tight the screw  $4.5 \mathrm{x40} \mathrm{mm}.$ 

#### For additional information refer to paragraph 2.6.2

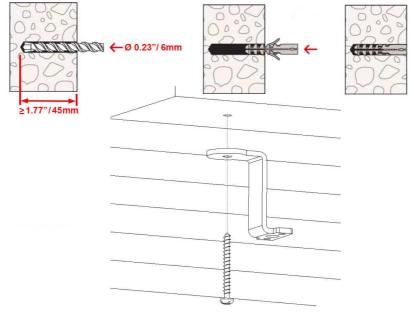

Fig. 2-4 AMC on ceiling by Tripod AMC support

# 2.6.5 Example of installation

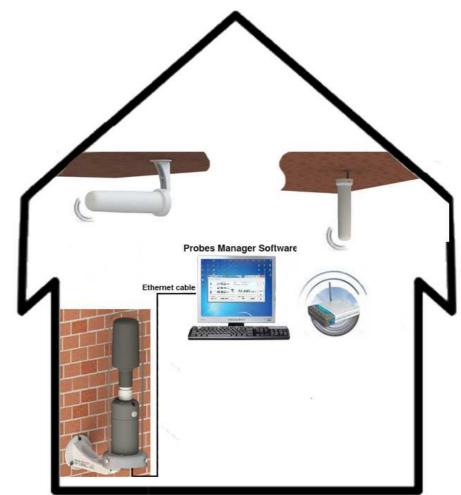

Fig. 2-5 AMC in a multi-probe configuration

Fig. 2-6 AMC link with Wi-Fi communication

Installation and use

Fig. 2-7 AMC link with Bluetooth communication by smartwatch

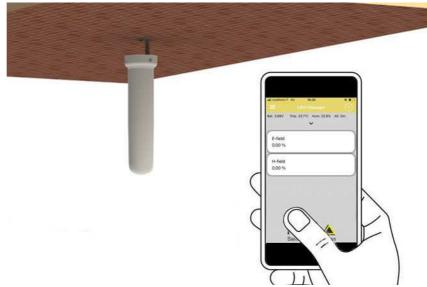

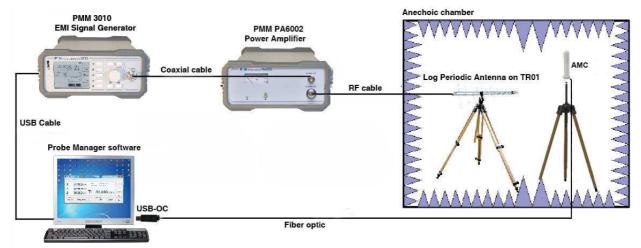

Fig. 2-8 AMC link with Bluetooth communication by mobile device

Installation and use

#### 2.6.6 Use with Power Over Ethernet (optional)

The optional Power Over Ethernet, such as TL-POE150S or equivalent products is available. It delivers power, data and network connection over the same cable to the SMARTS AMC Area Monitor Compact through the Ethernet port available on the bottom of the baseplate (Ethernet cable optional).

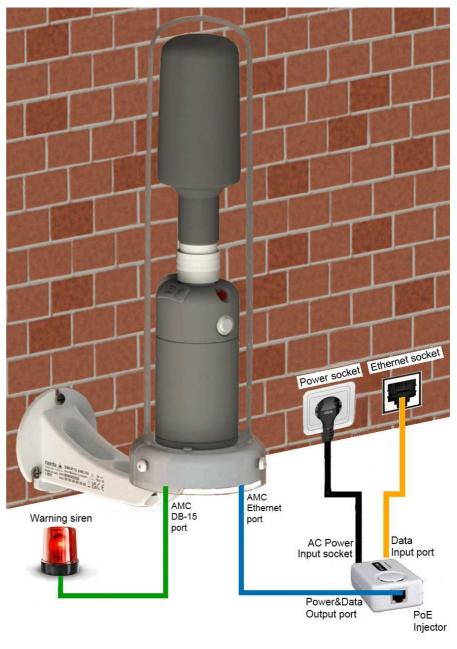

Fig. 2-10 AMC with Power Over Ethernet

For additional information refer to §11.9

Installation and use

2.7 Visual Led status, Manual log button, Buzzer and Accelerometer

		ТА	BLE 2-1 Visual Led status
LED	LED flashing speed	LED color	Description
VISUAL LED	The Visual led begins flashing for 30 seconds and then blinks every 5 seconds	Red	The Area Monitor Compact is ready to communicate
	Solid		Update firmware or Alarm or Warning threshold exceeded.

Visual Led status during Logger acquisition:

	TA	BLE 2-2	Visual Led status in Logger mode
LED	LED flashing speed	LED color	Description
	Solid		Alarm or warning threshold exceeded. If the log is in progress, the LED goes off for one second during the log. If the Log can be activated (AQ_ command with a rate other than 0), prolonged pressure ( $> 5$ s) of the button recognized with the button pressed and not released (Log activated but not started yet).
VISUAL	Low speed	Ded	If the Log can be activated (AQ_ command with a rate other than 0), press of the button before the actual recognition of the start of the log (pressing the button for less than 5 s).
LED	Fast speed	Red	Button pressed when the Logger is disabled and it is not possible to activate it (AQ_ command with rate equal to 0).
	Single flash		Log acquisition, or (also accompanied by a short audible alarm) Logger start with deletion of the Logs previously saved in memory.
	Flashing (with rate dictated by the probe reading speed)		If the Log is in progress with acquisition not based on time (AQ1) and the alarm or warning threshold is continuously exceeded, the LED turns on during the log (and sound alarm always on).

If Area Monitor Compact is not supplied by USB-C cable or PoE Injector, the unit automatically turns OFF when after 30 min. the fiber optic/Ethernet has been disconnected or the communication with PC is not established.

2-14

The fiber optic of the AMC can be disconnected and reconnected while in use. The communication will be restarted automatically.

A manual button allows user to start logging or measurement acquisition or reboot the Area Monitor.

Tabl	e 2-3 Manual log button status
Manual log button	Description
Pressing for more than 5 s	Logger start with deletion of the previously saved Logs (after setting the Logger by means of the AQ_ command). Pressing long enough is notified by the fixed LED lighting up (big red LED) until the button is released.
Short pressing	Logger measurement acquisition (after setting the Logger by means of the AQ_ command). The pressing is notified by the big red LED lighting up. It will turn off when the record is saved.
Pressing while turning on the unit	Reset to default settings with flash save and reboot of the instrument.

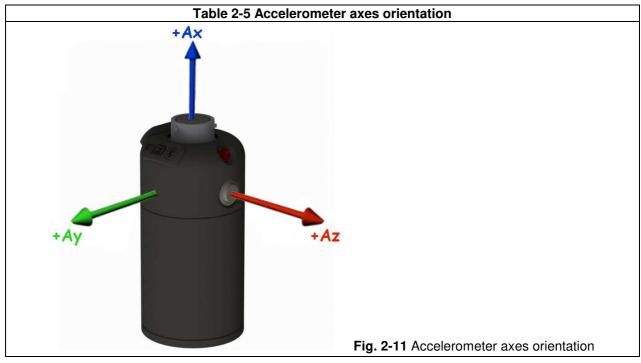

The repeater is equipped with a buzzer, useful for emitting sound alerts.

	Table 2-4 Buzzer status
Buzzer	Description
Long sound	Field level Alarm threshold exceeded.
Short sound	Logger starting.

# Buzzer sound and vibration are not continuous but intermittent, 600ms on and 400ms off.

The repeater is also equipped with an internal Accelerometer that measures acceleration, which in practical terms means changes in speed or direction. It is expressed in hundredths of g for each of the three axes.

Installation and use

2.8 Power supply and battery recharging

Bat.: 65 %

3.90 V

Close

X

🔺 Info

AMC has an internal rechargeable Lithium-ion battery that can be recharged with the USB battery charger supplied with it.

The AC/DC battery charger can be used with a power frequency at either 50 Hz or 60 Hz with a supply voltage between 100 and 240 AC Volt. International AC plug adapters are provided according to the various national standards and it can be easily removed from the battery charger to be replaced by a different one.

Ensure that the batteries are fully charged before using the Area Monitor Compact for longest battery operation time.

The battery status is reported by the Probes Manager software and displayed in Volt and in percentage. It shows the residual autonomy during measurements and the achieved autonomy during charging

NOTE

ALWAYS connect the battery charger to the power supply BEFORE connecting it to the USB-C port located on the AMC Interface bottom. The battery charger has an internal protective circuit that will limit the output of current if there is any load when connecting to the mains.

Battery charger: output: DC, 5 V, 600 mA max

Connector:

In order to safeguard the features of the batteries, it is crucial to have a 80% recharge before storing them for periods longer than 4 months. Therefore, it is warmly suggested recharging the batteries at least every 4 months even though the device has not been used.

The minimum voltage level for operation is about 3,0 V. The batteries must be recharged for lower voltages. Below such voltage the AMC will turn OFF automatically.

JOTE

The time required for recharging the batteries is about 2,5 hours.

To take reliable measurements, it is advisable to ALWAYS remove the battery charger from AMC.

### 3 – Probes Manager software installation

**3.1 Introduction** This chapter is the installation and operation guide of the PC Software Probes Manager supplied with the SMARTS AMC Area Monitor Compact.

The Probes Manager is a software instrument that integrates the SMARTS AMC Area Monitor Compact and allows displaying the measured field level directly on a Personal Computer screen.

To ensure the proper operations of the Probes Manager software, the minimum hardware requirements of the Personal Computer are

- Processor Core i3
- 2 GB RAM
- 10 GB free space on hard disk;
- Windows Operating system<sup>™</sup> Win7 and Win10

3.3 Installation

3.2 Hardware

requirements

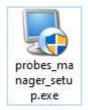

To obtain firmware or program updates for AMC, please contact your NARDA distributor or download it directly from the NARDA Web site http://www.narda-sts.it

To install the Probes Manager on PC from the supplied Software Media as follows.

#### Do not connect the AMC to the PC until the installation is completed.

Browse the Software Media in Computer Resources and double click on the Probes Manager Setup.exe file to start the installation

Click Yes when requested.

Do you want to allow th unknown publisher to n device?	
Probes_Manager_Setup.exe Publisher: Unknown File origin: Hard drive on this co Show more details

Probes Manager software installation

The installing status is displayed then:

Click Finish to complete and exit the installer.

When asked for, reboot your system to complete installation

Probes Manager software installation

The folder **Probes Manager** is created under **Programs\Narda Safety** with **Probes Manager** (see Chapter 4) and **LR-01UP** (see Chapter 6) executable.

Another item is created in the Programs list at Start Menu, which is "**Narda Safety**", where the "**probes\_manager**" and "**LR-01 Update Firmware**" programs must be run from.

The probes\_manager and LR-01UP icon will be available on desktop.

Probes Manager software installation

This page has been left blank intentionally

### 4 – Probes Manager Operating instructions

#### 4.1 Introduction

This section provides the information necessary to use the Probes Manager software with the SMARTS AMC Area Monitor Compact.

To obtain firmware or program updates for AMC, please contact your NARDA distributor or download it directly from the NARDA Web site http://www.narda-sts.it

The software is able to manage the AMC via an optical connection (fiber optic), via a wired connection (i.e. USB or Ethernet ) and via Wi-Fi connection.

If Area Monitor Compact is not supplied by USB-C cable or PoE Injector, the unit automatically turns OFF when after 30 min. the fiber optic/Ethernet has been disconnected or the communication with PC is not established.

The AMC cannot be connected to PC via Bluetooth. The BLE connection is available only for mobile device through the LR-01 Manager App; for further information, see chapter 8 and 9.

At the first connection, connect the AMC to PC via optical or wired connection (see §2.6), switch the Area Monitor Compact on, the Visual led begins **flashing red** for 30 seconds and then **blinks red** every 5 seconds to indicate the Area Monitor Compact is ready to communicate and click the **Probes Manager** icon on desktop.

Alternatively (Windows 10): Start  $\rightarrow$  All Programs  $\rightarrow$  Narda Safety  $\rightarrow$  Probes Manager.

Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

Probes Manager operating instructions

This window is displayed:

	narda 🔼
	Safety Test Solutions
	Please select comm port
Connect	USB Serial Port (COM4)
Connect	
	USB Serial Port (COM4)
Connect Auto Search	USB Serial Port (COM4)

- If the AMC is connected to PC via USB wired connection, the device appears as "Serial USB device (COMn)".

- If the AMC is connected to PC via optical connection (through USB-OC), the device appears as "**USB Serial Port (COMn)**".

In Windows 7 and Windows 10 the USB-OC should be automatically installed on your computer.

The Narda Probe Manager installation folder also includes the file requested for the driver installation on path (folder installation) Driver USB-Serial.

Select the port on the list and click **Connect.** 

	USB Serial Port (COM4)	
Connect	Porta di comunicazione (COM1)	
Auto Search		

At the next connection the software will display the AMC on the list port with its serial number.

Porta di comunicazione (COM1)		Connect
	Porta di comunicazione (COM1)	
Auto Search		Auto Search

Instead, using the "**Auto Search**" button the software automatically detects the COM port to which AMC is connected, display the Area Monitor Compact on the list port with its serial number and, in case of using fiber optic connection, enable the **Remote On using FO** box

If the AMC is replaced with other device or viceversa without removing the USB-OC, the **Auto Search** button must be used to detect the new instrument.

Once selected the button, the connection progress bar is displayed.

#### Select the port on the list and click Connect

Connect	USB Serial Port (COM4) (LR01) - 000ZW30301 Porta di comunicazione (COM1)
Auto Search	
no search	

Remote On Using FO

The **Remote On using FO** box can be very convenient for turning the AMC on from remote, when it is located far away or in places that are not easily accessible (i.e. inside anechoic chambers etc.).

Place the Area Monitor Compact on the site to be monitored, run the software, tick  $\sqrt{}$  the **Remote On using FO** box, press **Connect** to switch on the AMC and open the software.

	narda 🔼
	Safety Test Solutions
	Please select comm port
Connect	USB Serial Port (COM4) (LR01) - 000ZW30301 Porta di comunicazione (COM1)

If the WiFi connection has been enabled previously (see §4.2.7.1 Wi-Fi Communications), it will be possible to activate the corresponding communication, if desired, by ticking  $\sqrt{}$  the Wi-Fi box.

When the WiFi connection is enable, the Wireless module is placed in "stand-by" condition and, If no action is taken in the last 10 minutes, it turns OFF.

Every time the AMC is switched on again, the module will return in the same condition since the wireless is enable.

If AMC is supplied by USB-C cable or PoE Injector, the Wireless module will not automatically switch off after 10 minutes and remains always on.

Place the AMC on the site to be monitored, run the software, tick  $\sqrt{}$  **Ethernet** box, press **Connect** to start the communication.

Conne	ct			
Wi-Fi 🗸	Ethernet			
Wi⊧Fi 🗸	Ethernet			

The image above showed the default Ethernet parameters. Using button **Read** and **Write** is possible check and set the parameters in the AMC.

When the Ethernet communication is switched on, the optical port is not available.

Altimeter	Compass		e&Tin	

#### 4.2.5.1 Altimeter

	$\supset$
$\sqrt{g}$	NOTE

The Altimeter can be useful in applications where the height of measurements are relevant, such as, for example, base transceiver station.

The Altimeter works in relative mode. It returns the difference, in meters, from the height where the device was calibrated. It is a barometric altimeter that allows higher accuracy, precision and resolution than GPS. It must be considered that it is subject to variations in atmospheric pressure and therefore it is necessary to calibrate it at each different measurement session.

To set to zero the internal Altimeter, click on Altimeter. A confirmation message will be display:

#### 4.2.5.2 Compass

Compass

To improve the AMC location accuracy, the user must calibrate the compass clicking on **Compass**.

While holding the AMC by Radome and following the method shown on screen, move it around different times, tracing a figure eight in the process. The percentage in the upper left part of the main window and the blue bar indicate the progress of the calibration.

🛓 probes_manager 3	.07.03 - COM3						- 🗆 ×

The BLE module is placed in "stand-by" condition and, If no action is taken in the last 10 minutes, the Bluetooth connection turns off. Every time the AMC is switched on again, the module will return in the same condition since the BLE is set **ON** in the **settings**.

If AMC is supplied by USB-C cable or PoE Injector, the Wireless module will not automatically switch off after 10 minutes and remains always on.

If a command is sent while the BLE communication is enable and the Fiber optic or USB or Ethernet cable is connected, the priority is given to the wired connection.

- Disconnected the cable.

- At the next connection, active the wireless communication by simply ticking  $\sqrt{}$  the WiFi box on Probe Manager software and press Connect (see §4.2.7.1 Wi-Fi Communications)

NOTE

The Bluetooth connection is available only for Android and iOS device through LR-01 Manager App. For further information see Chapter 8 and 9.

Probes Manager operating instructions

4.2.8 Standard (for EHP-2B probes only) factory.

- Load a default standard limit saved into the EHP-2B probe memory at the

To enable the limit, mark with  $\sqrt{}$  the corresponding box available on **Settings** tab → **Standard**.

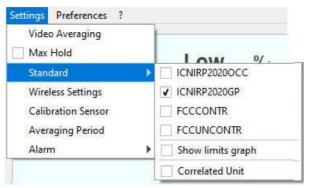

The limit list depends on the EHP-2B model probe connected, as follows:

- EHP-2B-05 and EHP-2B-06 Standard limit list:

Video Averaging Max Hold	1	
Standard		ICNIRP98OCC
Wireless Settings		✔ ICNIRP98GP
Calibration Sensor		SC6CONTR
Averaging Period		SC6UNCONTR
Alarm		Show limits graph
		Correlated Unit

ICNIRP 1998 Occupational; select the ICNIRP 1998 Occupational limit ICNIRP 1998 General Public; select the ICNIRP 1998 General Public limit SC6 2015 Controlled; select the SC6 2015 Controlled limit SC6 2015 Uncontrolled; select the SC6 2015 Uncontrolled limit

- EHP-2B-07 and EHP-2B-08 Standard limit list:

ICNIRP 2020 Occupational; select the ICNIRP 2020 Occupational limit ICNIRP 2020 General Public; select the ICNIRP 2020 General Public limit FCC-96 326 Occupational; select the FCC-69 329 Occupational limit FCC-96 326 General Public; select the FCC-69 329 General Public limit

The Standard function is enable only when an EHP-2B model probe is connected to the AMC.

NOTE

The "Show limits graph" and "Correlated unit" functions are enable only when the Correction Frequency is ON and EHP-2B model probe is connected to the AMC (see §4.3.3 for further information).

#### 4.2.9 Alarms

Video Averaging	
Max Hold Standard Wireless Settings Calibration Sensor Averaging Period	
Alarm	<ul> <li>Alarm S(H) Level</li> <li>Alarm S(E) Level</li> <li>Probe failure</li> <li>Battery level</li> </ul>

Frequency 1.	✓ USB cable ✓ RH
Probe failure Batter	<ul> <li>Notify by Buzzer</li> <li>Notify by LED</li> <li>Notify by Vibration</li> </ul>

✓ Alarm S(H) Level

✓ Alarm S(E) Level
Probe failure

✓ Battery level

✓ Temperature

✓ Notify by Buzzer

Notify by Vibration

✔ Notify by LED

✓ USB cable

✓ RH

The software provides 7 alarms and for each one of them there is a square in the control window that will show the alarm current status:

- RED: alarm condition occurred;
- GREEN: alarm control active.
- **EMPTY**: alarm control not active

Enable the software to notify alarms by ticking  $\sqrt{}$  the corresponding box available on **Settings** tab  $\rightarrow$  **Alarms**.

Leave empty when no action is taken (Probe failure in the example).

					Alarm S(H)	Alarm S(E)
Probe failure	Battery level	Temperature	USB cable	RH	5.00 %	6.00 %

The **Alarms** shown on the main window and the **Status** column reported in the report (see §4.6.8 Download Log) are independent of each other. Doesn't matter If the control of alarms are active or not, the AMC will always be able to record any alarm occurred during logger acquisition.

- Alarm S(H)/H Level next page
  - Alarm S(E)/E Level next page

- **Probe failure:** In case of absence or malfunction of the probe an alarm will be notify.

- **Battery level:** The internal control system of the AMC features a voltmeter for continuous measurement of the battery voltage. This function ensures constant control of the power situation for correct operation of the Area Monitor Compact.

The square turns red when the value is equal or below the 3.25V.

- **Temperature:** The AMC features a thermometer for the measurement of the internal temperature, in order to have constant control upon the environmental conditions affecting the correct operation of the repeater.

- **USB cable:** In case USB cable connected and/or AMC under charging an alarm will be notify.

- **RH (Relative Humidity):** The AMC also features a hygrometer for the measurement of the internal Relative Humidity, in order to have constant control upon the environmental conditions affecting the correct operation of the Area Monitor Compact.

This function also allows the user to set which device(s) should be enabled for both **Alarm Level** notifications.

Enable the device to notify alarms by ticking  $\sqrt{}$  the corresponding box or leave empty when no action is taken (Vibration in the example):

- Notify by Buzzer: Enable the Buzzer for alarm level notification
- Notify by LED: Enable the Visual Led for alarm level notification
- Notify by Vibration: Enable the Vibration for alarm level notification

Using DualBand Electric and Magnetic probe, both field value are continuously compared with the Alarm thresholds, set by the user, to determine whether any field alarm condition is occurring.

- Alarm S(H) / Alarm H: set the Magnetic field level threshold for Alarm notification

- Alarm S(E) / Alarm E: set the Electric field level threshold for Alarm notification

The averaged field will be calculated in order to the average type and time period set on **Average period** (see §4.2.10 Averaging Period) and compared with the enabled thresholds.

On exceeding one of these thresholds, the corresponding square turns red and, if the corresponding box "**Notify by...**" is enable  $\sqrt{}$ , Visual Led lights up red, on-board acoustic and vibration alarms will also provide.

When the field value returns below the set value, the square window returns green, the led goes off and the device return in the previous condition.

In the below example, the alarm is actived when the Magnetic field exceeds 5% averaged and/or Electric field exceeds 6% on the last 6 minutes. Thus, brief but intense field variations will not necessarily cause the alarm if the <u>averaged value</u> does not exceed the H and/or E threshold.

🔺 Averaging period 🛛 –		×		
Averaging Period				
• AVG				
O RMS	6.00 minut	es	Alarm S(H)	Alarm S(E)

	Close	

Once all settings and parameters are set, the software provides:

- Display Live measurements on the main window (see §4.3)
- Saving Live measurements on the text file (see §4.4)
- Display Live measurements in graph way (Plot) (see §4.5)
- AMC programmable operation (Logger) (see §4.6)

4.3 Display Live measurements on the main window During live measurements the value is displayed with three decimals on the main window.

Using DualBand Electric and Magnetic probe, the screen will display both field value in percentage (EHP-2B-02 as example):

- S(E) / E Power density calculated in far field condition or Electric field strength

-  $\mathbf{S}(\mathbf{H})$  /  $\mathbf{H}$  Power density calculated in far field condition or Magnetic field strength

Settings Preferences	1

### The chapter 1 of this manual includes the list of the field probes available and their technical specifications.

If the field value of the probe is outside the nominal level range, the following messages are displayed:

**Ovr :** the field level is higher than 110% of the probe nominal maximum level (for example, 1100 % for EHP-2B-07).

**Field value marked in red:** the field level is between 100% and 110% of the probe nominal maximum level (from 1000 to 1100 % for EHP-2B-07).

**Field value marked in blue:** the field level is between the probe nominal minimum level and its 20% higher (for example, from 0.1 to 0.12 % for EHP-2B-07).

Low : the field level is lower than probe nominal minimum level.

• For example, 0.1 % for EHP-2B-07

Some parameters and technical data are shown in the upper right part of the main window:

Freq.: 2170.000 MHz	Video Averaging: 4 (RMS)	Bat.: 75 %
	Max Hold: On	T: 27.0 °C
	Compass: 142 (SE)	RH: 46.4 %
	Mean: 0.25 min	Alt: 1 m
	Wi-Fi: ON 172.20.10.4:6666	

Description:

- **Freq:** frequency chosen for correction, or OFF when disabled.

- Video Averaging: number of the readings on which the RMS average is calculated during Live measurements or OFF when disable

- Max Hold: ON when enable, or OFF when disable.
- Compass: compass heading in degrees and cardinal directions.

- Mean (Averaging Period): time period on which the averaged field is calculated

- Wifi: Wifi status, IP Address of the AMC and Port used by the Area Monitor Compact

- **Bat:** the residual battery autonomy during measurements or the achieved autonomy during charging in 5% steps; battery voltage below 5% of charge are displayed in red.

The numeric value is available on ? tab  $\rightarrow$  Info  $\rightarrow$  Battery voltage with resolution of 0.01V (for example, the 3.10V corresponds to the 5%).

- T: temperature in degrees Celsius.
- RH: percentage of relative humidity.
- Alt: relative altitude in meters.

# The above labels may change in case of using different probes or configuration.

The probe connected to the AMC is displayed on the **Probe** box and, in case of using DualBand Electric and Magnetic probe, the reference standard set is shown together with the model (see §4.2.8 Standard").

Probe		
	EHP-2B-07 SC6UNCONTR	

The latest calibrated data is displayed on ? tab  $\rightarrow$  Info  $\rightarrow$  Calibration Date

🛕 Info	×
٩	EHP-2B-07 Latest Calibration: 31.10.23
	ОК

Probes Manager operating instructions

The probe of the AMC can be disconnected and reconnected while in use. The communication will be restarted automatically and the AMC performs a diagnostic test while a progress bar shows the process.

🔺 probes_manager	3.07.03 - COM3							- 0	
Settings Preference	s ?

Probe failure	Battery leve	H _	Temperature	USB cable	RH 5	.00 %	6.00 %	Exit	

Once a link has been established, the live measurements are displayed in the main window again:

ttings Preferences	7						
S(E): S(H):		0.45 1.78		Freq.: 50.000 MHz	Video Averaging: O Max Hold: Off Compass: 125° (SE) Mean AVG: 1 min	T: 22.3 °C	Auto save csv Plot Sample Hold
							Device OFF
orrection				Reading	Pro	be	Logger
Frequency	50.000	MHz	OFF	Rate	0.3 s	EHP-2B-07 SC6UNCONTR	
					Alarm S(H)	Alarm S(E)	

In case of absence or malfunction of the probe, the message "Probe not connected" appears on the main window.

If enable  $\sqrt{}$ , a Probe failure alarm will be notify (see §4.2.9 Alarms) as shown in the below example.

Probe not co	onnected	Mean AVG: 1 min	Ait: 0 m	Plot Sample Hold Device OFF
Correction	Reading	Probe		Logger
Frequency 50.000 MHz OFF	Rate	0.3 s		

4.3.1	Sample	In the control window the <b>Sample</b> square blinks at the Reading rate set and shows by its color the current status of the data acquisition:
	Sample	<b>RED</b> : data acquisition is still in progress or paused
	Sample	GREEN: data acquired

**4.3.2 Reading Rate**The field value is displayed on the Main window and Plot (Graph) at the Reading Rate set in seconds.
If **Auto save txt/csv** is enable, the data are also saved on the text/table file at the same interval (see §4.4.1 Auto save txt/csv)
The maximum value settable is 30 seconds.

Insert the Reading rate value and press Enter key to confirm.

R

eading		
Rate	0.3	s

If the value entered is not allowed, a warning message will appear and the nearest correct value will be set by the software.

4.3.3 Correction Frequency, Correlated Unit and Show Limits graph EHP-2B probe have flatness compensation factors on board that can be applied when the signal source frequency is known, in order to make the measurement even more accurate. To recall the **Correction frequency** factor (in MHz):

- Clicking on **OFF**, the button toggles to **ON** for enabling the function.
- Insert the Frequency correction value

Correction		
Frequency	50.000 MHz	OFF

To disable the Correction Frequency click **ON** button, the button toggles to **OFF** for disabling the function

If the value entered is not allowed, a warning message will appear and the nearest correct value will be set by the software

If the correction frequency is ON the percentage indication of the standard could be calculated in power density for electric "S(E)" and magnetic "S(H)" field strength in far-field conditions or Electric "E" and magnetic "H" field.

The Electric/Magnetic field detection is related to the standard selected for frequencies lower than:

- 10 MHz for both standard ICNIRP98 and SC6
- 30 MHz for ICNIRP2020
- Never, always power density is applied, for FCC

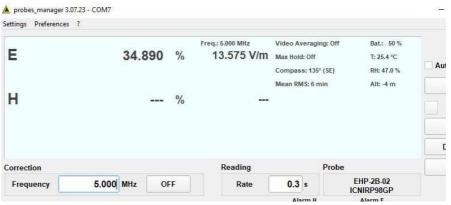

Video Averaging Max Hold		
Standard	►	ICNIRP98OCC

ettings Preferences		9.860	%	8.111 V/m 0.022 A/m Reading	Max Hold: Off Compass: 136° (SE) Mean RMS: 6 min	T: 27.2 °C RH: 41.7 % Alt: 0 m
1	5 ? 10.000	9.860		8.111 V/m 0.022 A/m	Max Hold: Off Compass: 136º (SE) Mean RMS: 6 min	T: 27.2 °C RH: 41.7 % Ait: 0 m

If the frequency correction is enabled but out of range of calibration table stored on probe in use, the indication show the result "---" instead of the value.

If the frequency correction is ON and Show Limits graph function is active ( $\checkmark$ ) on Standard menu, the software shows the measurement and limit according to the Standard and Correction Frequency set.

The example above with correction frequency ON at 50 or 10 MHz for ICNIRP2020GP.

Using **E** or **H** button on the upper right of the graph during Electric/Magnetic field detection, the user can display the Electric or Magnetic measurement and limit.

Press **Close** to exit from the limit graph.

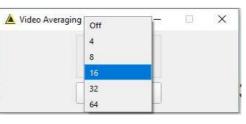

#### 4.3.4 Video Averaging

Settings	Preferences	?
Vide	o Averaging	
Max	Hold	
Stan	dard	•
Wire	less Settings	
Calib	oration Sensor	
Aver	aging Period	
Alarr	n	

While live measurements are performed, the user can also display the RMS averaged field using the **Video Averaging** function.

The number of the readings on which the RMS average is calculated is available on the **Video Averaging** drop-down menu: 4, 8, 16, 32, 64. or OFF when disable.

In the below example the Video Averaging is set to 16.

Once selected, the  $\boldsymbol{Avg}$  counter is started and displayed in red on the main window:

E H	0.45 1.78	Freq.: 50.000 MHz	Video Avg: 5 of 16 Max Hold: Off Compass: 125° (S Mean AVG: 1 min	T: 22.3 °C	Auto save csv Plot Sample Hold Device OFF
		Reading	Pi	obe	Logger
Correction					

When the process is ended, the preset value is shown; the RMS averaged field is displayed on the main window and updated at the Reading rate setting since the function was activated.

ettings Preferences ?					
		Freq.: 2170.000 MHz	Video Averaging: 16 (RMS)	Bat.: 60 %	Total
X:	1.787 V/m	Filter: 80 Hz	Max Hold: On	T: 27.7 °C	
			Compass: 209° (SW)	RH: 37.5 %	Auto save txt
			Mean RMS: 6 min	Alt: 3 m	Plot
Y:	0.832 V/m				Sample
		1			Hold
Z:	0.626 V/m	T:	1.99	<b>95</b> V/m	Device OFF
orrection		Reading	Probe		Logger
Frequency 21	10.000 MHz OFF	Rate	0.25 s	EP 33C	
			Warning	Alarm	

When a different Video Average value is selected or a parameter is changed, the calculations is restarted.

#### 4.3.5 Max Hold

Settings	Preferences ?	
Vide	o Averaging	
🖌 Max	Hold	
Stan	dard	Þ
Wire	less Settings	
Calib	oration Sensor	
Aver	aging Period	
Alarr	n	

At any time the maximum field strength value can be retained and displayed since the Max Hold has been activated  $\sqrt{}$  on Settings tab. It is therefore updated only if the new value is greater than the previously displayed one showing thus the maximum in the frequency range since the Max hold function was activated

#### 4.3.6 Hold/Run

While live measurements are performed, the user can freeze the readings pressing **Hold** button. Press the button again to Resume.

#### 4.3.7 Device OFF

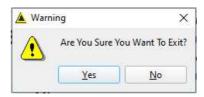

Device OFF

Exit

**Device OFF** button can be very convenient for turning the AMC off from remote, when it is located far away or in places that are not easily accessible (i.e. inside anechoic chambers etc.) and quit the program.

4.3.8 Exit

Press **Exit** to exit and quit the program (the AMC remains on). The current settings are saved and will be recalled at the next start.

Press Yes to close the software or No to continue using the software

4.4 Saving Live measurements	While the live measurements are performed, the software allows collecting measurements directly in the internal memory of the AMC and saving in a report file using the <b>Auto save txt</b> or <b>Auto save csv</b> function (the format depends on the Text file separator set on <b>Preferences</b> tab $\rightarrow$ <b>Appearance</b> ).
4.4.1 Auto save txt/csv	In the upper-right main window enable the function √ to start saving the measurements at the Reading rate set: ✓ Auto save txt ✓ Auto save csv

Clicking the box again disable the function and causes the end of saving measurements.

Auto save csv

A text report file will be created with specific name а Probemodel\_Meas\_dd\_mm\_yyyy\_hh\_mm\_ss.txt and saved on the folder: Documents\NardaSafety\NardaProbesManager

For every working session (from starting to ending saving) a new text file will be created on NardaProbesManager folder :

File Home Condividi

If the field measured is outside the nominal level range, the value is displayed with **Ovr** or **Low** (see Pag.4-18).

Probes Manager operating instructions

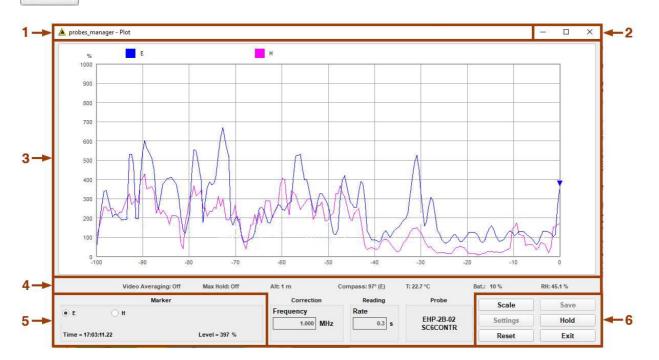

#### 4.5 Display Live measurements on the graph (PLOT)

Plot

The PLOT function performs Time Domain measurements and showing how the signal level changes over time.

The screen displays a continue running graph at the Reading Rate setting.

Once selected the **PLOT** button, the following graph will appear:

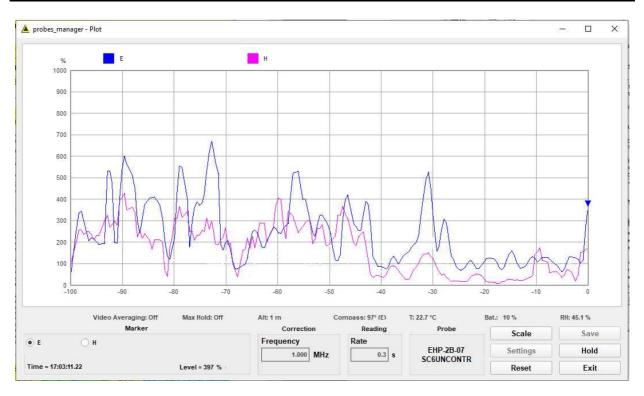

Commands description:

- 1. Title bar
- 2. Control window buttons
- 3. Plot (Graph)
- 4. Parameters and technical data
- 5. Marker
- Button function 6.

4-28 **Probes Manager operating instructions** 

Some parameters and technical data are shown in the lower part of the control window (for explanation see Pag.4-19).

4.5.1	Settings	The Plot and Time/Div setting appear as set on <b>Preferences</b> tab $\rightarrow$ <b>Appearance</b> .
4.5.2	Hold/Run	Both can be changed with <b>Settings</b> button in the bottom right corner of the plot; to enable this command the graph must be paused by clicking <b>Hold</b> button. Press <b>Run</b> to resume the analysis.
4.5.3	Reset	At any time the user can restart the analysis by clicking <b>Reset</b> button.

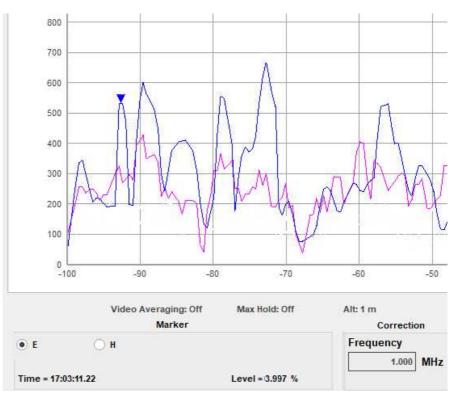

All the data previously displayed will no longer be available for new download. It is therefore suggested to save any measurement result before resetting (see §4.5.6 Save).

#### 4.5.4 Marker

For a detailed analysis of the graph, a marker appears on the screen as a colored arrow. In the **Marker** window the user can select on which trace to place the marker and move it to any point holding the left mouse key down. In the same window is shown the level marked and the instant in which the measurement is made.

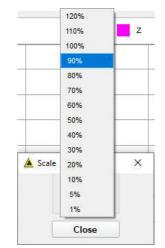

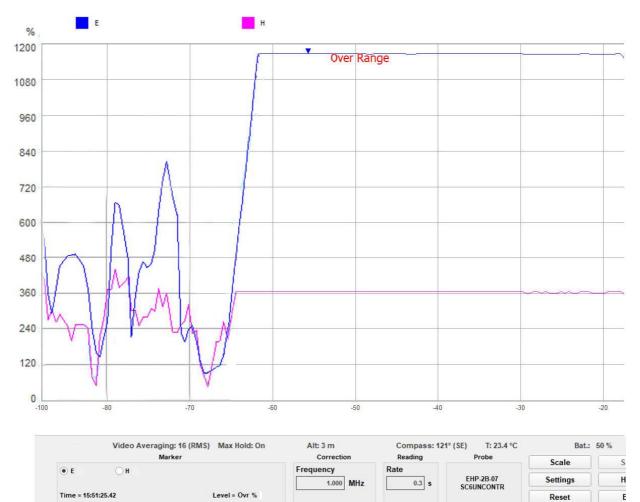

# The above labels may change in case of using different probes or configuration.

4.5.5 Scale

When the level is close or over the limit, It is suggested to select Scale button to increase the scale.

If the field level is higher than 110% of the probe maximum nominal level, a red **Over Range** message will be display on the center top of the graph.

In the Marker window is shown **Level = Ovr** and the instant in which the measurement is made.

#### Notice the **E** : **Ovr** % indication will also appear on the main window:

H 379 %	lean AVG: 1 min	Alt: 0 m Plot Sample
		Hold
		Device OFF
Correction Reading	Probe	Logger
Frequency 50.000 MHz OFF Rate		2B-07 ICONTR
	Alarm H	Alarm E

Probes Manager operating instructions

4.5.6 Save

Press **Save** button to save the plot as bitmap image or text file (the graph must be paused by clicking **Hold** button):

- Save the graph displayed as a bitmap image (.bmp) for insertion in other applications such as a Word Processor or Image Editor.

When the table is opened, an huge amount of data are available; the text file has the same format as the **Auto save txt/csv** function (see §4.4.1).

#### 4.5.7 Exit

4-32

Click Exit button to go back to the main window

Exit

Probes Manager operating instructions

4.6 Storing measurements on the AMC memory (Logger)	AMC is suitable for short-term, medium and, especially, long survey thanks to high capacity internal battery. In Logger acquisition mode it is possible to program the Area Monitor Compact for collecting and storing data directly in its internal memory. The Logger settings provides:
Logger	<ul> <li>Set Logger acquisition method;</li> <li>Transfer to PC the data acquired;</li> </ul>
	- Save data in text format and display as a table.

Clicking **Logger** button, this window will appear:

Logger acquisition	Logger Saving	Log format
	✓ Threshold triggered	Compact     Extended
O Instantaneous	Only press button	✓ Only the first: 1 min.
• Mean RMS: 6 min	O Time Based	Start Log
		Download Log

**4.6.1 Logger acquisition** To perform programmable acquisition follow the instructions step-by-step:

- Set Logger acquisition method (Logger acquisition)
- Choose the storing mode (Logger saving)
- Select the Download data format (Log format)
- Set Download period (**Only the first**)
- Start Logging data (Start log)
- Stop Logging data (**Stop log**)
- Export measurement results in text file (Download Log)
- Display the data as a table

The Logger acquisition method available:

0	Instantaneous	
۲	Mean AVG: 6 min	

- Instantaneous: to acquire the instantaneous field level, not averaged.

- Mean RMS/AVG: *m* min: to acquire the averaged field level calculated in the interval set.

The average type and the time period are set on Settings tab  $\rightarrow$  Averaging period

Probes Manager operating instructions

**4.6.2 Logger saving** Then, select the **Logger saving** mode:

1000	Logger Saving	
	✓ Threshold triggered	
	Only press button	
	○ Time Based	

NOTICE

As above example, when "Threshold triggered" and "Only press button" or "Time base" function is enable, priority is given to the Threshold triggered

The internal memory capacity and battery duration are affected by:

- the storing Rate (Time Based)
- how often the alarm is triggered (Threshold triggered)
- How often Manual Log button is pressed (Only press button)

- **Threshold triggered:** when active  $\sqrt{}$ , the acquired measurement (instantaneous or averaged) will be stored in the AMC internal memory only when the measured field is above the alarm level set on **Alarms** box (doesn't matter if active or not on **Settings** tab).

V/m		
	V/m	V/m

In the above example the storing process is triggered when the field exceeds 3 V/m averaged on the last 6 minutes. Thus, brief but intense field variations will not necessarily cause the alarm if the <u>averaged</u> value does not exceed 3 V/m.

Logger acquisition	Logger Saving		
	✓ Threshold triggered		
O Instantaneous	Only press button		
Mean AVG: 6 min	○ Time Based	Alarm H	Alarm E

In the above example, in case of using DualBand Electric and Magnetic probe, the field value is continuously compared with both alarm thresholds set by the user. On exceeding one of these thresholds, the storing process is triggered.

**4.6.3 Only press button** - **Only press button**: When active **(instantaneous or averaged)** is stored in the AMC internal memory each time the Manual Log button is pressed

#### Only press button

Pressing the Manual Log button for more than 5s will delete all previous saved data.

Pressing long enough is notified by the fixed big red led lighting up until the button is released.

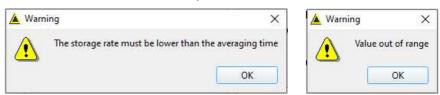

In the below example, the instantaneous (not averaged) field value will be saved in the AMC internal memory each time the Manual Log button is pressed.

Logger acquisition	Logger Saving
	Threshold triggered
Instantaneous	Only press button
O Mean AVG: 6 min	◯ Time Based

**4.6.4 Time based (Every)**: - **Time based (Every)**: When active (instantaneous or averaged) will be stored in the AMC internal memory at the interval set in seconds each.

Every 5 second

If the value entered is higher than the **Averaging period** (see §4.2.10) or the maximum allowed (900 sec.), a warning message will appear and the nearest correct value will be set by the software.

In the below example, the averaged field value calculated in the last 6 minutes will be saved in the AMC internal memory at the interval of 5 seconds each.

Logger acquisition	Logger Saving	
	Threshold trigg	gered
O Instantaneous	Only press but	ton
Mean AVG: 6 min	Every	5 second

Probes Manager operating instructions

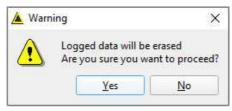

4.6.5 Log format Also the Log format can be set:

- **Compact** The file does not contain Acceleration, Speed, Latitude, Longitude, GPS, and Compass information. Each data record is 32 bytes in size and allows storing in the AMC internal memory up to 125k measurements.

- **Extended** The file contains all data. Each data record is 64 bytes in size and allows storing in the AMC internal memory up to 250k measurements.

For further information, see §4.6.8 Download Log button.

**4.6.6 Start Log** Once all parameters are set, press **Start Log** button to start logging measurements and the following message will appear:

It is suggested press **No** and download the previous data before starting a new measurements campaign.

Clicking **Yes**, all the data of the previous one will be deleted and afterwards the AMC provides simultaneously a brief Visual Led lights up red, on-board acoustic and vibration alarm when start logging measurements.

When the data is saved in the AMC internal memory, the Visual Led lights up red at the storing rate set (Every) or only when the Alarm level is triggered or the Manual Log button is pressed.

**4.6.7 Stop Log** When the analysis is ended, press Stop Log button to stop logging measurements and the following message will appear:

Confirm with Yes.

After stopping the Log, the measurements stored in the AMC internal memory can be downloaded pressing Download Log button, otherwise will not be available anymore.

4.6.8 Only the first function and Download Log button

The **Download Log** button downloads the data stored on AMC internal memory to a PC and save them as a text file with a specific name: LOGGER\_Probemodel\_dd\_\_hh\_mm\_ss.txt

If the function **Only the first** is not enable, the data are download from starting to stopping log data.

the	first:	
1	min.	
	the 1	the first: 1 min.

If enabled ( $\sqrt{}$ ) the results can be stored on PC in the data interval set from the **Start** Log to user selectable time period (in minutes); it is therefore possible to export the desired time range without downloading the entire working session

10	Only the f	irst:	
	1	min.	

The file is stored in the following the path: NardaProbesManager\Year\Months\Day.

		Des	criptions:				
		- LR	01 Serial n.: S	Serial numbe	er stored on AMC	;	

- Probe name: Probe type connected to the AMC
- Calibration date: Latest probe calibration
- Log type: Log acquisition method
- Standard: Reference standard (for EHP-2B probe model only)

Probes Manager operating instructions

- Date: Working session date in dd/mm/yyyy format

- Time: Hour, minute, second of the measurement acquisition

- S(E) / E-field RMS: shows the RMS average calculated on electric "S(E)" field strength in far field condition or Electric "E" field

- S(E) / E-field peak: shows the peak value measured on electric "S(E)" field strength in far field condition or Electric "E" field

- S(H) / H-field RMS: shows the RMS average calculated on magnetic "S(H)" field strength in far field condition or Magnetic "H" field

- S(H) / H-field peak: shows the peak value measured on magnetic "S(H)" field strength in far field condition or Magnetic "H" field

- Battery: Battery voltage

- Altitude: Relative altitude in meters.

- Temperature: Temperature in degrees Celsius.

- RH: Percentage of relative humidity.

- Status: any alarms occurred during the monitoring activity is marked with:

**A** = Field Level exceeded Alarm;

W = Field Level exceeded Warning;

**U** = USB cable connected Alarm;

V = Low Battery Alarm;

**P** = Probe failure Alarm;

**T** = OverTemperature Alarm;

C = Relative Humidity Alarm;

"-" means that specific Alarm (or warning) is not armed.

The **Status** column in the text report and the **Alarms** shown on the Main window are independent of each other. Doesn't matter if active or not on **Settings** tab, the AMC will always be able to record any alarm occurred during Logger acquisition.

- **Perturbing:** any data affected by disturbance activity will be marked with: **U** = USB cable connected;

**UCHARGING** = USB cable connected and AMC under charging.

"-" means that specific Perturbing activity is not armed.

Use of the battery charger is not recommended during measurement, as it may introduce noises that could noticeably affect the readings.

The presence of one of the above marker indicates that the measurement result could have been affected by the related occurrence and the plausibility of the result should be verified.

- AccelerationX(g): Gravitational acceleration in hundredths of g for X axis
- AccelerationY(g): Gravitational acceleration in hundredths of g for Y axis

- **AccelerationZ(g):** Gravitational acceleration in hundredths of g for Z axis For Accelerometer axes orientation see §2.7.

- Speed(km/h): speed measured during mobile operation
- Latitude: North-South position
- Longitude: East/West position
- GPSAltitude(m): height in meters above mean sea level
- Compass Heading: compass heading in degrees and cardinal directions.

Some labels may also change in case of using different probes or configuration.

**Probes Manager operating instructions**

5.1 Introduction

### 5 – SMARTS AMC Management software

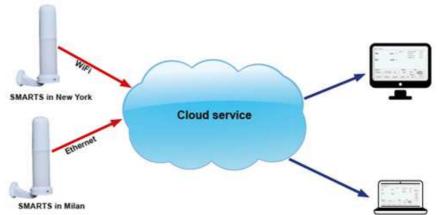

This section provides the information necessary to install and use the SMARTS AMC Management software with the SMARTS AMC Area Monitor Compact.

The SMARTS AMC Management software allows user to manage the SMARTS AMC Area Monitor Compact accessible locally (Local Area Network) and wherever located in the world (External network) simultaneously.

The **Local Area Network** is a direct connection between the AMC and the PC using the wired cable or Wi-Fi through router. All information and data are acquired in real time and stored on own computer.

In **External network** there is no direct connection between the AMC and the PC. The user, wherever located in the world, can perform live measurements and store data with the AMC connected in local net or remotely by cloud. All results of EMF monitoring can be downloaded on own computer or shared publicly and free of charge online (via a webbased solution).

Each records contains measurement result average, peak and their comparison with fixed threshold, address, geographical position and an image of the station for easy identification. Whenever the level exceed the thresholds set, the SMARTS AMC Management software sends an alarm to the control center by e-mail addresses, or by hardware alarm.

5.2 Hardware requirements To ensure the proper operations of the SMARTS AMC Management software, the minimum hardware requirements of the Personal Computer are

- Processor Core i3
- 2 GB RAM
- 10 GB free space on hard disk;
- Windows Operating system<sup>™</sup> Win7 and Win10

To obtain firmware or program updates for AMC, please contact your NARDA distributor or download it directly from the NARDA Web site http://www.narda-sts.it

Windows server and database services is required for using Cloud based.

#### 5.3 Installation

To install the SMARTS AMC Management software on PC from the supplied Software Media as follows.

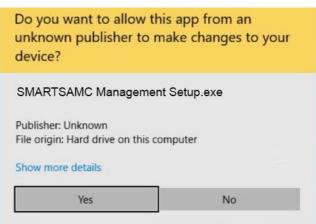

Do not connect the AMC to the PC until the installation is completed.

Browse the Software Media in Computer Resources and double click on the **SMARTSAMCManagement Setup.exe** file to start the installation

Click **Yes** when requested.

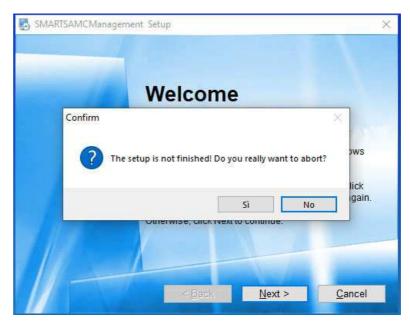

Click **Next** to proceed installing.

The installation can be aborted by clicking Cancel button:

Click Next to confir	m the default	folder or C	hange to	modify.

SMARTS AMC Management software

#### The installing status is displayed then:

Click Finish to complete and exit the installer.

#### When asked for, reboot your system to complete installation

The folder SMARTSAMCManagement Setup is created under Programs\Narda Safety with SMARTSAMCManagement executable.

Another item is created in the Programs list at Start Menu where the "SMARTSAMCManagement Setup" programs must be run from.

The AMCManagement icon will be available on desktop.

The software is able to manage the AMC via an optical connection (fiber optic), via a wired connection (i.e. USB or Ethernet ) and via Wi-Fi connection.

If Area Monitor Compact is not supplied by USB-C cable or PoE Injector, the unit automatically turns OFF when after 30 min. the fiber optic/Ethernet has been disconnected or the communication with PC is not established.

The AMC cannot be connected to PC via Bluetooth. The BLE connection is available only for mobile device through the LR-01 Manager App; for further information, see chapter 8 and 9.

#### 5.4 AMCManagement - C control window

- Click the AMCManagement icon on desktop.

Alternatively (Windows 10): Start  $\rightarrow$  All Programs  $\rightarrow$  SMARTSAMCManagement Setup  $\rightarrow$  AMCManagement.

#### **Descriptions:**

- Location: SMARTS AMC name
- IP: IP address assigned to the AMC and the number of the port.
- Identification: AMC Serial Number
- Measurement level: The averaged field calculated in order to the average time set
- Alarm level: field level threshold for alarm notification

- Alarm Status: any alarms occurred during the monitoring activity is marked with:

- **A** = Field Level exceeded Alarm;
- **W** = Field Level exceeded Warning;
- **U** = USB cable connected Alarm;
- V = Low Battery Alarm;
- **P** = Probe failure Alarm;
- **T** = OverTemperature Alarm;
- **C** = Relative Humidity Alarm;
- "-" means that specific Alarm (or warning) is not armed.

The presence of one of the above marker indicates that the measurement result could have been affected by the related occurrence and the plausibility of the result should be verified.

- Timestamp: The date and time of the last measurement acquired.

- At any time the user can refresh the screen with **Refresh** button on control window buttons

## 6 – Update Firmware

6.1 Update Firmware This section provides the information necessary to update the AMC firmware.

It is important to update the AMC firmware in order to use all the new functions added and eliminate any bugs in the software.

To obtain firmware or program updates for AMC, please contact your NARDA distributor or download it directly from the NARDA Web site <u>http://www.narda-sts.it</u>

To update the AMC firmware proceed as follows:

- Connect the AMC to PC via Fiber Optic connection (through USB-OC).

- The AMC cannot be update via USB wired or Wireless connection.
- Turn off the AMC
- Click the LR-01UP icon on desktop.

Alternatively Start → All Programs → Narda Safety → LR-01 Update Firmware

#### Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

This window is displayed.

- Pressing the **USB-OC** button, the LR-01UP utility automatically detects the COM port to which AMC is connected.

The User can manually select the COM port assigned to the Area Monitor Compact using the RS232 drop-down menu (the device appears as "**USB** Serial Port (COMn)".

Select the **RS232** button to confirm.

USB-OC	]
RS232	Porta di comunicazione (COM1)
	USB Serial Port (CDM3)
	Porta di comunicazione (COM1)

- Once selected the COM port, make sure the AMC has enough battery level to perform the Update Firmware and proceed with **Yes**.

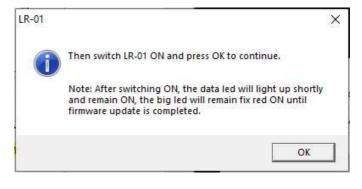

- A message will inform to turn the AMC off. Press OK to confirm.

- Then switch the AMC on, check the big led status and press **OK** to continue.

- A window is displayed. Click on Update Firmware button to proceed.

Firmware	LR-01UP	×		
	Flashing terminate		10000000	00000)
C	1		EX	ат

- Press **OK**, turn the AMC off and turn it on again.

The new firmware release can be displayed in the Probe Manager software (see chapter 4).

Update Firmware

This page has been left blank intentionally

## 7 – Uninstalling driver and software

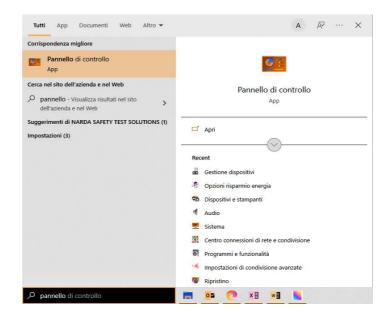

#### 7.1 Uninstalling driver for the USB-OC

It is possible to remove the USB-OC driver from the PC according to the following procedure:

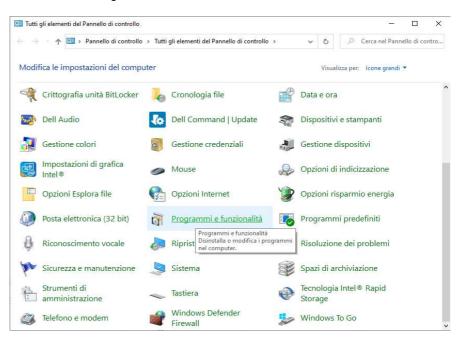

Open the Windows Control Panel.

The following procedure shows how to remove the driver in Windows 10 environment. It may be different depending on the operating system in use.

Double click "Programs and Features".

Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

Uninstalling driver and software

From the application list select "PL-2303 USB-to-Serial", click "Uninstall" and follow the instructions.

Programs and Features			-

#### 7.2 Uninstall Narda Probes Manager

Press **EXIT** to quit Narda Probes Manager, disconnect the AMC from the PC and uninstall the software.

In Win7 click Windows , NardaProbesManager, then Uninstall Probes\_Manager and follow the instructions.

In Win10 click Start **Start**, Settings, App&Features, find and select **Probes\_Manager**, click **Uninstall** and follow the instructions.

← Settings			- 🗆 X

When asked if removing the shared files, answer NO to prevent other programs not to run correctly.

### 8 – LR01 Manager APP Operating instructions

8.1 Introduction Narda introduces an innovative way to perform the AMC measurements on mobile device by a dedicated App. This section provides the information necessary to use the LR01 Manager application.

8.2 Installation Download and install the LR01 Manager application on your device from Google or Apple store. Once the application is successfully installed, the LR01 Manager icon is displayed on home screen.

Android release 10.0 or higher must be installed on the device to use NOTICE the LR01 Manager App. iOS release 11.0 or higher must be installed on the device to use the NOTICE LR01 Manager App. NOTICE Make sure turning on the Bluetooth on AMC and the device. To active the Bluetooth communication on the AMC the user must NOTICE connect the Area Monitor Compact to Narda Probe Manager software and enable the BLE function (see §4.2.7.2 Bluetooth connection). To active the Bluetooth communication on the device, refer to the NOTICE instructions of its manufacturer. If the App has already been installed on the device, before starting the NOTICE App make sure the software is not running to avoid communication errors. Turning on AMC, the Visual led begins flashing red for 30 seconds and then blinks red every 5 seconds to indicate the Area Monitor Compact is ready to communicate (see §2.7) Clicking on the icon to run the application, the Bluetooth pairing request will appear. Select "Pair" to confirm. **Bluetooth Pairing Request** "LR01" would like to pair with your iPhone.

Cancel

Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

LR-01 Manager operating instructions

Pair

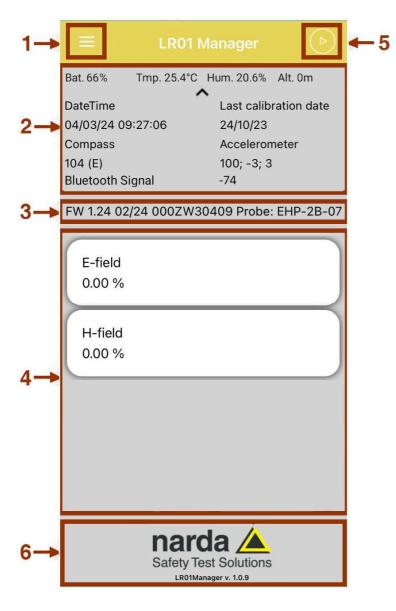

Once the link has been successfully established, the LR-01 Manager app 8.3 LR01 Manager provides the following features: Main window - Changing AMC settings. - Performing live measurements.

- Logging and saving data.

These are the basic operations to follow to work with the LR01 Manager. All additional information and explanations can be found on chapter 4.

- Commands description:
- Menu 1.
- 2. Technical data
- 3. Unit's identifier and Probe type
- 4. Measurements window
- 5. Logger button
- 6. Info

8.3.1	3.3.1 Menu		
¢	Device		
ŝ	Settings		
B	Save		

#### 8.3.1.1 Settings

≡ Settin	ngs		
Low Pass Filter	40 Hz	_	Send
Data	18/03/2024	_ (	Send
Time	12:42	_	Send
Altitude Reset			Send
Compass Calibration			Send
KFR OFF		Hz	Send
Sampling Time	900	_ms	Save
Standard	1	_	Send

#### Commands:

- Device: to display the Main window.
- Settings: allows to modify the AMC settings.
  - **Save:** allows to take a photo of the site monitored and generates an email with attached the last working session log file and the picture.

Settings window allows to:

- Set the AMC internal clock with the **Date** and **Time** of the PC.
- Set to zero the internal Altimeter reference.
- Calibrate the internal Compass Calibration for more accuracy.

- Recall the **Frequency correction factor** (in Hz) stored in the AMC memory or OFF when disabled. When the KFR is ON the measured field value turns blue in the main window (for further information see §4.3.3).

E-field 4.40 %	
H-field	
3.53 %	

- **Sampling time**: Set the time interval (in milliseconds) between subsequent readings.

- **Standard**: Load a default standard limit saved into the EHP-2B probe memory at the factory.

The limit list depends on the EHP-2B model probe connected, as follows:

- EHP-2B-05 and EHP-2B-06 Standard limit list:

- 1  $\rightarrow$  ICNIRP 1998 Occupational;
- 2 → ICNIRP 1998 General Public;
- $3 \rightarrow$  SC6 2015 Controlled;
- 4  $\rightarrow$  SC6 2015 Uncontrolled.

- EHP-2B-07 and EHP-2B-08 Standard limit list:

- 1  $\rightarrow$  ICNIRP 2020 Occupational;
- 2 → ICNIRP 2020 General Public;
- $3 \rightarrow$  FCC-96 326 Occupational;
- $4 \rightarrow$  FCC-96 326 General Public.

# The Standard function is enable only when an EHP-2B model probe is connected to the AMC.

The new setting can be saved pressing the corresponding **Send** or **Save** button; once the value is stored, the button turns blue.

Select **Menu** button = and then **Device** to return to the Main window.

LR-01 Manager operating instructions

#### 8.3.2 Technical data

Bat. 66%	Tmp. 25.4°C	Hum. 20.6%	Alt. 0m
		<b>`</b>	
DateTime		Last calib	ration date
04/03/24 09:27:06		24/10/23	
Compass		Acceleron	neter
104 (E)		100; -3; 3	
Bluetooth S	lignal	-74	

In the upper part of the main screen, some technical data are shown.

- **Bat:** It shows the residual autonomy during measurements and the achieved autonomy during charging.

- Tmp: followed by the temperature in degrees Celsius.
- Hum: followed by the percentage of relative humidity.
- Alt: followed by the relative altitude in meters.
- DateTime: Date and time set on AMC.
- Last Calibration date: Latest probe calibration.

- **Compass:** followed by the compass heading in degrees and cardinal directions.

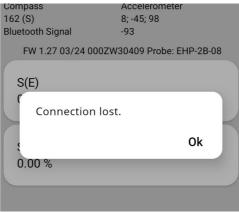

- **Accelerometer:** Gravitational acceleration is expressed in hundredths of g for each of the three axes. For Accelerometer axes orientation see §2.7.

- Bluetooth Signal: It shows the quality of the Bluetooth connection

In situations where the Bluetooth connection is poor, a red "**bluetooth** signal is weak" message will be display on the top of the LR-01 Manager main window.

≡ LR01 Man	ager 🕑		
bluetooth signal is weak			
Bat. 76% Tmp. 27.3°C	Hum. 45.6% Alt. 4m		
^			
DateTime	Last calibration date		
18/03/24 12:24:16	18/05/23		
Compass	Accelerometer		
100 (E)	21; -46; 96		
Bluetooth Signal	-89		

Instead, If the Bluetooth connection get lost, the following message is shown:

When the Bluetooth communication with the AMC is established again, the pairing request will appear.

**8.3.3 Live Measurements** The mobile device performs live measurements and display the data with all other related information in the LR-01 Manager main window.

The screen show the percentage indication of the standard in power density (quadratic scale) calculated on electric "**S**(**E**)" and magnetic "**S**(**H**)" field strength in far field condition or Electric "**E-field**" and magnetic "**H**-field" (linear scale).

The chapter 1 of this manual includes the list of the field probes available and their technical specifications.

◄ App Store ■■■■ 4G	09:27	<b>2</b> 52%
=	LR01 Manager	
Bat. 52% Tmp	o. 22.2°C Hum. 50.1%	Alt. 0m

E-field 0.00 %		
H-field 0.00 %		
	arda ety Test Solution	IS

These are the basic operations to follow to work with the LR01 Manager. All additional information and explanations can be found on chapter 4.

8.3.4 Logger and Save Measurements

In addition to the live measurements, the App allows logging measurements on mobile phone, saving on its internal memory and sending by email in a simple and reliable way:

Click the button in the upper-right main window to start the measurements log. The following message will appear:

Logging is in progress.	
	Ok
$\bigotimes$	

Clicking the button causes the end of measurements log and a message pops up telling:

Ok	Logging is disabled.	
		Ok

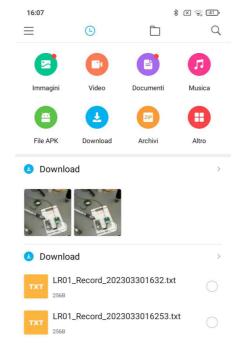

Starting a new log, all the data of the previous one will be deleted. No data is saved in the internal memory of AMC; see §4.6 Storing measurements on the AMC memory (Logger)

After stopping the Log, the measurements acquired can be downloaded pressing the **Save** button (Menu  $\rightarrow$  Save) otherwise will not be available anymore. This button allows to take a photo of the site monitored and generates an email with attached the .txt data log file and the picture.

On Android device only, when the working session is stopped the data and, if taken, the picture are saved in the **Download** directory.

A new **.TXT** file will be created with a specific name: **LR01\_Record\_yyyymmddhhmmss.txt**.

When the file is saved in .txt format and the table is opened, a huge amount of data are available. For every working session (from starting to closing logging) the following headline will be created in the txt file:

FW 1.21 01/24 000ZW30304 Probe: EHP-2B-07 - Unit: % - GPS: 44.07489013, 8.15974998 - Date: 05/02/2024

Time E-field H-field

- Firmware version and released data (FW 1.21 01/24)
- AMC Serial Number (000ZW30304)
- Probe connected to the AMC (Probe EHP-2B-07)
- Measurement unit (Unit: %)
- Measurements GPS coordinates (GPS: 44.07...., 8.15....)
- Working session date in dd/mm/yyyy format (Date: 05/02/2024)
- Hour, minute, second of the measurement acquisition (**Time**)

- **S(E)** / **E-field S(H)** / **H-field:** Power density calculated in far field Electric/Magnetic field strength. Between brackets is

Example with EHP-2B-07 probe

FW 1.21 01/24 000ZW30304 Probe: EHP-2B-07 - Unit: % - GPS: 44.07489013, 8.15974998 - Date: 05/02/2024

Time	E-field	H-field
18:07:25	0.00	0.00
18:07:26	0.00	0.00
18:07:27	0.70	0.00
18:07:28	0.00	1.00
18:07:29	0.00	0.00
18:07:30	0.90	0.00
18:07:31	0.00	1.10

The recorded data can be viewed either as a graph or as a table using common software as an example Word or Excel application.

## 9 – Using of LR-01 with WearOS (Smartwatch) Operating instructions

### 9.1 Introduction

### 9.2 Installation

This section provides the information necessary to use the AMC SMARTS Area Monitor Compact with the optional Smartwatch.

Download and install the LR01 Manager application on your smartwatch from Google or Apple store.

Once the application is successfully installed, swipe **Upwards** on the watch screen the user will be able to view the LR01 Manager icon displayed on the **Apps screen.** 

NOTICE

WearOS release 3.0 or higher must be installed on the Smartwatch to use the LR01 Manager .

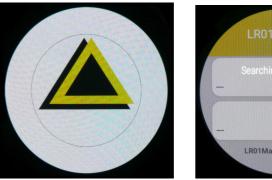

If the App has already been installed, tap on **Recent Apps** and make sure the software is not running to avoid communication errors (see §9.4 Close the App).

Also make sure turning on the Bluetooth on AMC and Smartwatch.

To active the Bluetooth communication on the AMC, the user must connect the Area Monitor Compact to Narda Probe Manager software and enable the BLE function (see §4.2.7.2 Bluetooth connection).

Turning on AMC, the Visual led begins **flashing red** for 30 seconds and then **blinks red** every 5 seconds to indicate the Area Monitor Compact is ready to communicate (see §2.7)

Tap on the LR01 Manger icon to run the application; a welcome screenshot will show for a few seconds, then the "Searching for LR01" indication appears.

Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

Smartwatch

9.3 Operations

These are the basic operations to follow to work with the LR01 Manager. All additional information and explanations can be found on chapter 4

9.3.1 Live Measurements

Once the link has been successfully established, the Main window is displayed showing the live measurements together with software release.

The screen show the percentage indication of the standard in power density (quadratic scale) calculated on electric "S(E)" and magnetic "S(H)" field strength in far field condition or Electric "E-field" and magnetic "H-field" (linear scale)

The chapter 1 of this manual includes the list of the field probes available and their technical specifications.

Swipe to the left or right to enter on **Technical data** or **Settings** panel; see the upcoming paragraph.

### 9.3.2 Technical data

Enter on the Technical data panel.

Swiping upwards or downwards on the screen, further technical data are shown:

- **Bat:** It shows the residual autonomy during measurements and the achieved autonomy during charging.

- Tmp: followed by the temperature in degrees Celsius.
- Hum: followed by the percentage of relative humidity.
- Alt: followed by the relative altitude in meters.
- DateTime: Date and time set on AMC
- Last Calibration date: Latest probe calibration

- **Compass:** followed by the compass heading in degrees and cardinal directions.

- **Accelerometer:** Gravitational acceleration is expressed in hundredths of g for each of the three axes. For Accelerometer axes orientation see §2.7.

- Bluetooth Signal: It shows the quality of the Bluetooth connection

In situations where the Bluetooth connection is poor, a red "**bluetooth signal is weak**" message will be display on the top of the LR-01 Manager main window.

Instead, If the Bluetooth connection get lost, the message "Connection lost" is shown; click "Ok".

When the Bluetooth communication with the LR-01 is established again, the pairing request will appear.

- Firmware and data release, Serial Number and Probe model

Smartwatch

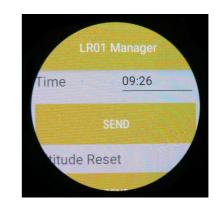

### 9.3.3 Settings

Enter on the Settings panel.

Swiping upwards or downwards on the screen, all settings are shown:

- Set the internal digital Filter
- Set the AMC internal clock with the Date and Time of the PC
- Set to zero the internal Altimeter reference
- Calibrate the internal Compass Calibration for more accuracy

- Recall the  $\ensuremath{\textit{Frequency correction factor}}$  (in Hz) stored in the AMC memory or OFF when disabled

- **Sampling time**: Set the time interval (in milliseconds) between subsequent readings

- Standard: Load a default standard limit saved into the EHP-2B probe memory at the factory.

The limit list depends on the EHP-2B model probe connected, as follows:

- EHP-2B-05 and EHP-2B-06 Standard limit list:
- 1 → ICNIRP 1998 Occupational;
- 2 → ICNIRP 1998 General Public;
- $3 \rightarrow$  SC6 2015 Controlled;
- $4 \rightarrow$  SC6 2015 Uncontrolled.

- EHP-2B-07 and EHP-2B-08 Standard limit list:

- $1 \rightarrow$  ICNIRP 2020 Occupational;
- 2 → ICNIRP 2020 General Public;
- 3 → FCC-96 326 Occupational;
- 4 → FCC-96 326 General Public.

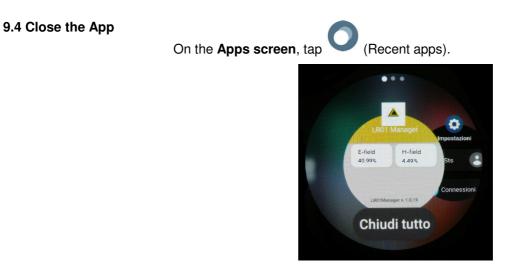

# The Standard function is enable only when an EHP-2B model probe is connected to the AMC.

The new setting can be saved pressing the corresponding **Send** or **Save** button; once the value is set, the button will turn blue.

Use the bezel or swipe left or right on the screen to move to the app to close.

Swipe upwards on the app to close it or Tap on **Close all** to close all running apps.

This page has been left blank intentionally

## 10 - Command protocol

#### **10.1 Introduction**

This chapter provides the information required to control the SMARTS AMC Area Monitor Compact via one of the communication ports (e.g. the fiber optic) connected to a PC and by means of user's own PC software applications.

The communication between the host and the AMC can be in wired USB or Ethernet, in optic USB (USB-OC) or wireless (Wi-Fi or Bluetooth).

Serial communication protocol is the following:

- Baud: 115200 (default, or other speeds selectable)
- Parity: NONE
- Length: 8 bit
- Bit Stop: 1

The commands have the following general format:

### **#LRcommand\*** where:

**#LR** = opens the command string; **?** = for query commands only; **Command** = command string;

\* = closes the command string.

#LR prefix is a wildcard to establish a communication with every AMC. To connect to a specific Area Monitor Compact, a #nn should be used instead. Where nn is the address of the Area Monitor Compact desired, which can be set by the SADR command.

The commands available are divided into two main categories:

- Query COMMANDs;
- Setting COMMANDs.

Commands are made of ASCII strings delimited by the character "#" (0x23) and the character "\*" (0x2A).

The replies are terminated with  $\langle CR \rangle \langle LF \rangle (0x0D)(0x0A)$ .

An example to request the unit's name is as follows: **#LR?IDN**\* The answer is like: IDN=Cisano;000WE20501

Another example, to read the temperature at the AMC with address 01: **#01?TMP\*** 

The Baud Rate is set at 115200 baud as default.

To switch to one of the other speeds available, please refer to command SBDR.

It is possible to return to a 115200 bps by following the same procedure.

Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

At power ON, AMC is automatically set to listen to both the USB and the optic port for incoming commands.

The optic port will be always available for communicating with the unit. User's own software can ask for measurement data when desired or can switch the Area Monitor Compact to master mode where measurement data are continuously sent over the communication port, without the need of asking for each.

At any time the operation mode can be switched back to slave mode.

While operating in slave mode, AMC sends answers to the received commands, according to the communication protocol described below.

If Area Monitor Compact is not supplied by USB-C cable or PoE Injector, the SMARTS AMC automatically turns off 30 minutes after receiving the last command.

Please, do not try any commands not covered in this manual, as random poking can cause the system to crash or lose data and calibrations.

#### 10.2 List of commands

	Table 9-1 Query COMMANDs list
Syntax	Function
?ADR	Requests Area Monitor Compact's address.
?ALR	Requests alarm threshold.
?ALT	Requests relative altitude.
?AMC	Requests the Area Monitor Compact output status.
?AMS	Requests the Area Monitor Compact input status.
?AMV	Requests the Area Monitor Compact release and date.
?ANY	Requests the devices mask for alarm notification
?AQ	Requests logger settings.
?AVG	Requests the averaging mode setting.
?BAT	Requests battery voltage.
?BDR	Requests optic port speed (baud rate).
?BLE	Requests the state of the BLE connection.
?CKG	Requests GPS status.
?CLK	Requests date and time.
?CPS	Requests compass and accelerometer readings.
?DCM	Requests the automatic communication setting at power on.
?GCS	Requests the Real Time Clock setting status.
?GPS	Requests position information.
?IDN	Requests Area Monitor Compact's identification.
?IDNF	Requests Area Monitor Compact's extended identification.
?KFR	Requests the setting for the correction depending on the frequency.
?LFA[S]	Requests the latest average field value.
?LOG	Requests binary log file via wired connection.
?LPF	Requests Low Pass Filter setting for passive probes.
?LST	Requests Logger status.
?MAC	Requests the Wireless MAC address.
?MES	Requests the instantaneous field level.
?MESS	Requests the instantaneous field level with continuous transmission.
?MESR[v] ?MESf	Requests the instantaneous field level + position and sensors data, continuous. Requests the instantaneous field level + position and sensors data.
?MESI ?MESs	Disables continuous transmission activated by MESR[v] command.
?MSK	Requests the alarms mask.
?NET	Requests the list of the Wi-Fi available networks.
?PRB	Requests probe information.
?S/N0	Requests the Area Monitor Compact's serial number.
?SID	Requests the stored Wi-Fi network name.
?SNS	Requests environment sensor data: temperature, relative humidity and pressure.
?SST	Requests the Wi-Fi signal level.
?STA	Requests all alarms status.
?STM	Requests masked alarms status.
?STS	Request the reference standard (for EHP-2B model probe only).
?TMP	Requests environment temperature and relative humidity.
?VST[V]	Requests power supply and battery charging status.
?WFI	Requests the state of the Wi-Fi connection.
?WLOG	Requests binary log file via wireless connection.
?WMEi[fv]	Requests % value related to i-th standard.
?WRN	Requests warning threshold.
?WVR	Requests firmware version of the internal Wi-Fi + BLE module.

	Table 10-2 Setting COMMANDs list
Syntax	Function
<b>SADR</b> a	Sets Area Monitor Compact's address.
<b>SALR</b> s	Sets alarm threshold.
SALT	Resets the reference altitude.
SAMCk para	Set the Area Monitor Compact output and alarm(s)
SANY	Sets the device for alarm notification
SAQ_m;x;t	Sets the logger parameters.
SAVGI;r	Selects the averaging time and type
SBDR b	Sets baud rate.
SBLEx	Switches Bluetooth ON or OFF.
SCLDd.m.y	Sets the RTC date.
SCLT h.m.s	Sets the RTC time.
SCPCt	Runs compass calibration.
SDCMc	Sets the preferred communication channel at power on.
SGCSAh	Automatic time set.
SGCSM	Manual time set.
SGOF	Switches OFF the GPS module.
SGOOFF	Switches OFF the Area Monitor Compact.
SGOI	Switches ON the GPS module.
SIDN i	Sets the Area Monitor Compact's identifier.
SKFR f	Sets the frequency correction value and makes it active.
SLPF f	Selects the Low Pass Filter for passive probes.
SLST	Instantly activates or deactivates the log.
SMSKm	Sets the warnings and alarms mask.
SPWDp	Sets Wi-Fi password.
SREBOOT	Reboots the Area Monitor Compact. Restores default configuration.
SRST SRSTR	Restores default configuration and logger rate.
SSIDi	Sets Wi-Fi network ID.
SSTSi	Sets when network iD. Set the reference standard (for EHP-2B model probe only)
SWFIX	Wi-Fi connection.
SWRN s	Sets warning threshold.
Swnik S	

### 10.3 Query commands

Using these commands the AMC can be queried with a series of requests to which the Area Monitor Compact responds. Query commands are characterized by the character **?** in the string.

	TABLE 10-3 Query commands meaning	
?ADR	This query command <b>#LR?ADR*</b> requests the AMC's address that represents the additional prefix that can be set by the User to distinguish a specific Area Monitor Compact. It will be accepted and recognized, by that specific Area Monitor Compact only, in the same way as the lefault prefix "LR" which is always valid for all stations.	
	The reply is a string showing a number between 0 and 99. Example of reply <b>: ADR=00</b> which means that the address of the Area Monitor Compact is 00.	
?ALR	This query command <b>#LR?ALR*</b> requests the Alarm threshold.	
	The reply provides the threshold in the current unit followed by the averaging time, in minutes. When the connected probe is a EHP-2B-xx, it returns the alarm threshold for the Electric Field. When the connected probe is a shaped model, the unit shown is %.	
	Examples of reply: ALR=6.0 uT; 6.00 min. ALR=25000.00%; 30.00 min.	
?ALT	This query command <b>#LR?ALT*</b> requests the relative altitude.	
	The reply provides the altitude in meters relative to the reference position which is acquired when the AMC is switched on or when the SALT command is sent or when a new Log begins. The adopted formula is: $alt=(2.0*1006.0)/(7.0*9.81)*Tk*LN(ref_Press/cur_Press)$	
	Example of reply: ALT=30	
?AMCk	<ul> <li>This query command #LR?AMCk* requests the output status of the Area Monitor Compact. The argument "k" can be as following: <ul> <li>k=B</li> <li>Request Buzzer status</li> <li>k=1</li> <li>Request A1 output status (Pin 2 and 8 on DB15 connector)</li> <li>k=2</li> <li>Request A2 output status (Pin 1 and 7 on DB15 connector)</li> <li>k=R</li> <li>Request Relè output status (Pin 10,12,13,14,15 on DB15 connector)</li> </ul> </li> <li>Example of reply with #LR?AMCR* :</li> </ul>	
	AMCR In this case any alarm is not enable on Relè output	
	Examples of reply with <b>#LR?AMCB*</b> :	
	<b>AMCB-W</b> In this case the Warning level alarm is enable on the Buzzer; whenever the level exceed the threshold set, an acoustic alarm will be emitted.	
	If the "k" index entered is A, all four output status are provided. Examples of reply with <b>#LR?AMCA* :</b> AMCRU AMC2T AMC1V AMCB-W	
	Please, refer to SAMCk para command for Alarm and Warning masking.	
	If the index 'k' entered is not correct or the Area Monitor Compact is not present, the reply is: <b>AMCK=ERR</b>	
	TE See §1.7.1 for User's Port HD-15 female connector pinout list .	

?AMS	This query command <b>#LR?AMS</b> * requests the C4 and C3 input status of the Area Monitor Compact. The format is as follows: AMS=C4[OFF/ON]; C3[OFF/ON];
	ON OFF indicates if the related input is triggered or not.
	Examples of reply with <b>#LR?AMS</b> * AMS:C4=OFF; C3=OFF; <13><10>
?AMV	This query command <b>#LR?AMV</b> * requests the Area Monitor Compact release version and date.
	Examples of reply with #LR?AMV* AMV:A.10;19/01/23<13><10>
	If the Area Monitor Compact is not present, the reply is: AMV:Fail
?ANY	This query command <b>#LR?ANY</b> * requests the device mask for field strength alarm notification. The reply format is: <b>ANY=BLV</b> where: • B = Buzzer;
	<ul> <li>L = Visual Led</li> <li>V = Vibration</li> </ul>
	A dash "-" means that specific Device is not enable.
	Examples of reply : <b>ANY=BL-</b> which means that the field strength alarm will be notify by Buzzer (B) and Visual Led (L) but not with Vibration
?AQ_	This query command <b>#LR?AQ_*</b> requests the Logger settings.
	<ul> <li>The reply format is: AQ_=m; x; t where:</li> <li>m is the Logger acquisition mode: A= AVG; R=RMS; I=Instantaneous</li> <li>x represents the logger rate, in seconds, The minimum value is 1s; the maximum value is 900s in instantaneous mode and it vary according to the AVG or RMS setting (please refer to SAVG command). When x=0, the Logger is disabled. When x=-1, the Logger is triggered only by pressing the Button and, just in case, by the Alarm (please refer to MSK command).</li> <li>t is the Logger format: 32 = compact, 64 = extended</li> </ul>
	Example of reply: <b>AQ_=R</b> ; <b>30</b> ; <b>32</b> which means that the AMC is set to store data every 30 seconds, the averaging is RMS and the Log format is Compact type where each record has a size of 32 bytes and does not contain position information.
?AVG	This query command <b>#LR?AVG</b> * requests the current averaging mode.
	The reply is as follows: <b>AVG=</b> L;R where: L is the averaged time period in minutes R shows the acquisition mode setting: <b>A</b> = AVG; <b>R</b> =RMS
	Example of reply: <b>AVG=6.00;A</b> which means that the AMC is averaging over 6 minutes and the average type is AVG.
?BAT	This query command <b>#LR?BAT</b> * requests the current battery voltage. The reply provides the battery voltage in Volt with 10 mV resolution, formatted as <b>BAT=V.vv</b>
	Example of reply: BAT=3.82

?BDR	This query command <b>#LR?BDR</b> * requests the current Baud Rate of the optical port, where the code returned indicates: <ul> <li>10: 9600 bps</li> <li>11: 38400 bps</li> <li>12: 57600 bps</li> <li>else: 115200 bps</li> </ul> <li>Example of reply: <b>BDR=3</b> which means that the optic serial port is set to 115200 bps.</li>
?BLE	This query command <b>#LR?BLE</b> * requests the status of the Bluetooth Low Energy module. The reply indicates: <b>BLE=ON</b> internal BLE module is switched ON <b>BLE=OFF</b> internal BLE module is switched OFF <b>BLE=WIFI</b> internal BLE module is switched ON in WIFI mode Example of reply: <b>BLE=OFF</b> which means that the internal BLE module is switched OFF.
?CKG	This query command #LR?CKG* requests the status of the GPS module. The reply indicates: 2: GPS locked 1: GPS connection in progress 0: GPS switched OFF 2: GPS not available Example of reply: CKG=0
?CLK	This query command #LR?CLK* requests the date and time to the internal RTC.         The reply provides the requested information formatted as: CLK=HH.mm.ss;DD.MM.YY         • HH: hours         • mm: minutes         • ss: seconds         • DD: day         • MM: month         • YY: year (last two digits)         Example of reply: CLK=20.02.09;19.05.22

?CPS	This query command <b>#LR?CPS</b> * requests the compass and accelerometer readings.
	The reply is formatted as following: <b>Heading:</b> bearing (orientation); <b>G:</b> x; y; z
	Bearing is expressed in degrees and orientation as per the compass rose cardinal points. Gravitational acceleration is expressed in hundredths of g $(cm/s^2)$ for each of the three axes.
	Note: compass heading 0 (North) corresponds to the direction where the GPS antenna is located.
	Note: it is advisable to query this command at a rate lower than 3 times per second.
	Example of reply: Heading: 35 (NE); G:-1; 100; 7
	For Accelerometer axes orientation see §2.7.
?DCM	<ul> <li>This query command #LR?DCM* requests the setting for the preferred wireless communication channel at power on.</li> <li>If DCM=1 or DCM=2, the corresponding wireless communication channel will be kept active for 60 seconds. Any command received via the wireless channel will keep it active for another 60 seconds. Otherwise, at the end of this period, the communication is deactivated. This setting is saved in the internal flash memory.</li> <li>The reply provides the preferred channel at power on, as follows: <ul> <li>DCM=0 for wireless channel disabled at power on;</li> <li>DCM=0 for wireless channel disabled at power on;</li> </ul> </li> </ul>
	<ul> <li>DCM=1 for Wi-Fi communication enabled at power on;</li> <li>DCM=2 for BLE communication enabled at power on.</li> </ul>
	Example of reply: <b>DCM=2</b> which means that each time the AMC will be turned on, the BLE module will be activated.
?GCS	This query command <b>#LR?GCS</b> * requests the Real Time Clock setting status.
	<ul> <li>The reply is as follows:</li> <li>M for manual time setting (refer to SCLT and SCLD commands)</li> <li>A:x for automatic time setting where x is the time zone (integer value between -12 and 12)</li> </ul>
	Examples of reply: GCS=M GCS=A:2 which means that RTC is set manually which means that RTC is set automatically and the time zone is +2 hours corresponding to the time zone of Rome during summertime.

· · · · ·		
	This query command <b>#LR?GPS*</b> requests the latest RMC and GGA NMEA phrases (NMEA 0183 ver 3.01) detected by the internal GPS module. RMC NMEA strings are reported in full, starting with <b>\$GPRMC</b> and/or <b>\$GNRMC</b> , and ending with the checksum followed by CR LF.	
	GGA NMEA strings are reported in full, starting with <b>\$GPGGA</b> and/or <b>\$GNGGA</b> , and ending with the checksum followed by CR LF.	
	When a position has not yet been acquired, the reply is:VOID	
	Example of reply: \$GPRMC,154452.000,A,4404.4843,N,01047.9412,E,0.28,152.18,270122,,,A*6E \$GPGGA,154453.000,4341.1507,N,01047.9413,E,1,7,1.00,6.2,M,47.8,M,,*5B	
	The format for NMEA coordinates is ddmm.mmmm (d=degrees and m=minutes); The NMEA degrees minutes can be convert to decimal degree as follows: $4404.4843 \rightarrow$ Take the NMEA Latitude position.	
	0.4843 * 60 = 29.058 → Multiply by 60 the NMEA Latitude second part. 440429.058 → The product is added to the NMEA Latitude first part for making 6 digits long first part. 04 * 60 = 240 → Take the second two digits of the first part and multiply by 60. (240+29.058)/3600=0.074738 → The product is added to the last first part and the total divided by 3600. 44+0.074738 → Add the result to the first two digits. The total is Latitude expressed in decimal degree.	
?IDN	This query command <b>#LR?IDN</b> * requests the AMC's identifier.	
	The reply provides the Area Monitor Compact's name followed by the serial number, in the format: IDN=name;S/N where name is the identification string stored with command SIDN, and	
	S/N is the serial number of the Area Monitor Compact, factory stored.	
	Example of reply: IDN=Cisano;000WE20501	
?IDNF	This query command <b>#LR?IDNF</b> * requests the extended AMC's identifier .	
	<ul> <li>The reply provides the Area Monitor's name followed by additional information as follows:</li> <li>name</li> <li>model</li> <li>firmware release</li> <li>Serial Number</li> <li>A semicolon ; is used as separator between fields.</li> </ul>	
	The format is: <b>IDN=</b> name;model;R.rr MM/YY;S/N Where: Name is the identification string stored with command SIDN, Model is the type of the Area Monitor Compact, R.rr shows the firmware version and MM/YY its date of release, S/N is the serial number of the Area Monitor Compact, factory stored.	
	Example of reply: <b>IDN=Cisano;LR01;A0.0 10/21;000WE20501</b> which identifies the AMC named Cisano, model LR-01, with firmware version A0.0 released on October 2021. Its serial number is 000WE20501.	
?KFR	<ul> <li>This query command #LR?KFR* requests the setting for the correction depending on the frequency. The reply is:</li> <li>KFR=OFF when the correction is not active</li> <li>KFR=NA when the correction is not available</li> <li>KFR=f;[fH] u when the correction is active for frequency f expressed in the unit u. if an Electric and Magnetic probe is connected, also the frequency for magnetic measurement is shown.</li> </ul>	
	Examples of reply: KFR=6.500 MHz KFR=6.500;1.000 MHz	

?LFA[S]	This query command <b>#LR?LFA</b> * requests the latest average field value. The reply provides the value (or values) with current unit, followed by the averaging period in minutes (the same as per AVG command).
	When a passive probe is installed, the command provides the field levels of the three axes, followed by the total value.
	When the special probe EP-333 (RMS type) is in use, the command provides the RMS level.
	When the Electric and Magnetic Field probe EHP-2B-xx is installed, the command provides the levels for both fields.
	Examples of reply: LFA= V/m;58.56;58.56;58.56;101.43;1 min. which means that the average level for the latest 1 minute is 58.56 V/m for each of the three axes, X, Y, Z with a total of 101.43 V/m.
	<b>LFA= V/m;1.23; 0.868 uT; 6 min.</b> which means that the average field level for the latest 6 minuts is 0.868 $\mu$ T (H) and 1.23 V/m (E).
?LOG	This query command <b>#LR?LOG*</b> requests the binary Log file.
	NOTE: It works via USB and Optic port only. Please, refer to command ?WLOG to download data via one of the wireless connections.
	The reply starts with string <b>LOG_S</b> and is terminated by the string <b>LOG_E</b> . The first 128 bytes (LOG_S included) represent the header; the following data represent the records of 32 (or 64) bytes each.
	Please, refer to the binary Log file paragraph at the end of this chapter for further details about the binary file.
?LPF	This query command <b>#LR?LPF</b> * requests Low Pass Filter setting for passive probes.
	<ul> <li>The reply is the index value, for the selected filter, related to the list:</li> <li>0: 10 Hz</li> <li>1: 20 Hz</li> <li>2: 40 Hz (default)</li> <li>3: 80 Hz</li> </ul>
	Example of reply: LPF=2 which means that a 40 Hz low pass filter is applied.
?LST	This query command <b>#LR?LST</b> * requests the Logger status.
	The reply is: • LST=1 Logger active • LST=0 Logger disabled
	Example of reply: LST=1 which means that the Logger function is running.
?MAC	This query command <b>#LR?MAC*</b> requests the Wireless MAC address assigned by the manufacturer.
	Example of reply: MAC=60:8A:10:D2:71:02

?MES	This query command <b>#LR?MES</b> * requests the instantaneous (not averaged) field level.
	The reply is the elementary value for each band, in the format:
	Three-band probe:
	<ul> <li>MES=W;L;H;V/m; where:</li> </ul>
	• W is the wideband probe field level;
	<ul> <li>L is the low-pass probe field level (e.g. &lt; 862 MHz)</li> </ul>
	<ul> <li>H is the high-pass probe field level (e.g. &gt; 933 MHz)</li> </ul>
	V/m is the measurement unit label
	Four-band probe:
	• MES=W;A;B;C;V/m; where:
	W is the wideband probe field level;
	A is the band-1 probe field level (e.g. 2140 MHz)
	B is the band-2 probe field level (e.g. 1800 MHz)
	C is the band-3 probe field level (e.g. 900 MHz)
	V/m is the measurement unit label
	Single-band probe:
	MES=W;;V/m; where:
	W is the field level;
	V/m is the measurement unit label
	Passive probe:
	MES=T;X;Y;Z;U where:
	T is the Total field level;
	• X is the X axes field level;
	• Y is the Y axes field level;
	• Z is the Z axes field level;
	U is the measurement unit label
	Electric and Magnetic probe EHP-2B-xx:
	MES=E;H;%; where:
	E. is the Electric field level;
	H is the Magnetic field level;
	% is the measurement unit label
	It should be noted that, due to the delay for data transfer from Probe -> AMC -> Optic, USB, Ethernet, Wireless, the reading refers to the acquisition value of the previous sampling (minimum $\geq$ 3 seconds, maximum < 6 seconds).
	Example of reply: MES=10.76; ; V/m;

?MESS	This query command <b>#LR?MESS</b> * activates the continued issuing of the instantaneous (not averaged) field level.
	The reply is the elementary value for each band, like ?MES command, but with enabling for the continuous data transfer as soon as they are available, in the format:
	This command can be useful, for example, to be able to record separately all the elementary data used by the AMC.
	<ul> <li>Three-band probe:</li> <li>MES=W;L;H;V/m; where:</li> <li>W is the wideband probe field level;</li> <li>L is the low-pass probe field level (e.g. &lt; 862 MHz)</li> <li>H is the high-pass probe field level (e.g. &gt; 933 MHz)</li> <li>V/m is the measurement unit label</li> </ul>
	<ul> <li>Four-band probe:</li> <li>MES=W;A;B;C;V/m; where:</li> <li>W is the wideband probe field level;</li> <li>A is the band-1 probe field level (e.g. 2140 MHz)</li> <li>B is the band-2 probe field level (e.g. 1800 MHz)</li> </ul>
	<ul> <li>C is the band-3 probe field level (e.g. 900 MHz)</li> <li>V/m is the measurement unit label</li> <li>Single-band probe: <ul> <li>MES=W;;V/m; where:</li> <li>W is the field level;</li> </ul> </li> </ul>
	<ul> <li>V/m is the measurement unit label</li> <li>Passive probe:</li> <li>MES=T;X;Y;Z;U where:</li> <li>T is the Total field level;</li> </ul>
	<ul> <li>X is the X axes field level;</li> <li>Y is the Y axes field level;</li> <li>Z is the Z axes field level;</li> <li>U is the measurement unit label</li> </ul>
	<ul> <li>Electric and Magnetic probe EHP-2B-xx:</li> <li>MES=E;H;%; where:</li> <li>E. is the Electric field level;</li> <li>H is the Magnetic field level;</li> <li>% is the measurement unit label</li> </ul>
	The reply is terminated by the string ">" followed by date and time from the AMC.
	Example of reply: MES=7.81;4.42;4.65;7.81 V/m; 3.77V; ;;>28/01/22 09:26:36*
	Note: to disable the continuous transmission, simply send command ?MESs

?MESR[v]	This query command <b>#LR?MESR</b> * activates the continued issuing of the instantaneous (not averaged) field level with position (GPS) and other sensors (compass, thermometer, hygrometer, barometer, accelerometer) information.
	The reply is the elementary value for each band, like ?MES command, plus GPS (and sensors) information, with enabling for the continuous data transfer as soon as they are available, in the following format.
	This command can be useful, for example, to be able to record separately all the elementary data used by the AMC.
	Three-band probe: • MES=W;L;H;V/m; where: • W is the wideband probe field level; • L is the low-pass probe field level (e.g. < 862 MHz) • H is the high-pass probe field level (e.g. > 933 MHz) • V/m is the measurement unit label Four-band probe: • MES=W;A;B;C;V/m; where: • W is the wideband probe field level; (e.g. 2140 MHz) • A is the band-1 probe field level (e.g. 2140 MHz) • B is the band-2 probe field level (e.g. 1800 MHz) • C is the band-3 probe field level (e.g. 900 MHz) • V/m is the measurement unit label Single-band probe: • MES=W;;V/m; where: • W is the field level; • V/m is the measurement unit label Passive probe: • MES=T;X;Y;Z;U where: • T is the Total field level; • X is the X axes field level; • Z is the Z axes field level; • U is the measurement unit label Electric and Magnetic probe EHP-2B-xx: • MES=E;H;%; where: • E. is the Electric field level; • H is the Magnetic field level; • Wis the measurement unit label

	<ul> <li>Following is the standard NMEA GPRMC and/or GNRMC string that reports the information: <ul> <li>Time (UTC)</li> <li>Navigation receiver warning A = OK, V = warning</li> <li>Latitude (deg. min North/South)</li> <li>Longitude (deg. min East/West)</li> <li>Speed over ground (Knots)</li> <li>Course Made Good</li> <li>Date (UTC)</li> <li>Magnetic variation (deg)</li> <li>Mandatory checksum</li> </ul> </li> <li>Following is the standard NMEA GPGGA and/or GNGGA string that reports the information: <ul> <li>Time (UTC)</li> <li>Magnetic variation (deg)</li> <li>Mandatory checksum</li> </ul> </li> <li>Following is the standard NMEA GPGGA and/or GNGGA string that reports the information: <ul> <li>Time (UTC)</li> <li>Latitude (deg. min North/South)</li> <li>Longitude (deg. min East/West)</li> <li>Position Fix</li> <li>Satellites in use</li> <li>Horizontal Dilution of Precision</li> <li>MSL Altitude in m</li> <li>Geoid Separation in m</li> <li>Mandatory checksum</li> </ul> </li> <li>The reply is terminated by the string "&gt;" followed by date and time from the AMC.</li> <li>Example of reply: MES=10.66; ; V/m; 3.53V;</li> <li>\$GPGGA,144551.000,4341.1465,N,01047.9383,E,1.38,185.31,280122,,,A*67</li> <li>;\$GPGGGA,144551.000,4341.1462,N,01047.9386,E,1,6,1.29,16.9,M,47.8,M,*60</li> <li>;&gt;28/01/22 15:45:50*</li> </ul> The NMEA degrees minutes can be convert to decimal degree (see ?GPS command). Note: to disable the continuous transmission, simply send command ?MESs Adding the "v" character, so that the command becomes ?MESRy, it is possible to include in the automatic response string the additional values of heading (degrees), acceleration (g), temperature (° C) and humidity (%) Evample of reply: MES=10.69; LV/m; 2 E2V.
	Example of reply: MES=10.68; ; V/m; 3.53V; \$GPRMC,144457.000,A,4341.1494,N,01047.9397,E,0.21,191.83,280122,,,A*6F ;\$GPGGA,144458.000,4341.1493,N,01047.9397,E,1,6,1.30,16.4,M,47.8,M,,*63 ;Heading: 164 (S); g:-15; 76; 68;24.95;36.41*;>28/01/22 15:44:57*
?MESf[v]	Same as ?MESR[v] command but with single reply.
?MESs	This query command <b>#LR?MESs</b> * disables the continuous data transmission set with ?MESS, ?MESR or ?MESRv commands. It produces a single reply as per the ?MES command.

?MSK	This query command <b>#LR?MSK</b> * requests the alarms Mask.
	The reply provides a string with every armed alarm, with the format:
	MSK=AWUVPTCawvp SERIAL ALRTRG
	<ul> <li>where the meaning of the symbols is similar to the ?STA command, as follows:</li> <li>A = Field Level exceeded Alarm;</li> </ul>
	<ul> <li>W = Field Level exceeded Marring;</li> </ul>
	<ul> <li>U = USB cable connected Alarm;</li> </ul>
	<ul> <li>V = Low Battery Alarm;</li> </ul>
	<ul> <li>P = Probe failure Alarm;</li> </ul>
	<ul> <li>T = OverTemperature Alarm;</li> </ul>
	<ul> <li>C = Relative Humidity Alarm;</li> </ul>
	<ul> <li>a = end of Field Level Alarm situation;</li> </ul>
	<ul> <li>w = end of Field Level Warning situation;</li> </ul>
	• v = end of Low Battery Alarm;
	• p = end of Probe Alarm;
	• SERIAL = Alarms or logger transmission enabled via the serial port
	<ul> <li>ALRTRG = any Alarm or warning triggers the Logger, if enabled.</li> </ul>
	A dash "-" means that specific Alarm (or warning) is not armed.
	The presence of the "SERIAL" string means that any Alarm will be transmitted via the serial port (optical and USB) formatted as the reply to ?STA command.
	If the LOGGER is active, the presence of the "SERIAL" string means that the binary data, relating to each single acquisition, will be sent to the serial port. The presence of the ALRTRG string means that, if the LOGGER is active, the alarm triggers the saving of the measurement record, either on a time basis (AQ_ with a rate greater than zero) or continuously (AQ_ with a rate of -1).
	Example: <b>MSK=AW-VPTCawvp</b> which means that all Alarms and warnings are armed, except for the USB cable connection Alarm. They are not sent automatically via the serial port. The Logger is not triggered by alarms.
?NET	This query command <b>#LR?NET</b> * requests the list of the Wi-Fi networks available.
	Note: to work, the command needs the module to have been powered up via the SWFI command. If not so, the unit replies with: <b>NET=ERR.</b>
	Example of reply: NET=OK
	[] SSID:Redmi Note 8 Pro -41dB
	[X] SSID:FRITZ!Box 7490 -79dB
	[] SSID:DWR-921-B5BC -83dB
	[] SSID:TP-LINK_F788 -67dB
	[X] mark indicates the default network but not the successful connection.
	Please refer to command ?WFI to find out the connection status.

?PRB	This query command <b>#LR?PRB</b> * requests information of the connected probe.
	The reply provides probe model, latest calibration date, measurement unit, divider in the following format:
	<ul> <li>Three-band probe: PRB=Name:Dd.Mm.Yy; Unit:Divider:Range:MinLevel:MinFreq:MaxFreq:CorrFreqUnit</li> </ul>
	<ul> <li>Four-band probe: PRB=Name:Dd.Mm.Yy;</li> </ul>
	Unit:Divider:Range:MinLevelWide:MinFreq:MaxFreq:CorrFreqUnit:4:MinLevelSubBand
	Single-band probe:     DDD. Name: Dd Mm Vin Unit: Dividen: Denne: Mint evel/MinEregy Mey/Eregy Com/Eregy Init: C
	<ul> <li>PRB=Name:Dd.Mm.Yy; Unit:Divider:Range:MinLevel:MinFreq:MaxFreq:CorrFreqUnit:S</li> <li>Electric and Magnetic probe EHP-2B-xx: PRB=Name:Dd.Mm.Yy;</li> </ul>
	Unit:Divider:RangeE:MinLevelE:MinFreqE:MaxFreqE:RangeH:MinLevelH:MinFreqH:MaxFreq H:CorrFreqUnit:S
	Note: If the correction in frequency is not available, CorrFreqUnit field will be "".
	Examples of reply:
	PRB=EP-3B-01:14.09.15; V/m:100.00:200.00:0.20:0.09:3000.00:MHz PRB=EP-4B-02:08.07.19; V/m:10.00:200.00:0.10:0.09:3000.00:MHz:4:0.02
	PRB=HP-1B-01:15.07.19; uT :100.00:200.00:0.04:9.99:5000.00:Hz :S
	PRB=EP745:04.10.19; V/m:100.00:450.00:0.35:0.09:7000.00:MHz:S
	PRB=EP645:15.07.09; V/m:10.00:360.00:0.01:0.09:3000.00:MHz:S PRB=EHP-2B-03:12.09.22;%:10.00:1000.00:0.10:4.99:9250.00:1000.00:0.50:1.00:1000.00:MHz:S
	THE_EN 25 00.12.00.22, /0.10.00.1000.00.0.10.4.00.0200.00.1000.00.00.1000.10
?S/N0	This query command <b>#LR?S/N0</b> * requests the serial number of the AMC.
	Example of reply: S/N0=000WE20501
?SID	This query command <b>#LR?SID</b> * requests the Wi-Fi network Service Set Identifier, that is to say the name stored in memory.
	Reply: SID=stringSSID
	When a network name has not yet been stored, the <i>stringSSID</i> corresponds to DEMO_AP
	Example of reply: SID=Redmi Note 8 Pro

?SNS	This query command <b>#LR?SNS</b> * requests data from the environmental sensor.
	The reply, in the format SNS=T;H;P provides:
	• T: Temperature, in Celsius degrees (°C)
	<ul> <li>H: Relative Humidity in percentage (%)</li> <li>P: Atmospheric Pressure (hPa)</li> </ul>
	• F. Autospheric Flessure (IFa)
	Example of reply: SNS=23.9;38.8;1013.6
?SST	This query command <b>#LR?SST</b> * requests the level of the signal for the wireless channel.
	The reply is in the format:
	SST=I where I is the RSSI value, expressed in dBm, for the wireless network which the
	AMC is connected to. When no network is detected, or the Area Monitor is disconnected, it returns SST=ERR
	Example of reply: SST=-67
?STA	This query command <b>#LR?STA</b> * requests the alarms status, regardless of the MSK setting.
	<ul> <li>The reply provides a string showing the following labels: STA=AWUVPTCawvp</li> <li>W: Warning level exceeded;</li> <li>A= ALARM threshold exceeded;</li> <li>w= end of Warning situation;</li> <li>a= end of Alarm situation;</li> <li>P= Probe failure ALARM;</li> <li>p= end of Probe Alarm;</li> <li>V= Low Battery ALARM;</li> <li>v= end of Low Battery Alarm;</li> <li>T= OverTemperature ALARM;</li> <li>U= USB Connection Warning;</li> <li>C= Relative Humidity ALARM</li> <li>Note: each alarm is replaced by dash "-" when not active.</li> </ul> Note: when an EHP-2B-xx probe is connected, "A" refers to the alarm in field E while "W" refers to the alarm in field H.
	Please, refer to ?MSK command for alarm masking. Example of reply: <b>STA=-W-V</b> which means that the alarms for Field level Warning and for Low Battery voltage are active. The probe has just detected a level exceeding the warning threshold and the battery voltage is lower than 3.0 V, that is to say it is almost exhausted.

<u> </u>	
?STM	This query command <b>#LR?STM</b> * requests the active alarms condition.
	The reply provides a string showing the active alarms (they must be activated by SMSK command) as following: STA=AWUVPTCawvp W: Warning level exceeded; A = ALARM threshold exceeded; w = end of Warning situation; a = end of Alarm situation; P = Probe failure ALARM; p = end of Probe Alarm; V = Low Battery ALARM; v = end of Low Battery Alarm; T = OverTemperature ALARM; U = USB Connection Warning; C = Relative Humidity ALARM Note: each alarm is replaced by dash "-" when not active. Note: when an EHP-2B-xx probe is connected, "A" refers to the alarm in field E while "W" refers to the alarm in field H. Please, refer to ?MSK command for alarm masking. Example of reply: STA=-W-V which means that the alarms for Field level Warning and for Low Battery voltage are active. The probe has just detected a level exceeding the warning threshold and the battery voltage is lower than 3.0 V, that is to say it is almost exhausted.
?STS	This query command <b>#LR?STS</b> * requests the index of the standard for EHP-2B-xx probes.
(for EHP-2B	The reply is in the format:
model	SST=i where i is index of the covered standards list.
probe only)	This value affects Alarms and Warnings, the value saved in the log and the reply to the ?MES command.
	Example of reply: STS=1
?TMP	This query command <b>#LR?TMP</b> * requests temperature and humidity to the AMC.
	<ul> <li>The reply, in the format TMP=T;H provides:</li> <li>T: Temperature, in Celsius degrees (°C)</li> <li>H: Relative Humidity in percentage (%)</li> </ul>
	Example of reply: TMP=23.9;38.8

?VST[V]	This query command <b>#LR?VST</b> * requests the power supply status.
	<ul> <li>The reply provides the code as follows:</li> <li>0 for battery supply</li> <li>1 for external supply connected and battery charge completed</li> <li>2 for external supply connected and battery under charging</li> </ul>
	Example of reply: <b>VST=1</b> which indicates the external 5V supply is connected and the battery is fully charged.
	Note: it is possible to obtain the information including the description, issuing the command <b>#LR?VSTV*</b>
	Example of reply: VST=0 (Battery)
?WFI	This query command <b>#LR?WFI</b> * requests the status of the Wi-Fi module
	<ul> <li>The reply is as follows:</li> <li>WFI=OFF when the module is switched OFF;</li> <li>WFI=BLE when the Bluetooth LE is active;</li> <li>WFI=ON     SSID : stringSSID     Signal Strenght : dBm     Local IP Address : IPv4_Address:Port</li> </ul>
	If no IP address has yet been assigned to the AMC, or it has not been possible to connect to the network, Local IP Address shows "waiting for connection".
	Examples of reply: WFI=ON SSID : Redmi Note 11 Signal Strenght : -87 Local IP Address : 192.168.0.21:6666 Which means that the AMC is connected to the Redmi Note 11 Wi-Fi network. The radio signal strength is -87 dBm and the assigned IP address is 192.168.0.21. The connection is through the port 6666.
?WLOG	This query command <b>#LR?WLOG*</b> requests the binary Log file via wireless communication.
	NOTE: It works via BLE and Wi-Fi ports only. Please, refer to command ?LOG to download data via fiber optic or USB connection.
	The reply starts with string <b>LOG_S</b> and is terminated by the string <b>LOG_E</b> . The first 128 bytes (LOG_S included) represent the header; the following data represent the records of 32 (or 64) bytes each.
	Please, refer to the binary Log file paragraph at the end of this chapter for further details about the binary file.

<b>?WME</b> if∨ (for	This query command <b>#LR?WME</b> i* requests the instantaneous % level related to the desired standard.
EHP-2B model probe only)	i=1: Reference Standard (same reading as per ?MES command) i=2: Standard 2 i=3: Standard 3 i=4: Standard 4
	The order of the standards is: - for 01/02/05/06 model: ICNIRP98OCC, ICNIRP98GP, SC6CONTR, SC6UNCONTR. - for 03/04/07/08 model ICNIRP2020OCC, ICNIRP2020GP, FCCCONTR, FCCUNCONTR.
	<ul> <li>The reply is in the format:</li> <li>WME=E.EE;H.HH;Unit;*; where:</li> <li>E.EE is the value for the Electric field;</li> <li>H.HH is the value for the Magnetic field</li> <li>Unit % is the measurement unit label (the "%" change in "&amp;" when the frequency correction is enabled and the percentage indication is linear rather than quadratic)</li> </ul>
	WME=NA for probes other than EHP-2B-xx
	Example of reply: WME=45.96;2137.43;%;*; which indicates the E field is at almost 46%, H field is 2137% of the selected standard.
	By adding the ${\bf f}$ character after the index ${\bf i}$ , it is possible to include battery voltage and GPS data to the reply.
	<ul> <li>Following is the standard NMEA GPRMC and/or GNRMC string that reports the information:</li> <li>Time (UTC)</li> <li>Navigation receiver warning A = OK, V = warning</li> <li>Latitude (deg. min North/South)</li> <li>Longitude (deg. min East/West)</li> <li>Speed over ground (Knots)</li> <li>Course Made Good</li> <li>Date (UTC)</li> <li>Magnetic variation (deg)</li> <li>Mandatory checksum</li> <li>Following is the standard NMEA GPGGA and/or GNGGA string that reports the information:</li> <li>Time (UTC)</li> <li>Latitude (deg. min North/South)</li> <li>Longitude (deg. min East/West)</li> <li>Position Fix</li> <li>Satellites in use</li> <li>Horizontal Dilution of Precision</li> <li>MSL Altitude in m</li> <li>Geoid Separation in m</li> <li>Mandatory checksum</li> </ul>
	The reply is terminated by the string ">" followed by date and time from the AMC. Example of reply: WME=46.13;1969.20;%;*;3.78V; \$GPRMC,162842.710,A,4341.1585,N,01047.9364,E,0.09,255.44,190822,,,A*69 ;\$GPGGA,162842.710,4341.1585,N,01047.9364,E,1,9,0.99,38.3,M,47.8,M,,*6A
	;>23/09/22 00:07:00*
	The NMEA degrees minutes can be convert to decimal degree (see ?GPS command)
10-20	Command protocol

	Adding the "v" character, at the end of the command, so that it becomes <b>?WMEifv</b> , it is possible to include in the reply string the additional values of heading (degrees), acceleration (g), temperature (° C) and humidity (%) Example of reply: WME=46.47;1930.61;%;*;3.79V; <b>\$GPRMC</b> ,163230.000,A,4341.1574,N,01047.9386,E,0.01,25.87,190822,,,D*54 ; <b>\$GPGGA</b> ,163305.992,,,,,0,3,,,M,,M,,,*4B ; <b>Heading</b> : 209 (SW); G:18; -97; 48;0.00;0.00*;>24/09/22 00:11:23*
?WRN	This query command <b>#LR?WRN</b> * requests the Warning threshold.
	The reply provides the threshold in the current unit followed by the averaging time, in minutes. When the connected probe is a EHP-2B-xx, it returns the alarm threshold for the Magnetic Field.
	When the connected probe is a shaped model, the unit shown is %.
	Examples of reply: WRN=6.0 uT; 6.00 min. WRN=25000.00%; 30.00 min.
?WVR	This query command <b>#LR?WVR</b> * requests the firmware version of the WIFI+BLE WINC3400 internal module.
	The reply format is as follows: WVR=Major.Minor.Patch BuildDate BuildTime
	Note: to work, the command requires that the module has been turned on via one of the two SBLE or SWFI commands. Otherwise, it returns the reply: <b>WVR=ERR.</b>
	Example of reply: WVR=1.3.1 Jun 28 2019 13:46:26
L	

### **10.4 Setting commands** These commands are intended for making settings on the AMC.

	TABLE 9-4 Setting commands meaning	
<b>SADR</b> a	<ul> <li>This setting command sets the specific address for the AMC.</li> <li>It represents the additional prefix that will be accepted and recognized by that specific Area Monitor only, in the same way as the default prefix "LR" which is always valid for all stations.</li> <li>The reply is:</li> <li>ADR=OK if the command has been granted ADR=ERR if the command has been refused</li> <li>Note: the address must be a numeric, two digits, value between 00 and 99.</li> <li>Example: #LRSADR00* which means that the address of the AMC will be 00.</li> </ul>	
SALRs	This setting command sets the Alarm threshold. Argument s is the threshold value, expressed in the current unit. When the connected probe is a EHP-2B-xx, it refers to the Electric Field. When the connected probe is a shaped model, the unit is %.	
	The reply is the same as per ?ALR command. Example: <b>#LRSALR6</b> * which means the new Alarm threshold will be 6 in the current unit.	
SALT	This setting command resets the reference altitude. Just after having issued the command, the altitude at that location will be 0 meters. The reply is: ALT=OK if the command has been granted ALT=ERR if the command has been refused Example: <b>#LRSALT</b> *	
SANY	<ul> <li>The setting command #LRSANY k* allows the user to set which device(s) should be enabled for field strength alarm notification.</li> <li>The argument "k" can be as following: <ul> <li>B = Buzzer;</li> <li>L = Visual Led</li> <li>V = Vibration</li> </ul> </li> <li>For example, the command #LRSANY BL* enable the Buzzer and Visual Led to notify field strength alarm but not the Vibration; the reply is: ANY=BL-*</li> <li>A dash "-" means that specific Device is not enable.</li> <li>If the index 'k' entered is not correct, the reply is: ANY=SERR</li> <li>The command SANY will take effect only if sent before the field strength alarm to the vibration on the vibration of the field strength alarm</li> </ul>	
	notification.	

SAQ_m;x;t	This setting command sets the Logger parameters.
	Argument <b>m</b> represents the Logger acquisition mode: <b>I</b> =Instantaneous and <b>M</b> =Average. The Average time and type are settable by SAVG command and the alarm is compared on it.
	Argument <b>x</b> represents the storing rate in seconds. The minimum value is 1s; the maximum value is 900s in instantaneous mode and it vary according to the AVG or RMS settings (please refer to SAVG command). If <b>x</b> is set to <b>-1</b> , the Logger is activated but the trigger event becomes the pressing of the button or, if enabled (SMSK L), the exceeding of the alarm threshold. In other words, when x=-1 the logger does not have a fixed time rate. Please refer to command SMSK for the Alarm Mask and SALR for the field level threshold. If the Logger rate <b>x</b> is greater than <b>0</b> , and the logger is armed on crossing the alarm
	threshold (SMSK L), the log is carried out with the predetermined time interval and only if the alarm threshold has been exceeded. If the Logger rate <b>x=0</b> disables the Logger.
	<ul> <li>Argument t represents the Logger format.</li> <li>t=32 selects the compact version of the log, with no position information. Each record occupies 32 bytes.</li> <li>t=64 selects the extended versione of the log, complete of GPS data. Each record takes 64 bytes.</li> </ul>
	The reply is the same as per ?AQ_ command. Example: <b>#LRSAQ_M;30;32</b> * which means that the Logger type is logger is set to save a measurement every 30 seconds, of the compact type (32 bytes).
	If it is set that the alarm is also generated on the <b>serial port</b> (S field in the SMSK command), the binary file corresponding to the record is sent to the serial port at the preset logger rate.
	Note: setting the Logger via the SAQ_ command does not correspond to the actual start of the Logger, which instead occurs by pressing the button for more than 5 seconds, or via the SLST 1 command. This event erases the entire memory and the previously acquired logs are deleted.
	The Log remains active until the AMC is turned off or the maximum number of storable records is reached. This number depends on the Log format; i.e. 125k in compact mode and 250k in extended.

SAVGI;r	This setting command sets the averaging time and type.
	<ul> <li>I is the time length in minutes, between 0.25 and 30 with 0.25 minutes resolution up to 1 minute; 1 minute up to 15 minutes and always 30 minutes over 15.</li> <li>r is the averaging type. A for AVG, R for RMS .</li> </ul>
	Example: <b>#LRSAVG1;R*</b> which means the unit is set to average over 1 minute with a RMS average type.
	The reply is the same as per ?AVG command.
SBDR b	This setting command sets the optic serial port speed. The parameter b is a code for the bit rate; in details: • b=10: 9600 bps • b=11: 38400 bps • b=12: 57600 bps • else: 115200 bps
	The reply is: BDR=OK if the command has been granted BDR=ERR if the command has been refused
	Example: <b>#LRSBDR 10</b> * which means the optical port speed is set to 9600 bps.
	Default speed is 115200 bps. The parameter is kept also when the AMC is switched OFF. Like other essential settings, it can be reset when the Area Monitor Compact is turned on by keeping the button pressed.
SBLEx	<ul> <li>This setting command switches the internal BLE (Bluetooth Low Energy) module ON or OFF as following:</li> <li>x = ON: switches the module ON and starts the "advertising" procedure, making the unit visible to other Bluetooth devices.</li> <li>x = OFF closes any open channel and turns OFF the module.</li> </ul>
	Once the pairing process has started, the password to connect is "123456".
	The reply BLE=OK indicates that the command has been granted.
	Example: <b>#LRBLEOFF</b> * which means that any open wireless channel will be closed and the module will be turned off.
	If the Wireless firmware release is older than 1.3.0, the reply is preceded by the string: ***WARNING LEGACY WIRELESS FIRMWARE***\r\n

SCLDd.m.y	<ul> <li>This setting command sets the date of the Real Time Clock.</li> <li>Each parameter must be two digits, as following: <ul> <li>d is the day (01 to 31)</li> <li>m is the month (01 to 12)</li> <li>y is the year (00 to 99)</li> </ul> </li> <li>The reply is the same as per ?CLK command.</li> <li>Example: #LRSCLD31.05.22* which means that the RTC date will be set to May, 31th 2022.</li> </ul>
SCLTh.m.s	<ul> <li>This setting command sets the time of the Real Time Clock.</li> <li>Each parameter must be two digits, as following: <ul> <li>h for hours (00 to 23)</li> <li>m for minutes (00 to 59)</li> <li>s for seconds (00 to 59)</li> </ul> </li> <li>The reply is the same as per ?CLK command.</li> <li>Example: #LRSCLT16.25.00* which means that the RTC time will be set to 4:25 PM.</li> </ul>
SCPCt	This setting command is used to start the compass calibration procedure. In order for the compass to be accurate, it must first be calibrated using the appropriate command where t is the calibration time in seconds. During this period, the unit must be oriented in all possible directions in order to extrapolate the magnetic offset. A count down is displayed on the terminal to help understanding both the frequency of the readings and the time left. Calibration is stored in the internal flash memory. A typical reply is: Compass found (code 0xC7): Magnetometer calibration: Please rotate the device next 30 seconds ( 90 Readings) 89 88 87  0 Calibration Done Then calibration data for debug purposes are added. Note: compass heading 0 (North) corresponds to the direction where the GPS antenna is located. Example: <b>#LRSCPC30*</b> which means that the RTC time will be set to 4:25 PM.

<b>SDCM</b> c	This acting command calcots the wireless communication channel active at newer on ac
SDCMC	This setting command selects the wireless communication channel active at power on, as follows:
	<ul> <li>c=0 to disable all wireless channels at power on;</li> </ul>
	<ul> <li>c=1 to enable Wi-Fi module at power on;</li> </ul>
	<ul> <li>c=2 to enable BLE module at power on.</li> </ul>
	If DCM=1 or DCM=2, the corresponding wireless communication channel will be kept active for 60 seconds. Any command received via the wireless channel will keep it active for another 60 seconds. Otherwise, at the end of this period, the communication is deactivated. This setting is saved in the internal flash memory.
	Note: before any setting, with the AMC blank, the communication is enabled, by default, on both channels.
	The reply DCM=OK indicates that the command has been granted.
	Example: <b>#LRSDCM1</b> * which means that each time the AMC will be turned on, the Wi-Fi module will be automatically activated.
SGCSAh	This setting command selects the automatic RTC synchronization, taking advantage of
	the GPS signal. The argument h represents the time zone, an integer value in hours between -12 and 12. Please set your Country time zone and pay attention to the possible daylight saving time.
	The reply is:
	GCS=OK if the command has been granted
	GCS ERROR if the command has been refused (e.g. the value was out of range). In this case the RTC will be set for manual update.
	The success of the RTC update operation depends on the quality of the GPS signal received. Each time the clock update operation is successful, the complete list of all available events is updated with a string like: Auto Set:hh:mm:ss;dd/mm/yy
	Example: <b>#LRSGCSA2</b> * which sets the automatic RTC synchronization, using GPS module and a +2 hours time zone (Rome, in summer time).
	Note: the command for manual RTC setting is SGCSM
SGCSM	This setting command <b>#LRSGCSM</b> selects the manual RTC update. Choosing this mode, time and date must be set using SCLT and SCLD commands.
	The reply GCS=OK indicates that the command has been granted.
	Example: <b>#LRSGCSM</b> * which sets the manualc RTC setting.
	Note: the command for automatic RTC setting is SGCSA

SGOF	This setting command switches immediately off the internal GPS module.
	The reply GOF=OK indicates that the command has been granted.
	Example: <b>#LRSGOF</b> *
SGOOFF	This setting command turns immediately off the AMC.
	Note: since the Area Monitor goes suddenly off after having received the command, no reply is returned.
	Example: <b>#LRSGOOFF</b> *
SGOI	This setting command turns immediately on the internal GPS module. It will stay on up to the first FIX or until the timeout of 4 minutes will expire.
	The reply GOI=OK indicates that the command has been granted.
	Example: <b>#LRSGOI*</b>
SAMCk para	<ul> <li>The setting command #LRSAMCk para* set the output of the Area Monitor Compact and the alarm on which the output self works .</li> <li>The argument "k" can be as following: <ul> <li>k=B Set Buzzer</li> <li>k=1 Set A1 output (Pin 8 and 12 of DB15 connector)</li> <li>k=2 Set A2 output (Pin 7 and 11 of DB15 connector)</li> <li>k=R Set Relè output (Pin 2, 3, 4, 5, 10 of DB15 connector)</li> </ul> </li> </ul>
	<ul> <li>The parameter "para" allows user to set which alarm should be enabled:</li> <li>W= Warning level exceeded</li> <li>A= ALARM threshold exceeded</li> <li>P= Probe failure ALARM</li> <li>V= Low Battery ALARM</li> <li>T= OverTemperature ALARM</li> <li>C= Relative Humidity ALARM</li> <li>U= USB Connection Warning</li> </ul>
	For example, the command <b>#LRSAMCB WT</b> * enable the Warning Level and Alarm OverTemperature on the Buzzer and provide the response: AMB-WT
	The dot ( - ) means the specific alarm is not active
	If the index 'k' entered is not correct or the Area Monitor Compact is not present, the reply is: AMCK=ERR
<b>NOTE</b>	See §1.7.1 for User's Port HD-15 female connector pinout list .
SIDN i	This setting command sets the AMC's identifier. Its maximum length is 20 characters.
	The reply is the same as per ?IDN command.
	Example: <b>#LRSIDN Cisano</b> * which means that the Area Monitor name will become Cisano.

SKFR f	This setting command sets the frequency for flatness correction. Argument f represents the frequency in Hz at which the correction is to be applied, or 0 whenever it is desired to disable the correction. In the case of an Electric and Magnetic probe, both correction frequencies are set to the indicated value. These values will then be adapted according to the frequency limits of the probe itself and therefore may differ. Each time a probe is inserted, the frequency correction is automatically disabled. The reply is: KFR=OK in case the correction in frequency was set successfully KFR=NA in case the correction in frequency was not available Example: <b>#LRSKFR 1000000*</b> which enables the correction factor associated to the frequency of 1 MHz.
SLPF f	<ul> <li>This setting command sets the Low Pass Filter for the passive probes.</li> <li>The argument f must be between 0 and 3 and represents the index of the following list of available filters: <ul> <li>0: 10 Hz</li> <li>1: 20 Hz</li> <li>2: 40 Hz (default)</li> <li>3: 80 Hz</li> </ul> </li> </ul>
	The reply is: LPF=OK if the command has been granted LPF=ERR if the command has been refused Example: <b>#LRSLPF 2</b> * sets the filter to 40Hz, which is the fastest filter able to cut the disturbances coming from the mains network.
SLST	<ul> <li>This setting command activates or stops the Logger immediately.</li> <li>The argument I must be: <ul> <li>0: stops the Log immediately</li> <li>1: starts the Log immediately</li> </ul> </li> <li>Note: starting the Logger (I=1) causes the immediate deletion of the Log previously saved in memory. SLST 1 is equivalent to a prolonged pressure (longer than 5s) of the button.</li> <li>The Logger parameters must be set via the SAQ_ command before sending this starting command.</li> </ul>
	Example: <b>#LRSLST 1*</b> starts the Logger, deleting the previous saved one. The reply is: <b>LST=OK</b> if the SLST 1 command has been granted Example: <b>#LRSLST 0*</b> stop the Logger. The reply is: <b>LST=OK\r\nLog Ended – SLST 0</b> if the SLST 0 command has been granted The reply is:
	<b>LST=SERR</b> when issuing a SLST 0 command while the unit was not running in Logger mode.

SMSKm	This setting command sets the Alarms and Warnings mask. The mask must contain the mnemonic symbols that represent the individual alarms as shown in the following table. They can be written in any order. • W = Warning level exceeded; • A = ALARM threshold exceeded; • w = end of Warning situation; • a = end of Alarm situation; • P = Probe failure ALARM; • p = end of Probe Alarm; • V = Low Battery ALARM; • v = end of Low Battery Alarm; • T = OverTemperature ALARM; • U = USB connected Warning; • C = Relative Humidity ALARM; • L = Logger activation; • S = Alarm notification via serial port enable. Note: do not add the corresponding label to disarm any specific alarm. Adding the S symbol, any Alarm will be transmitted via the serial port (Optical, USB and Ethernet) formatted as the reply to ?STA command. If the LOGGER is active (AQ_ command), with the S label the binary data, relating to each single acquisition, will be sent to the serial port. Adding the L symbol, if the LOGGER is active, the alarm triggers the saving of the measurement record, either on a time basis (AQ_ with a rate greater than zero) or continuously (AQ_ with a rate of -1). Please, refer to ?STA command for reading alarm status. The reply is the same as per the ?MSK command.
	Examples: <b>#LRSMSK</b> * disarms all alarms and warnings; <b>#01SMSK</b> AV* tells Area Monitor Compact 01 to arm the Field level Alarm and the Low Battery Alarm.
SPWDp	<ul> <li>This setting command sets the password for the Wi-Fi connection. The security is under the standard WPA-PSK.</li> <li>p = alphanumeric password up to 64 characters long.</li> <li>The parameter is kept when the AMC is switched OFF.</li> <li>The reply PWD=OK indicates that the command has been granted.</li> <li>Example: #LRSPWDP@\$\$w0rd* which sets P@\$\$w0rd as the Wi-Fi password.</li> </ul>
SREBOOT	This setting command forces the AMC to reboot. Note: since the Area Monitor goes suddenly in reset procedure after having received the command, no direct reply is returned. During restart, the AMC outputs to the serial ports the results of the initial diagnostics. Example: <b>#LRSREBOOT</b> *

SRST	<ul> <li>This setting command restores the default configuration.</li> <li>The command resets the main parameters as follows: <ul> <li>All Alarms masked;</li> <li>Averaging period of 6 minutes;</li> <li>Running average cleared;</li> <li>Averaging type: RMS;</li> </ul> </li> <li>The reply RST=OK indicates that the command has been granted.</li> <li>Example: #LRSRST* restarts the unit.</li> </ul>
SRSTR	<ul> <li>This setting command restores the default configuration, logger rate included.</li> <li>The command resets the main and logger parameters as follows: <ul> <li>Logger rate of 6 minutes;</li> <li>All Alarms masked;</li> <li>Averaging period of 6 minutes;</li> <li>Running average cleared;</li> <li>Averaging type: RMS;</li> </ul> </li> <li>The reply "Reset to Default Factory Setting and Reboot" indicates that the command has been granted, and is followed by the restarting diagnostics.</li> </ul>
	Note: extreme attention must be used as this command invalidates any data already stored making them meaningless. Example: <b>#LRSRSTR*</b> resets the logger and restarts the AMC.
SSIDi	This setting command sets the Wi-Fi network name for wireless 802.11 b/g/n connection. it is an alphanumeric string, up to 64 characters long. The parameter is kept also when the AMC is switched OFF. The reply is: SID=OK if the command has been granted SID=ERR if the command has been refused Example: <b>#LRSSIDNardaWIFI*</b> which means that the SSID of the access point to connect to is NardaWIFI.
SSTSx (for EHP-2B model probe only)	Set the reference standard for EHP-2B probe The format is as follows: <b>#LRSSTSx*</b> where <b>X</b> is an index that goes from 1 to 4: "1" = Standard 1 (ICNIRP98OCC for EHP-2B-01/02/05/06 and ICNIRP2020OCC for 03/04/07/08) "2" = Standard 2 (ICNIRP98GP for EHP-2B-01/02/05/06 and ICNIRP2020GP for 03/04/07/08) "3" = Standard 3 (SC6CONTR for EHP-2B-01/02/05/06 and FCCCONTR for 03/04/07/08) "4" = Standard 4 (SC6UNCONTR for EHP-2B-01/02/05/06 and FCCUNCONTR for 03/04/07/08) Example <b>#LRSSTS1*</b> returns the response: <b>#LRSSTS=OK*</b> confirming that the EHP-2B probe is set to Standard 1. This index represents the reference standard for alarms, warnings, report and ?MES command response. The index is permanent and stored in the Flash. If the index entered is not correct, the response string is: <b>STS=SERR</b>

SWFIx	<ul> <li>This setting command switches the Wi-Fi module to the desired mode.</li> <li>The argument x can be as following: <ul> <li>x= ON: turns on the module and starts the connection procedure;</li> <li>x= OFF: closes any connection and turns off the module, including BLE;</li> <li>x = AP to make a Wi-Fi network where the AMC acts as an access point (SSID DEMO_AP, no password)</li> </ul> </li> </ul>
	SSID and password must be set before with commands SSID and SPWD.
	The reply is: WFI=OK if the command has been granted WFI=ERR if the command has been refused
	Example: <b>#LRSWFION</b> * which turns on the module and starts the connection
	Note: when the connection is established (parameter ON) the reply is followed by the IP address assigned to the AMC, as in the following example: <b>Wi-Fi IP is 192.168.0.9:6666</b>
	If the Wireless firmware release is older than 1.3.0, the reply is preceded by the string: ***WARNING LEGACY WIRELESS FIRMWARE***\r\n
SWRNs	This setting command sets the Warning threshold. Argument s is the threshold value, expressed in the current unit.
	When the connected probe is a EHP-2B-xx, it refers to the Magnetic Field. When the connected probe is a shaped model, the unit is %.
	The reply is the same as per ?WRN command.
	Example: <b>#LRSWRN19.9</b> * which means the new Warning threshold will be 19.9 in the current unit.
L	

10.5	Log	file
------	-----	------

### Header

The binary file begins with a 128 bytes header, structured as follows:

- first 8 bytes are always 0x4C 0x4F 0x47 0x5F 0x53 0x20 0x0D 0x0A [0-7]
- 24 bytes reporting the serial number of the AMC (if it is shorter, a zero-padding is performed) [8-31]
- 94 bytes showing the name of the probe (if it is shorter, a zeropadding is done) [32-126]
- 1 bytes for Logtype of the Logger [127]

The LogType byte [127] encloses all the setting information. A bit masking is needed to decode the settings, as follows: (LogType & 1) is for the averaging mode (LSB)

- 0: Average (AVG)
- 1: Root Mean Squared (RMS)

(LogType & 2) is for compact or extended records

- 0: compact Log with 32 bytes records
- 2: extended Log with 64 bytes records, including position and speed data

(LogType & 4) is for averaged/instantaneous value

- 0: Average
- 4: Instantaneous value

(LogType & 8) is the Alarm activation flag

- O: Log following an Alarm, disabled
- 8: Log following an Alarm, enabled

### Data

The Log file contains, from the 129th byte [128], the records made up of 32 (Compact Log) or 64 (Extended Log) bytes each. Every type of probe contains a specific data structure capable of expressing all the values measured during the log, recorded in the first 32 bytes. Please, refer to paragraph Log File Data for details. Any additional 32 bytes contain the position and speed data. Please, refer to the Additional GPS Structure description paragraph for details.

### End of Log file

The Log file ends with the checksum byte followed by the string "\r\nLOG\_E\r\n\r\n" (corresponding to 0x0D 0x0A 0x4C 0x4F 0x47 0x5F 0x45 0x0D 0x0A 0x0D 0x0A).

The checksum byte consists of the modulo 256 sum of the hexadecimal values of all the bytes sent, related to the data. In other words, all bytes that make up the measurement records, starting from [128] are added together.

### 10.5.1 Log file data

All figures in this document are **BIG ENDIANNESS.**

### 10.5.2 Field data

**Field data** are represented as 16 bit. Such a figure should be considered as a big-endian unsigned 15 bit integer multiplied by the typical probe divider (see dedicated **?PRB** command). In the particular case in which the figure is equal to **0xFFFF** then the value must be considered invalid (AMC was not able to get a measure) and all the data (all 32 bytes) are meaningless.

If, for example, 16 bit figure named **Tot\_avg** is 0x0244 and the divider 100 then the **RMS** (or AVG) field strength value related to broadband channel will be 5.80 (0x0244 in decimal notation is 580).

Most significant bit (D15) **INFL** flag gives the information whether in the period the measurement was influenced (Bit High) or not (Bit Low) by external cable or disturbing activity. Therefore it is not part of field strength and has to be masked.

Indeed, this is just a flag which informs that the measure could have been influenced by the system itself.

**Bit 15 is INFL** flag which informs the user that the measurement could have been **influenced** by a sum of external issues such as Wireless transmission, charging cable, USB cable & activity. **INFL** flag is the LR of all single flags which refer to its own disturbing part (see **PERTs** byte). Note that the presence of this flag informs the measurement can be heavily disturbed and thus could not be reliable at all.

**Battery** is the voltage of the battery. The number should be considered as an unsigned 8 bit integer. To get the correct value of the battery voltage the following formula is used: Volt = **Voltage**\*(0.132) If, for example, 8 bit figure named **Battery** is 0x1A (decimal 26) then the battery voltage will be 3.4 V

**Temp** is the Temperature recorded in the interval. The number should be considered as an unsigned 7 bit integer. In order to avoid negative figure an offset of 40 degrees centigrade is added thus, to get the correct value of the temperature, the following formula is used: T Centigrade = **Temp - 40**. SPR Flag is a reserved one and should be masked (for example **Temp & 0x7F**). If for example **.** 8 bit figure named **Temp** is 0x3f (decimal 63) then the temperature will be 23°C.

If, for example, 8 bit figure named **Temp** is 0x3f (decimal 63) then the temperature will be 23°C

Alarm is the block of alarms recorded in the interval. Each bit should be considered individually as follows:

- Bit D07 When High it flags that the battery voltage was out of the safe limits.
- Bit D06 When High it flags that the relative humidity is out of working range.
- Bit D05 When High it flags that the temperature was out of working range.
- Bit D04 When High it flags that the USB cable was connected.
- Bit D03 Reserved
- Bit D02 When High it flags that a Probe failure was detected.
- Bit D01 When High it flags that the broadband field value overcame Warning threshold.
- Bit D00 When High it flags that the broadband field value overcame Alarm threshold.

**PERT** is the block of every single perturbing occurrence recorded in the interval. Each bit should be considered individually as follows:

- Bit D07 Reserved
- Bit D06 Reserved
- Bit D05 Reserved
- Bit D04 Reserved
- Bit D03 Reserved
- Bit D02 When High it flags that the USB connection was ON during sampling.
- Bit D01 When High it flags that the external Charger was connected by cable during sampling.
- Bit D00 Reserved

Note that the presence of one of the above flags indicates that the record has been perturbed by external influence and the result, in the best case, could be unreliable.

Figures **MISC** and **DateTimes** must be read together.

Command protocol

The 16 bit figure named **MISC** is shown as follows:

	D07	D06	D05	D04	D03	D02	D01	D00	D07	D06	D05	D04	D03	D02	D01	D00
MISC	Re	AVGPerio		NC	DВ				•							
Byte	ser	d_Dec		AVGPeriod Min				MONTHS								
13/14	ved	2 bit	uint	lint		4 bit	unsign	ed int	eger		7	' bit un	signed	d integ	er	

This figure ( MISC ) should be considered as four different data as follows:

- Reserved. The Most significant bit is reserved.
- **AVGPeriod\_Dec** is a 2 bit unsigned integer which shows the decimal part of the interval value related to the time span used to get the average (RMS or AVG). This figure is expressed in 15s, i.e., 01 means 15s.
- **NOB** is a 2 bit unsigned integer which informs how many bands (fields for EHP2B) are present in the record.
- **AVGPeriod Min** is a 4 bit unsigned integer which shows the interval (expressed in minute) related to the time span used to get the average (RMS or AVG). An exception is AVGPeriod = 0 in which case the averaging time is 30 minute.
- **MONTHS** is a 7 bit unsigned integer which indicates how many months have been elapsed since 1<sup>st</sup> January 2022. Being the range limited to 127 the overlapping period is more than 10 years.

If, for example,  $\ensuremath{\textbf{MISC}}$  is  $\ensuremath{\textbf{0x0083}}$  then the meaning will be:

- AVGPeriod=1 (1 minute). Indeed ( 0x0083 >> 7 ) & 0xF = 0x01
- MONTHS =3 (April 2022). Indeed **0x0083 & 0x7F = 0x03**

The 16 bit figure named **DateTime** is shown as follows:

	MI1 5	MI1 4	MI1 3	MI1 2	MI1 1	MI1 0	MI9	MI8	MI7	MI6	MI5	MI4	MI3	MI2	MI1	MI0
DateTime																
Byte 15/16							Da	ateTin	ne							

**DateTime** should be considered as a big-endian unsigned 16 bit integer and indicates how many minutes have been elapsed since the beginning of the current month (previous MONTHS data).

If, for example, **DateTime** is 0x95AE (decimal 38318) then the record will be related to the 27<sup>th</sup> of the month at 14:38.

Indeed :

 $\begin{array}{l} \text{Day} = 1 + \text{Int}(\textbf{DateTime} \ / \ 1440) = 1 + \text{Int} \ ( \ 38318 \ / \ 1440 \ ) = 27 \\ \text{Hour} = \text{Int}((\textbf{DateTime} \ \text{Mod} \ (1440)) \ / \ 60) = \text{Int} \ ( \ ( \ 38318 \ \text{Mod} \ (1440 \ ) \ ) \ / \ 60 \ ) = 14 \\ \text{Minute} = (\textbf{DateTime} \ \text{Mod} \ (1440)) \ \text{Mod} \ 60) = ( \ 38318 \ \text{Mod} \ ( \ 1440 \ ) \ ) \ \text{Mod} \ 60 \ ) = 38 \\ \end{array}$ 

Merging the data with **MONTHS** we can get the full date of acquisition which is 14:38 27/04/2022. Time indications with second resolution is given in **Seconds**.

**Altitude** value is the relative Altitude and is expressed in m. This value is referred to the altitude measured when the log has started. The number should be considered as a 16 bit integer.

**Seconds** represent the time in seconds (modulo 60) at which the log has been saved. The number should be considered as an unsigned 8 bit integer.

**RH** value is the relative Humidity and is expressed in percent . The number should be considered as an unsigned 8 bit integer.

If, for example, 8 bit figure named **RH** is 0x32 (decimal 50) then the value of RH would be 50%

Figures Standard [byte 18] reflects the standard used (same as ?WMEi command)

Accele	ration Z	RES	RES	Spee	ed	Reserved				
Hi	Lo	Hi	Lo	Hi	Lo	Hi	Lo			
Byte 41	Byte 42	Byte 43	Byte 44	Byte 45	Byte 46	Byte 47	Byte 48			
	• •			•			· · ·			
Latitu	ude int	Latitud	e Fract	Longitue	de int	Longitude Fract				
degree	minute	Hi	Lo	degree minut		Hi	Lo			

MSL A	Altitude	Hea	ding	RES	RES	RES	RES
Hi	Lo	Hi	Lo				
Byte 57	Byte 58	Byte 59	Byte 60	Byte 61	Byte 62	Byte 63	Byte 64

Byte 53

**Validity** represents data validity – **0**:Valid **Else**:Unvalid.

Acceleration X, Y, Z expressed in hundreths of [g]. For Accelerometer axes orientation see §2.7

Byte 54

Byte 55

Byte 56

**Speed** value is expressed in tenths of knoots, must be divided by 10 to get the speed in [kn]

### Position information next page

Byte 52

Byte 51

**MSL Altitude** is the Mean Sea Level Altitude in tenths of meter, must be divided by 10 to get the altitude in [m]

**Heading** is the direction in tenths of degree, so  $0^\circ$  (or  $360^\circ$ ) indicates a direction toward North

### 10.5.3.1 Position Information

The 16 bit figure named Latitude int is shown as follows:

Byte	Degree	N/S	۷	Minute
49/50				

The figure named **Latitude int** is made of 4 fields and represents the integer part of the GPS Latitude.

- **Degree** is a 8 bit unsigned integer which indicates the degree of latitude.
- **N/S** (D7) is a flag which indicates whether the latitude is North or South. When referred to North N/S=0 while if N/S=1 the latitude is South.
- **V** (D6) is a flag, which indicates whether data is valid, or not. When coordinates are valid V=0. When V=1 the GPS was not able to correctly get the position.
- Minute is a 6 bit unsigned integer which indicates the minute integer part of latitude.

### The 16 bit figure named Latitude Fract is shown as follows:

	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Byte		Ten thousandths of a minute														
51/52																

The figure named **Latitude Fract** is a **<u>Big</u>-endian** unsigned 16 bit integer and indicates the fractionary part of the GPS Latitude and it is expressed in Ten-thousandths of a minute.

Merging the previous data Latitude int and this figure the full latitude can be obtained.

If, for example, Latitude int=0x2c04 and Latitude Fract=0x12a9 then the GPS latitude would be: 44 degree, 04.4777 minute North.

Indeed, 0x2c=44, 0x04=04 and 0x12a9=4777. N/S is 0 then the latitude is North.

### The 16 bit figure named Longitude int is shown as follows:

Byte	Degree	E/W	res	Minute
53/54	-			

The figure named **Longitude int** is made of 4 fields and represents the integer part of the GPS Longitude.

- **Degree** is a 8 bit unsigned integer which indicates the degree of latitude.
- E/W (D7) is a flag which indicates whether the Longitude is East or West. When referred to East E/W=0 while if E/W=1 the Longitude is West.
- **D6** is reserved and have to be masked out.
- **Minute** is a **6 bit** unsigned integer which indicates the minute integer part of Longitude.

### The 16 bit figure named Longitude Fract is shown as follows:

	D15	D14	D13	D12	D11	D10	D9	D8	D7	D6	D5	D4	D3	D2	D1	D0
Byte						Te	n tho	usanc	Iths of	f a mi	nute					
55/56																

The figure named **Longitude Fract** is a **<u>Big</u>-endian** unsigned 16 bit integer and indicates the fractionary part of the GPS Longitude and it is expressed in Ten-thousandths of a minute.

Merging the previous data Longitude int and this figure the full Longitude can be obtained.

If, for example, **Longitude int=0x0809** and **Longitude Fract=0x16b3** then the GPS Longitude would be: 8 degree, 09.4777 minute East.

Note that position is valid only when **Flag V** of **Latitude int** is zero.

10-38

Command protocol

# 11 - Accessories

11.1 Introduction	This section provides information required for installing and using accessories of the SMARTS AMC Area Monitor Compact. Information is included regarding initial inspection, power requirements, interconnections, work environment, assembly, cleaning, storage and shipment. The following general information is applicable to all accessories.						
11.2 Preliminary	Inspect the packaging for any damage.						
inspection NOTICE	If the packaging or anti-shock material have been damaged, check that the contents are complete and that the product has not suffered electric or mechanical damage. Check that all the Accessories are there against the checklist found with the apparatus. Inform the carrier and NARDA of any damage that has occurred.						
11.3 Work environment	<ul> <li>Unless otherwise specified, the work environment of the Accessories, must come within the following conditions:</li> <li>Temperature From -20°C to +55° C (0°C to 40°C for Battery Charger)</li> <li>Humidity From 5 to 95% relative</li> </ul>						
	<ul> <li>The Accessories must be stored in a clean and dry environment, free from dust, acids and humidity.</li> <li>The storage environment must come within the range of the following conditions:</li> <li>Temperature From -30°C to + 75°C (-20°C to 60°C for Battery Charger)</li> <li>Humidity &lt; 95% relative</li> </ul>						
11.4 Return for repair	When the Accessories need to be returned to NARDA for repair, please complete the questionnaire appended to this User's Manual, filling in all the data that will be useful for the service you have requested.						
	For reducing the period of time required for the repairs, it is necessary to be as specific as possible in describing the problem. If the problem only occurs in certain circumstances, please describe in detail how it happens. If possible it is better to reuse the original packaging; making sure that the apparatus is wrapped in thick paper or plastic. Otherwise, use strong packaging by using a sufficient quantity of shock absorbent material around all sides of the product to ensure that it is compact and does not move around inside the package. In particular, take every precaution to protect the front and rear Main unit panels, Wall support bracket, Interface and Radome. Finish the package by sealing it up tightly. Apply a FRAGILE label to the package to encourage greater care in its handling.						
11.5 Cleaning	Use a dry, clean and non-abrasive cloth for cleaning the instruments.						
NOTICE	Do not use solvents, acids, turpentine, acetone or other similar products for cleaning the devices in order to avoid damaging them.						

Accessories

## USB-OC Optical USB Converter

11.6.1 Introduction

11.6.2 Installation

 $\ensuremath{\mathsf{USB}}\xspace{-}\ensuremath{\mathsf{OC}}\xspace$  is a standard accessory of the SMARTS AMC Area Monitor Compact.

It converts the signals of some of the system's accessories, which are only connected via fiber optic, into USB-compatible signals. It, therefore, makes it possible to link the following items up to the USB port of any Personal Computer to operate them in conjunction with specific application software and for firmware updating.

Either USB-OC or USB cable is indispensable for updating the internal firmware via a Personal Computer and update software is available on NARDA's Web site at: <u>http://www.narda-sts.it</u>

Insert USB-OC in the connector of a free USB port of the PC, connect the fiber optic coming from the AMC or other accessories paying attention to the locating key.

Considering the very low consumption of the device, the power required by USB-OC is taken directly from the USB port of the PC. This means no maintenance is needed.

Table 11-1 Technical specifications of the USB-OC Optical USB Converter				
Max. length of the fiber optic	40 m (standard 10 m; 2 to 40 m optional)			
USB Connector	Type A Male			

The link between USB-OC and a HUB USB device or USB cable extension could not work properly. It is advisable to connect the USB-OC directly to the PC.

## TR-02A Tripod

### 11.7.1 Introduction

11.7

TR-02A is an Optional Accessory of the SMARTS AMC Area Monitor Compact. It allows AMC to be easily supported during field measurements. Each of these instruments has a securing screw, usually placed on the bottom part of its container that enables it to be easily and quickly put into place through the 8053-SN swivel supplied with the tripod.

# The design and materials of the TR-02A tripod have been specially selected to prevent it from disturbing the sensors and, therefore, the measurements taken.

The height of the tripod can be adjusted by means of its extendable legs and it is furnished with special feet that are able adapt to all surfaces thereby improving stability. The height of its central support can also be adjusted.

It is supplied with a small protective carrybag to make it easy to carry.

Details of the mounting head of the central column of the support and its adjustments:

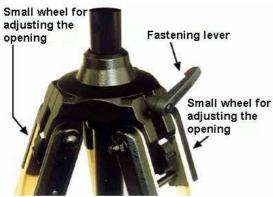

Fig. 11-2 TR-02A Tripod

The angle for opening each leg into three different positions can be adjusted by using special small adjustable wheels:

- fixed opening of 20°: White adjustment indicator is visible (as in the Figure);
- fixed opening of 45°: Red adjustment indicator is visible;
- variable opening: no indicator is visible.

The central support can be adjusted and blocked by means of a special fastening lever.

Details of the swivel for fastening to the Tripod Joint:

- full height: 8 cm ٠
- weight: 160 g ٠
- load capacity: 10 kg •
- Threaded insert 1/4" •

The adjustable swivel makes mounting and fastening the instrument easy as well as changing the angle in any directions via the locking knob.

Fig. 11-3 AMC on the TR-02A Tripod

11.8

# AC/DC USB Power Supply and battery charger

11.8.1 Introduction

Wall plug regulated switchmode AC/DC power supply is a standard accessory of the SMARTS AMC Area Monitor Compact. It is provided with the USB(A)/USB(C) cable to supply the AMC and for charging the internal battery.

This is a Class II / Double insulated device for indoor use only.

Please, adopt the terminal suitable for your Country, following the brief instructions in the picture.

## PoE Injectior

11.9.1 Introduction

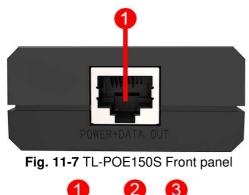

11.9

The Power Over Ethernet, such as TL-POE150S or equivalent products is an Optional Accessory of the SMARTS AMC Area Monitor Compact. It delivers power, data and network connection over the same cable to the SMARTS AMC Area Monitor Compact throught the Ethernet port available on the bottom of the AMC baseplate.

# 12 – Service

**12.1 Miscellaneous** There are some messages that are generated automatically in specific circumstances.

When the GPS module does not respond, the unit sends the string:

### **GPS Not Available**

If Area Monitor Compact is not supplied by USB-C cable or PoE Injector and the internal battery voltage is low, the SMARTS AMC sends the string:

### WRN: Low Battery

If Area Monitor Compact is not supplied by USB-C cable or PoE Injector and the internal battery voltage is below 3.0 V, the SMARTS AMC sends the string:

### \*\*\*VOID BATTERY\*\*\* switching off

Then, the SMARTS AMC is turned off.

If Area Monitor Compact is not supplied by USB-C cable or PoE Injector and does not receive any command for 30 minutes, and the Logger is not enabled, the AMC sends the string:

### \*\*\*No ACTIVITY\*\*\* switching off

Then, the SMARTS AMC is turned off.

Document SMARTSAMCEN-40505-3.09 - © NARDA 2024

**12.2 Initial diagnostic** Just after turning on the AMC, it sends automatically the initial diagnostic results during the boot sequence. The ASCII text is self-explained.

The following is an example where an Electric and Magnetic probe is connected to the AMC Area Monitor Compact.

### Caro cliente

grazie per aver acquistato un prodotto NARDA! Sei in possesso di uno strumento che per molti anni ti garantirà un'alta qualità di servizio. NARDA riconosce l'importanza del Cliente come ragione di esistenza; ciascun commento e suggerimento, sottoposto all'attenzione della nostra organizzazione, è tenuto in grande considerazione. La nostra qualità è alla ricerca del miglioramento continuo. Se uno dei Suoi strumenti NARDA necessita di riparazione o calibrazione, può aiutarci a servirla più efficacemente compilando questa scheda e accludendola all'apparecchio.

Tuttavia, anche questo prodotto diventerà obsoleto. In questo caso, ti ricordiamo che lo smaltimento dell'apparecchiatura deve essere fatto in conformità con i regolamenti locali. Questo prodotto è conforme alle direttive WEEE dell'Unione Europea (2002/96/EC) ed appartiene alla categoria 9 (strumenti di controllo). Lo smaltimento, in un ambiente adeguato, può avvenire anche attraverso la restituzione del prodotto alla NARDA senza sostenere alcuna spesa. Può ottenere ulteriori informazioni contattando i venditori NARDA o visitando il nostro sito Web www.narda-sts.it.

#### **Dear Customer**

thank you for purchasing a NARDA product! You now own a high-quality instrument that will give you many years of reliable service. NARDA recognizes the importance of the Customer as reason of existence; in this view, any comment and suggestion you would like to submit to the attention of our service organization is kept in great consideration. Moreover, we are continuously improving our quality, but we know this is a never ending process. We would be glad if our present efforts are pleasing you. Should one of your pieces of NARDA equipment need servicing you can help us serve you more effectively filling out this card and enclosing it with the product.

Nevertheless, even this product will become obsolete. When that time comes, please remember that electronic equipment must be disposed of in accordance with local regulations. This product conforms to the WEEE Directive of the European Union

(2002/96/EC) and belongs to Category 9 (Monitoring and Control Instruments). You can return the instrument to us free of charge for proper environment friendly disposal. You can obtain further information from your local NARDA Sales Partner or by visiting our website at <u>www.narda-sts.it</u>.
