- Automatic arc calibration

FSM-17S Fusion Splicer

The FSM-17S establishes a new standard for single fiber "fixed v-groove" type fusion splicers with a host of improvements including a 35 second tube heater, dual position monitor, and a longer battery life. The real time arc calibration feature makes field maintenance easier than ever. Also available now is a version of the FSM-17S utilizing a fiber holder system, making the splicing process extremely simple for inexperienced technicians. The FSM-17S is well suited for FTTX applications and both models quickly attach to the newly redesigned ASW-02 workstation making, field portability a breeze.
